ACTUAL TESTS

Designing for Cisco Internetwork Solutions

Version: 30.3
Cisco 200-310 Exam

Exam A

QUESTION 1
You want to gather as much detail as possible during a network audit, to include data time stamping across a large number of interfaces, customized according to interface, with a minimal impact on the network devices themselves. Which tool would you use to meet these requirements?

A. RMON
B. SNMPv3
C. NetFlow
D. Cisco Discovery Protocol

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:
Explanation:

NetFlow provides extremely granular and accurate traffic measurements and a high-level collection of aggregated traffic. The output of netflow information is displayed via the show ip cache flow command on routers. The Table shows a description of the fields for NetFlow output.

Table. Netflow Output escription

Field	Description
Bytes	Number of bytes of memory that are used by the NetFlow cache
Active	Number of active flows
Inactive	Number of flow buffers that are allocated in the Netflow cache
Added	Number of flows that have been created since the start of the summary
Exporting flows	IP address and UDP port number of the workstation to which flows are exported
Flows exported	Total number of flows export and the total number of UDP datagrams
Protocol	IP protocol and well-known port number
Total Flows	Number of flows for this protocol since the last time that statistics were cleared
Flows/sec	Average number of flows this protocol per second
Packets/flow	Average number of packets per flow per second
Bytes/pkt	Average number of bytes for this protocol
Packets/sec	Average number of packets for this protocol per second

QUESTION 2
Which protocol is used for voice bearer traffic?

A. MGCP
B. RTP
C. SCCP
D. CDP
E. ICMP

Correct Answer: B
**Section: (none)**
Explanation

Explanation/Reference:
Explanation:

VoIP Control and Transport Protocols

A number of different protocols are used in a VoIP environment for call control, device provisioning, and addressing.

Figure 14-15 shows those protocols focused on VoIP control and transport.

QUESTION 3
Which protocol is used to reserve bandwidth for the transport of a particular application data flow across the network?

A. cRTP
B. IEEE 802.1P
C. RSVP
D. LFI
E. Auto QOS

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:
Explanation:

RSVP Signaling protocol that enables end stations or applications to obtain guaranteed bandwidth and low delays for their data flows.

QUESTION 4

Which two features are supported by single wireless controller deployments? (Choose two.)

A. automatic detection and configuration of LWAPPs
B. LWAPP support across multiple floors and buildings
C. automatic detection and configuration of RF parameters
D. Layer 2 and Layer 3 roaming
E. controller redundancy
F. mobility groups

Correct Answer: AB
Section: (none)
Explanation

Explanation/Reference:
"Pass Any Exam. Any Time." - www.actualtests.com 10
Cisco 200-310 Exam

Explanation:

QUESTION 5
Which four services does the architecture for Media Services contain? (Choose four.)

A. access services
B. transport services
C. storage services
D. forwarding services
E. session control services
F. security services
G. filtering services
H. remote access services

Correct Answer: ABCE
Section: (none)
Explanation

Explanation/Reference:
Explanation:

An architecture framework for media services supports different models of video models. As shown in Figure 14-13, the network provides service to video media in the Media Services Framework. Those services are access services, transport services, bridging services, storage servers, and session

control services, which arc provided to endpoints.

"Pass Any Exam. Any Time." - www.actualtests.com 11
Cisco 200-310 Exam

Figure 14-13 *Media Services Architectural Framework*

QUESTION 6
Refer to the exhibit.

"Pass Any Exam. Any Time." - www.actualtests.com 12
Cisco 200-310 Exam
Which layer is the distribution layer?

A. Layer A
B. Layer B
C. Layer C
D. Layers A and B form a consolidated core and distribution layer

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 7
Which IPv6 feature enables routing to distribute connection requests to the nearest content server?

A. Link-local
B. Site-local
C. Anycast
D. Multicast
E. Global aggregatable

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:
Explanation:

Any cast is a network addressing and routing methodology in which data grams from a single "Pass Any Exam. Any Time." - www.actualtests.com 13
Cisco 200-310 Exam
sender are routed to the topologically nearest node in a group of potential receivers all identified by the same destination address.

Link: http://en.wikipedia.org/wiki/Anycast

QUESTION 8
What is the recommended spanning tree protocol to use for all Layer 2 deployments in a branch office environment?

A. CST
B. RSPT
C. PVST
D. MISTP
E. Rapid PVST +
Correct Answer: E
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 9
Refer to the exhibit.

Cisco 200-310 Exam

A standard, Layer 2 campus network design is pictured. Which numbered box represents the distribution layer?

A. #1
B. #2
C. #3
D. #4

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:
Explanation:

"Pass Any Exam. Any Time." - www.actualtests.com 15
Cisco 200-310 Exam

QUESTION 10
Which two are types of network virtualization? (Choose two.)

A. VSS: Virtual Switching System
B. VRF: virtual routing and forwarding
C. VCI: virtual channel identifier
D. VLSM: variable length subnet masking
E. VM: virtual machine
F. VMP: Virtual Memory Pool

Correct Answer: AB
Section: (none)
Explanation

Explanation/Reference:
Explanation:

Network virtualization encompasses logical isolated network segments that share the same physical infrastructure. Each segment operates independently and is logically separate from the other segments. Each network segment appears with its own privacy, security, independent set of policies, QoS levels, and independent routing paths.

Here are some examples of network virtualization technologies:

VLAN: Virtual local-area network

VSAN: Virtual storage-area network

VRF: Virtual routing and forwarding

VPN: Virtual private network

VPC: Virtual Port Channel

QUESTION 11
You are tasked with designing a new branch office that will support 75 users with possible expansion in the future and will need a highly available network. Which of the branch design profiles should be implemented?

A. large branch design
B. medium branch design
C. teleworker design
D. small branch design

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:
Explanation:

Medium Branch Design

The medium branch design is recommended for branch offices of 50 to 100 users, which is similar to the small branch but with an additional access router in the WAN edge (slightly larger) allowing for redundancy services. Typically, two 2921 or 2951 routers are used to support the WAN, and separate access switches are used to provide LAN connectivity.

QUESTION 12
Which two can be used as a branch office WAN solution? (Choose two.)

A. frame relay
B. MPLS
C. Metro Ethernet

D. GPRS
E. dial-up modem
F. 3G USB modems

Correct Answer: BC
Section: (none)
Explanation

Explanation/Reference:
Explanation:

Explanation

Frame relay is old 'shared' technology today's sites use some flavor or Metro E or MPLS/VPN

QUESTION 13
What is the acceptable amount of one-way network delay for voice and video applications?

A. 300 bytes
B. 1 sec
C. 150 ms
D. 500 ms

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:
Explanation:

Delay Components in VoIP Networks

The ITU's G.I 14 recommendation specifics that the one-way delay between endpoints should not exceed 150 ms to be acceptable, commercial voice quality. In private networks, somewhat longer delays might be acceptable for economic reasons. The ITU G.114 recommendation specifics that 151-ms to 400-ms one-way delay might be acceptable provided that organizations are aware that the transmission time will affect the quality of user applications. One-way delays of above 400 ms "Pass Any Exam. Any Time." - www.actualtests.com 18
Cisco 200-310 Exam
are unacceptable for general network planning purposes.

QUESTION 14
Which mode is used to exclusively look for unauthorized access points?

A. monitor mode
B. sniffer mode
C. rogue detector mode
D. local mode

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:
Explanation:

AP Mode	Description
Monitor mode	
Rogue Detector mode	
Sniffer mode	
Bridge mode	

Interference detection and avoidance: As Cisco LWAPs monitor all channels, interference is

"Pass Any Exam. Any Time." - www.actualtests.com 19
Cisco 200-310 Exam
detected by a predefined threshold (10 percent by default). Interference can be generated by rogue APs, microwaves, cordless telephones, Bluetooth devices, neighboring WLANs, or other electronic devices.

QUESTION 15
Which of the following three options represents the components of the Teleworker Solution? (Choose three.)

A. Cisco Unified IP Phone
B. Cisco 880 Series Router

C. Aironet Office Extend Access Point

D. Catalyst 3560 Series Switch

E. Cisco 2900 Series Router

F. MPLS Layer 3 VPN

G. Leased lines

Correct Answer: ABE
Section: (none)
Explanation

Explanation/Reference:
Explanation:

A Cisco ASR is used to terminate Teleworker solutions, not a 2900 series router.

Hybrid teleworker uses Aironet, Advanced teleworker uses 880, both use IP phones.

google: "at_a_glance_c45-652500.pdf" for details

The Cisco Virtual Office Solution for the Enterprise Teleworker is implemented using the Cisco 800 series ISRs. Each ISR has integrated switch ports that then connect to the user's broadband connection. The solution uses a permanent always-on IPsec VPN tunnel back to the corporate "Pass Any Exam. Any Time." - www.actualtests.com 20
Cisco 200-310 Exam
network. This architecture provides for centralized IT security management, corporate-pushed security policies, and integrated identity services. In addition, this solution supports the enterprise teleworker needs through advanced applications such as voice and video. For example, the enterprise teleworker can take advantage of toll bypass, voicemail, and advanced IP phone features not available in the PSTN.

Enterprise Teleworker Module

The enterprise teleworker module consists of a small office or a mobile user who needs to access services of the enterprise campus. As shown in Figure 2-14, mobile users connect from their homes, hotels, or other locations using dialup or Internet access lines. VPN clients are used to allow mobile users to securely access enterprise applications. The Cisco Virtual Office solution provides a solution for teleworkers that is centrally managed using small integrated service routers (ISR) in the VPN solution. IP phone capabilities are also provided in the Cisco Virtual Office solution, providing corporate voice services for mobile users.

Services
QUESTION 16
Which three types of WAN topologies can be deployed in the Service Provider Module? (Choose three.)

A. ring
B. star
C. full mesh
D. core/edge
E. collapsed core
F. partial mesh

Correct Answer: BCF
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 17
DRAG DROP

DRAG DROP

Drag the WAN characteristics on the left to the branch office model where it would most likely to be used on the right.

Drag the WAN characteristics on the left to the branch office model where it would most likely to be used on the right.

Redundant devices
MPLS Deployment model
Redundant Links
Redundant Links and Devices
Private WAN deployment
Internet Deployment Model

Small Office

Medium Office

Large Office

Cisco 200-310 Exam

A.
B.
C.
D.

Correct Answer:
Section: (none)
Explanation

Explanation/Reference:

Drag the WAN characteristics on the left to the branch office model where it would most likely to be used on the right.

	Small Office
Redundant devices	Redundant Links
MPLS Deployment model	Internet Deployment Model
	Medium Office
Redundant Links	Redundant devices
Redundant Links and Devices	Private WAN deployment
	Large Office
Private WAN deployment	Redundant Links and Devices
Internet Deployment Model	MPLS Deployment model

Explanation:

Small Branch Design

The small branch design is recommended for branch offices that do not require hardware redundancy and that have a small user base supporting up to 50 users. This profile consists of an access router providing WAN services and connections for the LAN services.

The Layer 3 WAN services are based on the WAN and Internet deployment model. A T1 is used for the primary link, and an ADSL secondary link is used for backup. Other network fundamentals are supported, such as EIGRP, floating static routes, and QoS for bandwidth protection.

Medium Branch Design

The medium branch design is recommended for branch offices of 50 to 100 users, which is similar to the small branch but with an additional access router in the WAN edge (slightly larger) allowing for redundancy services.

Large Branch Design

The large branch design is the largest of the branch profiles, supporting between 100 and 1000 users. This design profile is similar to the medium

branch design in that it also provides dual access routers in the WAN edge. In addition, dual Adaptive Security Appliances (ASA) are used for stateful firewall filtering, and dual distribution switches provide the multilayer switching component. The WAN services use an MPLS deployment model with dual WAN links into the WAN cloud.

Cisco Press CCDA 640-864 Official Certification Guide Fourth Edition, Chapter 7

Cisco 200-310 Exam

QUESTION 18
Which statement describes the recommended deployment of DNS and DHCP servers in the Cisco Network Architecture for the Enterprise?

A. Place the DHCP and DNS servers in the Enterprise Campus Access layer and Enterprise branch.
B. Place the DHCP and DNS servers in the Enterprise Campus Server Farm layer and Enterprise branch.
C. Place the DHCP server in the Enterprise Campus Core layer and Remote Access_VPN module with the DNS server in the Internet Connectivity module.
D. Place the DHCP server in the Enterprise Campus Distribution layer with the DNS server in the Internet Connectivity module.
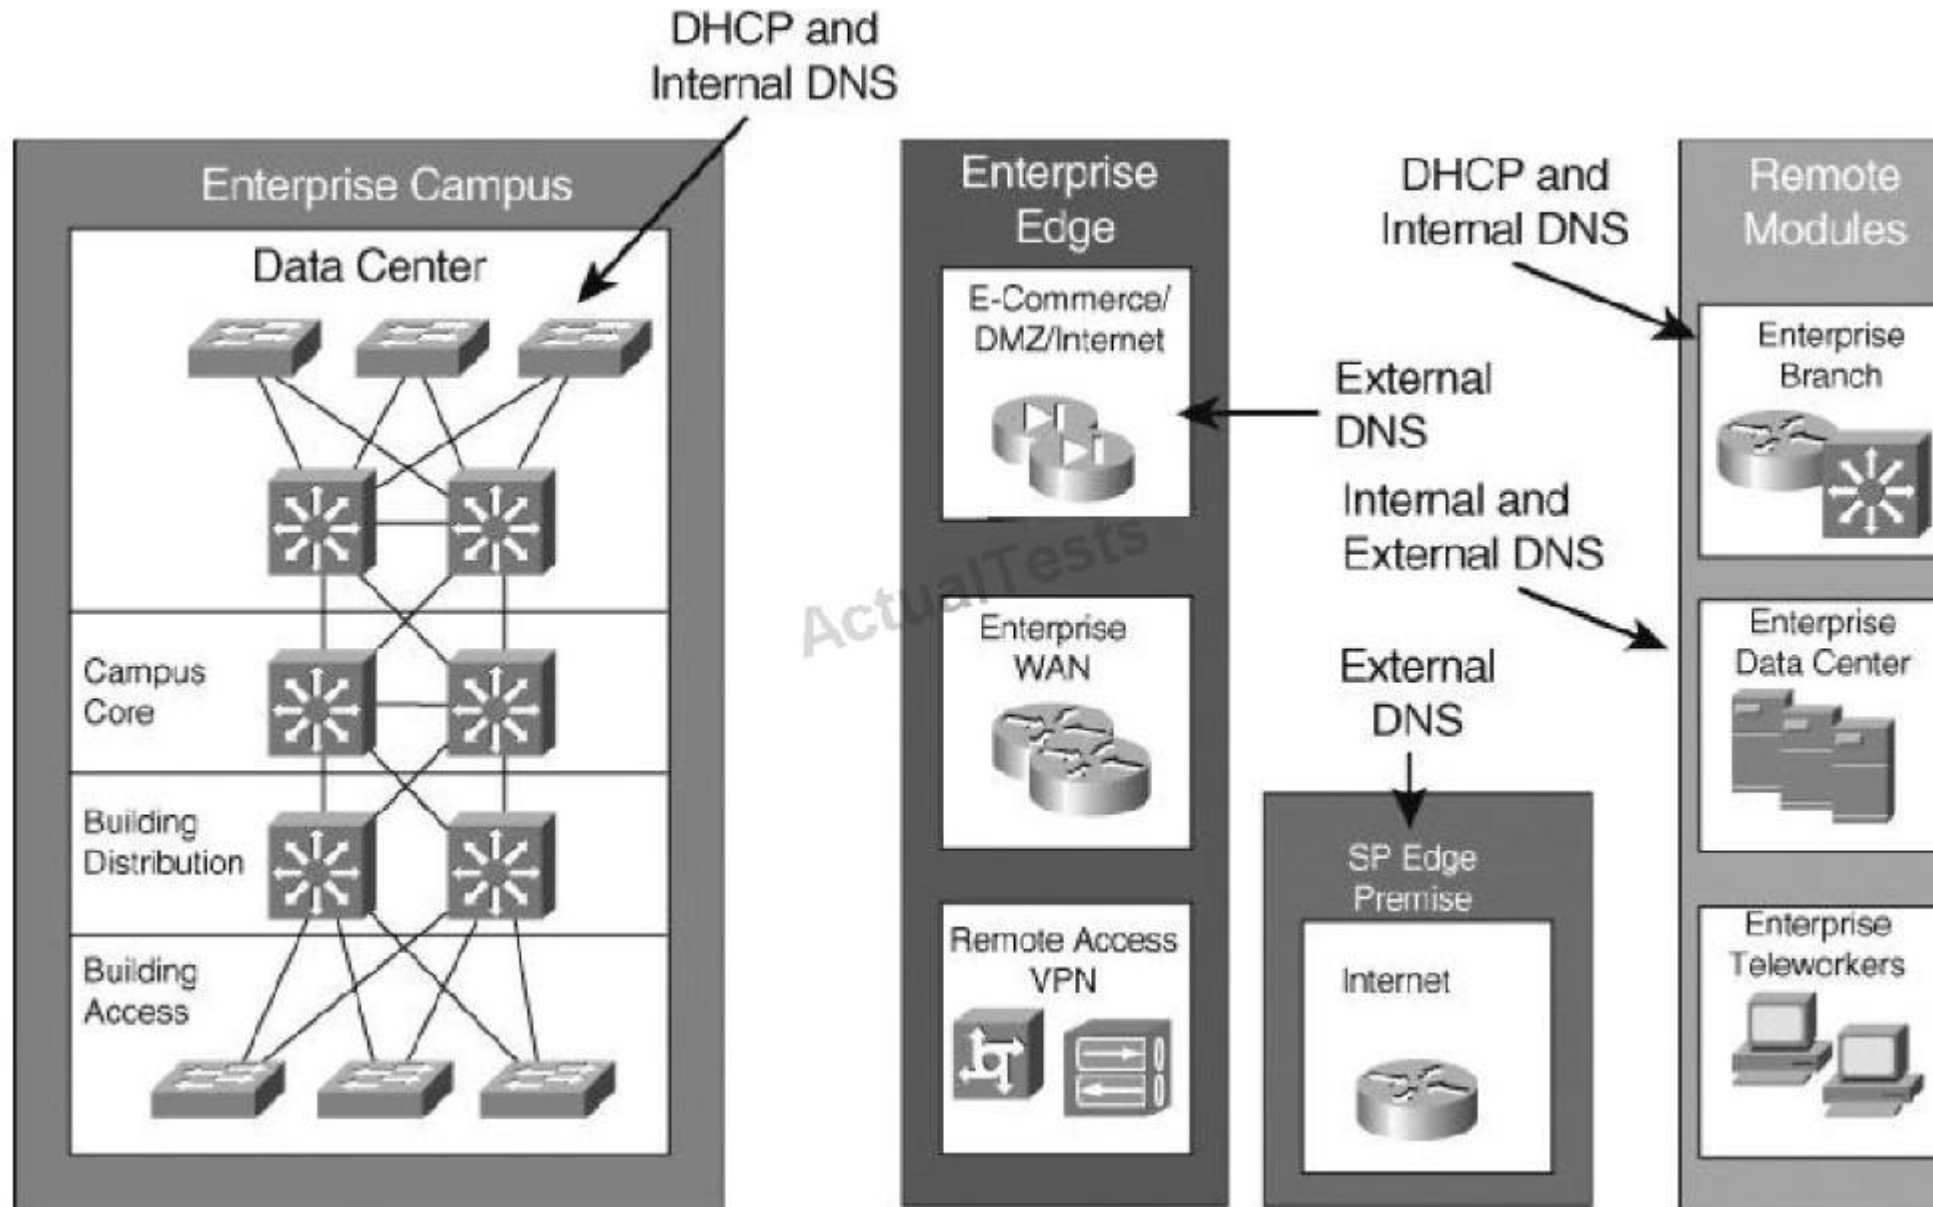

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:
Explanation:

For the Enterprise Campus, DHCP and internal DNS servers should be located in the Server Farm and they should be redundant. External DNS servers can be placed redundantly at the service provider facility and at the Enterprise branch.

QUESTION 19
Your company's Cisco routers are operating with EIGRP. You need to join networks with an acquisition's heterogeneous routers at 3 sites, operating with EIGRP and OSPF. Which describes the best practice for routing protocol deployment?

A. Apply OSPF throughout both networks
B. Apply one-way redistribution exclusively at each location
C. Apply two-way redistribution exclusively at each location
D. Apply two-way redistribution at each location with a route filter at only one location
E. Apply two-way redistribution at each location with a route filter at each location
F. Apply EIGRP with the same autonomous system throughout both networks

Correct Answer: E
Section: (none)
Explanation

Explanation/Reference:
Explanation:

Without filters there is possibility of routing loops.

Link: http://www.cisco.com/en/US/tech/tk365/technologies_tech_note09186a008009487e.shtml

QUESTION 20
Which two routing protocols converge most quickly? (Choose two.)

"Pass Any Exam. Any Time." - www.actualtests.com 25
Cisco 200-310 Exam

A. RIPv1
B. RIPv2
C. BGP
D. OSPF
E. EIGRP

Correct Answer: DE
Section: (none)
Explanation

Explanation/Reference:

Explanation:

QUESTION 21
Which of these is the equation used to derive a 64 Kbps bit rate?

A. 2 x 8 kHz x 4-bit code words
B. 8 kHz x 8-bit code words
C. 2 x 4-bit code words x 8 kHz
D. 2 x 4 kHz x 8-bit code words

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:
Explanation:

While the human ear can sense sounds from 20 to 20, 000 Hz, and speech encompasses sounds from about 200 to 9000 Hz, the telephone channel was designed to operate at about 300 to 3400 Hz. This economical range carries enough fidelity to allow callers to identify the party at the far end and sense their mood. Nyquist decided to extend the digitization to 4000 Hz, to capture higher-

"Pass Any Exam. Any Time." - www.actualtests.com 26
Cisco 200-310 Exam
frequency sounds that the telephone channel may deliver. Therefore, the highest frequency for voice is 4000 Hz. According to Nyquist theory, we must double the highest frequency, so 2x4kHz = 8kHz.

Each sample will be encoded into a 8-bit code. Therefore 8kHz x 8-bit code = 64 Kbps (notice about the unit Kbps: 8kHz = 8000 samples per second so 8000 x 8-bit = 64000 bit per second = 64 Kilobit per second = 64 Kbps)

Link: http://encyclopedia2.thefreedictionary.com/Nyquist+theorem

Note:

Nyquist theory:

"When sampling a signal (e.g., converting from an analog signal to digital), the sampling frequency must be greater than twice the bandwidth of the input signal in order to be able to reconstruct the original perfectly from the sampled version."

QUESTION 22
Which one of these statements is an example of how trust and identity management solutions should be deployed in the enterprise campus network?

A. Authentication validation should be deployed as close to the data center as possible.

B. Use the principle of top-down privilege, which means that each subject should have the privileges that are necessary to perform their defined tasks, as well as all the tasks for those roles below them.
C. Mixed ACL rules, using combinations of specific sources and destinations, should be applied as close to the source as possible.
D. For ease of management, practice defense in isolation - security mechanisms should be in place one time, in one place.

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:
Explanation:

"Pass Any Exam. Any Time." - www.actualtests.com 27
Cisco 200-310 Exam
Validating user authentication should be implemented as close to the source as possible, with an emphasis on strong authentication for access from untrusted networks. Access rules should enforce policy deployed throughout the network with the following guidelines:

·Source-specific rules with any type destinations should be applied as close to the source as possible.

·Destination-specific rules with any type sources should be applied as close to the destination as possible.

·Mixed rules integrating both source and destination should be used as close to the source as possible.

An integral part of identity and access control deployments is to allow only the necessary access. Highly distributed rules allow for greater granularity and scalability but, unfortunately, increase the management complexity. On the other hand, centralized rule deployment eases management but lacks flexibility and scalability.

Practicing "defense in depth" by using security mechanisms that back each other up is an important concept to understand. For example, the perimeter Internet routers should use ACLs to filter packets in addition to the firewall inspecting packets at a deeper level.

Cisco Press CCDA 640-864 Official Certification Guide Fourth Edition, Chapter 13

QUESTION 23
With deterministic Wireless LAN Controller redundancy design, the different options available to the designer have their own strengths. Which one of these statements is an example of such a strength?

A. Dynamic load balancing, or salt-and-pepper access point design, avoids the potential impact of oversubscription on aggregate network performance.
B. N+N redundancy configuration allows logically grouping access points on controllers to minimize intercontroller roaming events.
C. N+N+1 redundancy configuration has the least impact to system management because all of the controllers are colocated in an NOC or data center.
D. N+1 redundancy configuration uses Layer 3 intercontroller roaming, maintaining traffic on the same subnet for more efficiency.

Correct Answer: B

Section: (none)
Explanation

Explanation/Reference:
Explanation:

With such an arrangement there is no complex mesh of access points & controllers.

Link: http://www.cisco.com/web/learning/le31/le46/cln/qlm/CCDA/design/understanding-wireless- network-controller-technology-3/player.html

N+N WLC Redundancy

With N+N redundancy, shown in Figure 5-14, an equal number of controllers hack up each other. For example, a pair of WLCs on one floor serves as a backup to a second pair on another floor. The top WLC is primary for API and AP2 and secondary for AP3 and AP4. The bottom WLC is primary for AP3 and AP4 and secondary for API and AP2. There should be enough capacity on each controller to manage a failover situation.

Figure 5-14 *N+N Controller Redundancy*

N+N+1 WLC Redundancy

With N+N+1 redundancy, shown in Figure 5-15, an equal number of controllers back up each other (as with N+N), plus a backup WLC is configured as the tertiary WLC for the APs. N+N+1 redundancy functions the same as N+N redundancy plus a tertiary controller that backs up the "Pass Any Exam. Any Time." - www.actualtests.com 29
Cisco 200-310 Exam
secondary controllers. The tertiary WLC is placed in the data center or network operations center
Figure 5-15 *N+N+1 Controller Redundancy*

Table 5-9 covers WLC redundancy.

Table 5-9 *WLC Redundancy*

WLC Redundancy	Description
N+1	A single WLC acts as the backup for multiple WLCs. The backup WLC is configured as the secondary on APs.
N+N	An equal number of controllers back up each other.
N+N+1	An equal number of controllers back up each other. The backup WLC is configured as the tertiary on APs.

QUESTION 24
When designing the threat detection and mitigation portion for the enterprise data center network, which of the following would be the most appropriate solution to consider?

A. 802.1X

B. ACLs in the core layer
C. Cisco Security MARS
D. Cisco Firewall Services Module

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 25
You have a campus network that consists of only Cisco devices. You have been tasked to discover the device platforms, the IOS versions, and an IP address of each device to map the network. Which proprietary protocol will assist you with this task?

A. SNMP
B. TCP
C. CDP
D. ICMP
E. LLDP

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 26
"Pass Any Exam. Any Time." - www.actualtests.com 31
Cisco 200-310 Exam
Which three technologies are recommended to be used for WAN connectivity in today's Enterprise Edge designs? (Choose three.)

A. DWDM
B. Metro Ethernet
C. Frame Relay
D. MPLS VPN
E. ISDN
F. DSL

G. Wireless

Correct Answer: ABD
Section: (none)
Explanation

Explanation/Reference:
Explanation:

There is some discussion about whether ISDN not DWDM should be the answer but it does say TODAYS network

QUESTION 27
WAN backup over the Internet is often used to provide primary connection redundancy. Which is the most important consideration when passing corporate traffic over the public Internet?

A. security
B. static versus dynamic routing
C. bandwidth
D. QoS
E. latency

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:

WAN Backup over the Internet

Another alternative for WAN backup is to use the Internet as the connectivity transport between sites. However, keep in mind that this type of connection does not support bandwidth guarantees. The enterprise also needs to work closely with the ISP to set up the tunnels and advertise the company's networks internally so that remote offices have reachable IP destinations.

Security is of great importance when you rely on the Internet for network connectivity, so a secure tunnel using IPsec needs to be deployed to protect the data during transport.

QUESTION 28
Which three are considered as technical constraints when identifying network requirements? (Choose three.)

A. support for legacy applications

B. bandwidth support for new applications
C. limited budget allocation
D. policy limitations
E. limited support staff to complete assessment
F. support for existing legacy equipment
G. limited timeframe to implement

Correct Answer: ABF
Section: (none)
Explanation

Explanation/Reference:
Explanation:

Network design might be constrained by parameters that limit the solution. Legacy applications might still exist that must be supported going forward, and these applications might require a legacy protocol that may limit a design. Technical constraints include the following:

·Existing wiring does not support new technology.

·Bandwidth might not support new applications.

·The network must support exiting legacy equipment.

·Legacy applications must be supported (application compatibility).

QUESTION 29
DRAG DROP

DRAG DROP

Drag the description or characteristic on the left to the appropriate technology or protocol on the right.

Drag the description or characteristic on the left to the appropriate technology or protocol on the right.

provides complete network visibility from the physical layer to the application layer	SNMP
processes larger ACLs efficiently for packet filtering and security services	RMON
defines how information is exchanged between network management applications and agents	CDP
runs over the data link layer using a multicast address	NetFlow

A.

B.

C.

D.

Correct Answer:
Section: (none)
Explanation

QUESTION 31
Characterizing an existing network requires gathering as much information about the network as possible. Which of these choices describes the preferred order for the information-gathering process?

A. site and network audits, traffic analysis, existing documentation and organizational input
B. existing documentation and organizational input, site and network audits, traffic analysis
C. traffic analysis, existing documentation and organizational input, site and network audits
D. site and network audits, existing documentation and organizational input, traffic analysis

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:
Explanation:

This section describes the steps necessary to characterize the existing network infrastructure and all sites. This process requires three steps:

Step 1. Gather existing documentation about the network, and query the organization to discover additional information. Organization input, a network audit, and traffic analysis provide the key information you need. (Note that existing documentation may be inaccurate.)

Step 2. Perform a network audit that adds detail to the description of the network. If possible, use traffic-analysis information to augment organizational input when you are describing the applications and protocols used in the network.

Step 3. Based on your network characterization, write a summary report that describes the health of the network. With this information, you can propose hardware and software upgrades to support the network requirements and the organizational requirements.

QUESTION 32
Which three terms describe the primary functions of the distribution layer of the campus network design hierarchy? (Choose three.)

Cisco 200-310 Exam

A. provides end-user connectivity
B. provides high speed transport
C. provides QoS services
D. enforces security policies
E. provides WAN connections
F. connects access devices to the core backbone

QUESTION 38
DRAG DROP

Drag the characteristics of the traditional campus network on the left to the most appropriate hierarchical network layer on the right.

High level of availability, scalability, and fast convergence	**Access**
Enforces Policy within the network	
Routing boundary (Dynamic, summarization, static)	**Distribution**
Provides security, QoS, and IP Multicast to the network	
Provides a limited set of services	**Core**
The most feature-rich part of the campus network	

A.

B.

C.

D.

Correct Answer:
Section: (none)
Explanation

Explanation/Reference:

High level of availability, scalability, and fast convergence	Access
Enforces Policy within the network	The most feature-rich part of the campus network
Routing boundary (Dynamic, summarization, static)	Provides security, QoS, and IP Multicast to the network
Provides security, QoS, and IP Multicast to the network	Distribution
Provides a limited set of services	Routing boundary (Dynamic, summarization, static)
The most feature-rich part of the campus network	Enforces Policy within the network
	Core
	High level of availability, scalability, and fast convergence
	Provides a limited set of services

Explanation:

Access

Distribution

Core

Large-Building LANs
"Pass Any Exam. Any Time." - www.actualtests.com 48
Cisco 200-310 Exam
Large-building LANs are segmented by floors or departments. The building-access component serves one or more departments or floors. The building-distribution component serves one or more building-access components. Campus and building backbone devices connect the data center, building-distribution components, and the enterprise edge-distribution component. The access layer typically uses Layer 2 switches to contain costs, with more expensive Layer 3 switches in the distribution layer to provide policy enforcement. Current best practice is to also deploy multilayer switches in the campus and building backbone.

QUESTION 46
Which layer of the OSI model does Cisco recommend to place the enterprise network core layer, when designing a network based on its switched hierarchical design?

A. Layer 1

B. Layer 2

C. Layer 3

D. Layer 4

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 47
OSPF will be used as the IGP within a campus network. Which two things should you consider before deployment? (Choose two.)

A. All areas need to connect back to area 0.

B. The OSPF process number on each router should match.

C. NSSA areas should be used when an area cannot connect directly to area 0.

D. Stub areas should be connected together using virtual links.

E. ECMP may cause undesired results depending on the environment.

Correct Answer: AE
Section: (none)
Explanation

Explanation/Reference:

Explanation:

QUESTION 48
Which Cisco technology using Nexus NX-OS infrastructure allows the network architect to create up to four separate control and data plane instances of the Nexus chassis?

A. virtual port-channel
B. virtual routing and forwarding
C. virtual switching system
D. virtual device context

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:
Explanation:

Virtualization

Virtual local-area network (VLAN), virtual storage-area network (VSAN), and virtual device contexts (VDC) help to segment the LAN, SAN, and network devices instances.

Cisco Nexus 1000V virtual switch for VMware ESX and ESXI help to deliver visibility and policy control for virtual machines (VM).

Flexible networking options with support for all server form factors and vendors, including support for blade servers from Cisco, Dell, IBM, and HP with integrated Ethernet and Fiber Channel switches.

QUESTION 49
Which three options are valid Cisco STP tools used to ensure best-practice access layer design for the enterprise campus? (Choose three.)

A. Port fast
B. UDLD
C. Root Guard
D. BPDU Guard
E. Flex Links
F. SPAN
G. Ether Channel

Correct Answer: ACD
Section: (none)

Explanation

Explanation/Reference:
Explanation:

Access layer Limit VLANs to a single closet when possible to provide the most deterministic and highly available topology.

Use RPVST+ if STP is required. It provides the best convergence.

Set trunks to ON and ON with no-negotiate

Manually prune unused VLANs to avoid broadcast propagation.

Use VTP Transparent mode, because there is little need for a common VLAN database in hierarchical networks.

Disable trunking on host ports, because it is not necessary. Doing so provides more security and speeds up Port Fast.

Consider implementing routing in the access layer to provide fast convergence and Layer 3 load balancing.

Use Cisco STP Toolkit, which provides Port Fast, Loop Guard, Root Guard, and BPDU Guard.

QUESTION 50
Spanning Layer 2 across geographically separate data centers is a key consideration for current data center designs. Which is the name of the NX-OS technology that facilitates MAC in IP transport for Layer 2 VLANs across any IP network?

A. Overlay Transport Virtualization
B. Virtual Private LAN Services
C. Generic Routing Encapsulation
D. QinQ tunneling

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 51
Which two statements about designing the Data Center Access layer are correct? (Choose two.)

A. Multiport NIC servers should each have their own IP address.
B. Layer 3 connectivity should never be used in the access layer.

C. Layer 2 connectivity is primarily implemented in the access layer.

D. Multiport NIC servers should never be used in the access layer.

E. Layer 2 clustering implementation requires servers to be Layer 2 adjacent.

Correct Answer: CE
Section: (none)
Explanation
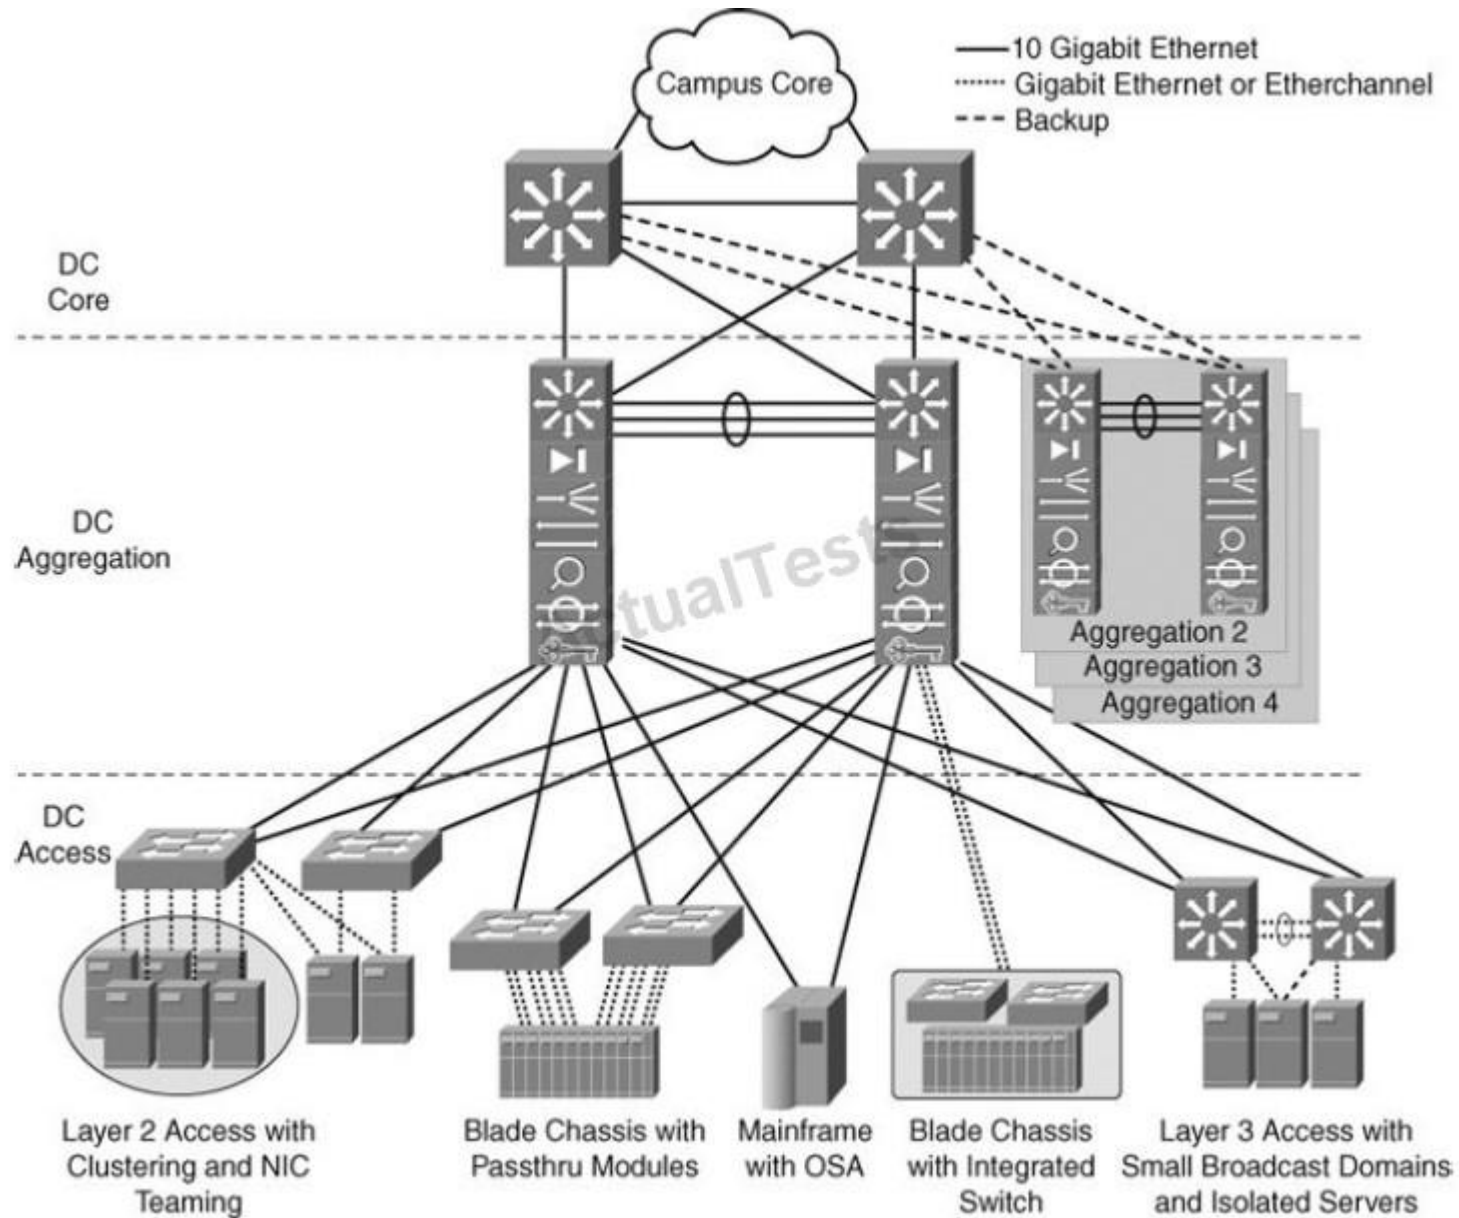

Explanation/Reference:
Explanation:

User access is primarily layer 2 in nature, layer 2 clustering is possible only in layer 2

Here is the Explanation: from the Cisco press CCDA certification guide

Figure 4-8. Enterprise Data Center Infrastructure Overview

"Pass Any Exam. Any Time." - www.actualtests.com 62
Cisco 200-310 Exam

Defining the DC Access Layer

The data center access layer's main purpose is to provide Layer 2 and Layer 3 physical port density for various servers in the data center. In addition, data center access layer switches provide high-performance, low-latency switching and can support a mix of oversubscription requirements. Both Layer 2 and Layer 3 access (also called routed access) designs are available, but most data center access layers are built using Layer 2 connectivity. The Layer 2 access design uses VLAN trunks upstream, which allows data center aggregation services to be shared across the same VLAN and across multiple switches. Other advantages of Layer 2 access are support for NIC teaming and server clustering that requires network connections to be Layer 2 adjacent or on the same VLAN with one another.

CCDA 640-864 Official Certification Guide Fourth Edition, Chapter 4

QUESTION 52
What is the primary consideration when choosing a routed network design over a traditional campus network design?
"Pass Any Exam. Any Time." - www.actualtests.com 63
Cisco 200-310 Exam

A. Layer 3 service support at the network edge

B. the routing protocol choice: open (OSPF) or proprietary (EIGRP)

C. the routing abilities of the host devices

D. the need to control the broadcast domains within the campus core

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:

Layer 3 ability at network edge should be available to leverage the benefits of routed network design.

Link: http://www.cisco.com/en/US/docs/solutions/Enterprise/Campus/campover.html

QUESTION 53
When selecting which hardware switches to use throughout an enterprise campus switched network, which consideration is not relevant?

A. whether data link layer switching based upon the MAC address is required

B. the number of shared media segments

C. which infrastructure service capabilities are required

D. whether to support Layer 3 services at the network edge

Correct Answer: B
Section: (none)

Explanation

Explanation/Reference:
Explanation:

Shared media are not used in modern networks; all links are operating full-duplex "Pass Any Exam. Any Time." - www.actualtests.com 64
Cisco 200-310 Exam
Link: http://www.cisco.com/en/US/docs/solutions/Enterprise/Campus/campover.html

QUESTION 54
Which two of these practices are considered to be best practices when designing the access layer for the enterprise campus? (Choose two.)

A. Implement all of the services (QoS, security, STP, and so on) in the access layer, offloading the work from the distribution and core layers.
B. Always use a Spanning Tree Protocol; preferred is Rapid PVST+.
C. Use automatic VLAN pruning to prune unused VLANs from trunked interfaces to avoid broadcast propagation.
D. Avoid wasted processing by disabling STP where loops are not possible.
E. Use VTP transparent mode to decrease the potential for operational error.

Correct Answer: BE
Section: (none)
Explanation

Explanation/Reference:
Explanation:

When designing the building access layer, you must consider the number of users or ports required to size up the LAN switch. Connectivity speed for each host should also be considered. Hosts might be connected using various technologies such as Fast Ethernet, Gigabit Ethernet, or port channels. The planned VLANs enter into the design.

Performance in the access layer is also important. Redundancy and QoS features should be considered.

The following are recommended best practices for the building access layer:

· Limit VLANs to a single closet when possible to provide the most deterministic and highly available topology.

· Use Rapid Per-VLAN Spanning Tree Plus (RPVST+) if STP is required. It provides the faster "Pass Any Exam. Any Time." - www.actualtests.com 65
Cisco 200-310 Exam
convergence than traditional 802.1d default timers.

· Set trunks to ON and ON with no-negotiate.

· Manually prune unused VLANs to avoid broadcast propagation (commonly done on the distribution switch).

· Use VLAN Trunking Protocol (VTP) Transparent mode, because there is little need for a common VLAN database in hierarchical networks.

· Disable trunking on host ports, because it is not necessary. Doing so provides more security and speeds up PortFast.

· Consider implementing routing in the access layer to provide fast convergence and Layer 3 load balancing.

· Use the switchport host commands on server and end-user ports to enable PortFast and disable channeling on these ports.

· Use Cisco STP Toolkit, which provides

· PortFast: Bypass listening-learning phase for access ports

· Loop GuarD. Prevents alternate or root port from becoming designated in absence of bridge protocol data units (BPDU)

· Root GuarD. Prevents external switches from becoming root

· BPDU GuarD. Disables PortFast-enabled port if a BPDU is received

Cisco Press CCDA 640-864 Official Certification Guide Fourth Edition, Chapter 3, Page 85

QUESTION 55
The enterprise campus core layer has requirements that are unique from the distribution and access layers. Which of the following is true about the core layer?

A. The core layer provides convergence using Layer 2 and Layer 3 services and features.
B. The core layer provides high availability to support the distribution layer connections to the enterprise edge.
C. The campus core layer is optional.
D. The core layer requires high performance to manage the traffic policing across the backbone.

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 56
Which of these statements is true concerning the data center access layer design?

A. The access layer in the data center is typically built at Layer 3, which allows for better sharing of services across multiple servers.
B. With Layer 2 access, the default gateway for the servers can be configured at the access or aggregation layer.

C. A dual-homing NIC requires a VLAN or trunk between the two access switches to support the dual IP addresses on the two server links to two separate switches.

D. The access layer is normally not required, as dual homing is standard from the servers to the aggregation layer.

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 57
Which one of these statements is true concerning the data center distribution (aggregation) layer design?

A. With Layer 3 at the aggregation layer, the physical loops in the topology must still be managed by STP.

B. The boundary between Layer 2 and Layer 3 must reside in the multilayer switches, independent of any other devices such as firewalls or content switching devices.

C. A mix of both Layer 2 and Layer 3 access is sometimes the most optimal.

D. In a small data center, the aggregation layer can connect directly to the campus core, exchanging IP routes and MAC address tables.

Correct Answer: C

Here is the correct answer

Network Virtualization

* VPC

* VLAN

* VRF

Device Virtualization

*ASA firewall context

*IPS

*VDC

Network virtualization encompasses logical isolated network segments that share the same physical infrastructure. Each segment operates independently and is logically separate from the other segments. Each network segment appears with its own privacy, security, independent set of policies, QoS levels, and independent routing paths.

Here are some examples of network virtualization technologies:

Device virtualization allows for a single physical device to act like multiple copies of itself. Device virtualization enables many logical devices to run independently of each other on the same physical piece of hardware. The software creates virtual hardware that can function just like the physical network device. Another form of device virtualization entails using multiple physical

Which three describe challenges that are faced when deploying an environment for teleworkers? (Choose three.)

A. supporting a mix of technically knowledgeable and nontechnical users
B. simplifying router installation and configuration
C. verifying available power at employee's house for necessary equipment
D. avoiding situations where employees might use nonstandard hardware or configurations
E. reducing daily commuting time to main office location
F. providing access to FTP servers located in main office location
G. implementing leased line connectivity between main office and employee's home location

Correct Answer: ABD

QUESTION 79
You need to connect to a remote branch office via an Internet connection. The remote office does not use Cisco equipment. This connection must be secure and must support OSPF. Which of the following can be used to transport data to the branch office?

A. GRE over IPsec
B. IPsec
C. GRE
D. IPsec VTI

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 80
Which two are characteristics of a Lightweight Access Point? (Choose two.)

A. managed via a central wireless LAN controller
B. code upgrade performed via a TFTP server
C. CAPWAP tunnels
D. managed directly via CLI or web interface
E. facilitates the creation of its own WLANs and port mappings

Correct Answer: AC
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 81
Which one of these statements describes why, from a design perspective, a managed VPN approach for enterprise teleworkers is most effective?

A. A managed VPN solution uses a cost-effective, on-demand VPN tunnel back to the enterprise.
B. This solution supports all teleworkers who do not require voice or video.

C. This architecture provides centralized management where the enterprise can apply security policies and push configurations.
D. It provides complete flexibility for remote access through a wireless hotspot or a guest network at a hotel, in addition to a home office.

Correct Answer: C
Section: (none)
Explanation

QUESTION 82
"Pass Any Exam. Any Time." - www.actualtests.com 86
Cisco 200-310 Exam
What are three key areas that need to be considered when designing a remote data center? (Choose three.)

A. power diversity
B. active directory services
C. Cisco IOS versions
D. data storage
E. applications
F. user access
G. packet routing

Correct Answer: ADE
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 83
If a teleworker is required to access the branch office via a secure IPSEC VPN connection, which technology is recommended to provide the underlying transport?

A. ISDN
B. Metro Ethernet
C. Frame Relay
D. ADSL
E. ATM

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 84
Which model of ISR is utilized for the teleworker design profile?

A. Cisco 1900 Series
B. Cisco 1800 Series
C. Cisco 800 Series
D. Cisco 500 Series

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 85
When designing a WAN backup for voice and video applications, what three types of connections should be used? (Choose three.)

A. Private WAN
B. internet
C. ISDN
D. MPLS
E. dial-up
F. ATM
G. DSL

Correct Answer: ACD
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 86
Which three options represents the components of the Teleworker Solution? (Choose three.)

A. Cisco Unified IP Phone
B. Cisco 880 Series Router
C. Aironet Office Extend Access Point
D. Catalyst 3560 Series Switch
E. Cisco 2900 Series Router
F. MPLS Layer 3 VPN
G. Leased lines

Correct Answer: ABE
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 87
Which three service categories are supported by an ISR? (Choose three.)

A. voice
B. security
C. data
D. Internet
E. storage
F. satellite

Correct Answer: ABC
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 88
When designing for a remote worker, which two are typical requirements? (Choose two.)

"Pass Any Exam. Any Time." - www.actualtests.com 90
Cisco 200-310 Exam

A. best-effort interactive and low-volume traffic patterns
B. connections to the enterprise edge using Layer 2 WAN technologies
C. always-on connection with SLA from ISP
D. voice and IPsec VPN support
E. high-end security devices with stateful firewall filtering
F. dual or multihoming to ISPs

Correct Answer: CD
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 89
What is the maximum number of groups that is supported by GLBP?

A. 64
B. 256
C. 512
D. 1024

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 90
DRAG DROP

DRAG DROP

Match the bandwidth usage optimization technique on the left with its definition on the right.

Match the bandwidth usage optimization technique on the left with its definition on the right.

| queuing |
| window size |
| traffic policing |
| data compression |

| limits the number of frames transmitted before an acknowledgement is received |
| reduces data size to save transmission time, optimizing the use of WAN bandwidth |
| allows network administrators to manage the varying demands generated by applications |
| discards packets or modifies some aspect of them (such as IP precedence) |

A.
B.
C.
D.

Correct Answer:
Section: (none)
Explanation

Explanation/Reference:

Match the bandwidth usage optimization technique on the left with its definition on the right.

queuing	window size
window size	data compression
traffic policing	queuing
data compression	traffic policing

Explanation:

+ limits the number of frames transmitted before an acknowledgement is received: window size+ reduces data size to save transmission time, optimizing the use of WAN bandwidth: data compression+ allows network administrators to manage the varying demands generated by applications: queuing+ discards packets or modifies some aspect of them (such as IP precedence): traffic policing

QUESTION 107
Which three items pertain to EIGRP? (Choose three.)

A. Can use multiple unequal paths.
B. Routes are redistributed as type 2 by default.
C. ASN and K values must match to form neighbors.
D. Uses multicast address 224.0.0.9 for updates.
E. Exchanges full routing table every 30 seconds.
F. Summary routes have AD of 90.
G. External routes have AD of 170.

Correct Answer: ACG
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 108
A hierarchical design of the EIGRP domain facilitates which two of the following? (Choose two.)

A. route summarization
B. faster convergence
C. unequal cost load balancing
D. redistribution
E. virtual links

Correct Answer: AB
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 109
Which three protocols support VLSM? (Choose three.)

A. RIPv2
B. RIPv1
C. EIGRP
D. OSPF
E. IGRP

Correct Answer: ACD
Section: (none)
Explanation

QUESTION 110
Which statement should the designer keep in mind when considering the advanced routing features?

A. One-way route redistribution avoids the requirement for static or default routes.
B. Redistribution, summarization, and filtering are most often applied between the campus core and enterprise edge.
C. Filtering only occurs on the routing domain boundary using redistribution.
D. Summarize routes at the core toward the distribution layer.
E. The hierarchical flexibility of IPv6 addressing avoids the requirement for routing traffic reduction using aggregation.

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 111
When designing an EIGRP network, which two things should you take into consideration? (Choose two.)

A. ASN and K values must match.
B. The neighbor command can be used to enable unicast communication.
C. The neighbor diameter cannot exceed a 15-hops limit.
D. NSSA areas can be used to redistribute external routes.
E. Neighbor relationship can be established with non-Cisco routers.

Correct Answer: AB

Explanation:

QUESTION 153
During the design of a new campus network, the customer requests the ability to route overlapping IP addresses. What technology can be leveraged to meet this request?

A. VRF
B. VLANs
C. VSS
D. VPC

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 154
A network engineer is attempting to separate routing domains using a virtualization technology. What protocol can be configured to perform this task?

A. VLAN
B. VSAN
C. VRF
D. VPC

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:

Explanation:

QUESTION 155
What device virtualization technology allows for a single point of management and a centralized routing instance?

A. ACE
B. VSS
C. VDC
D. VM

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 156
What two performance considerations must be taken into account when designing a remote worker access solution? (Choose two.)

A. simultaneous VPN connections
B. port density
C. throughput capacity
D. packet size
E. latency

Correct Answer: AC
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 157
In which network location should an external DNS server be placed?

A. campus data center
B. enterprise branch
C. internet
D. remote access

Correct Answer: C
Section: (none)
Explanation

QUESTION 158
What submodule is found within the Enterprise Edge module?

A. enterprise WAN

B. remote branch

C. campus IPS

D. building distribution

Correct Answer: A
Section: (none)
Explanation

QUESTION 159
A company requires a managed WAN solution that supports Layer 2 adjacency across remote offices for applications and services. What solution should be selected?

A. DMVPN

B. MPLS

C. VPLS

D. FR

Correct Answer: C
Section: (none)
Explanation

QUESTION 160
A circuit order has been placed for Gigabit Ethernet and is 80KM from the carrier equipment. What

"Pass Any Exam. Any Time." - www.actualtests.com 133 Cisco 200-310 Exam
type of SFP will be required?

A. TX

B. SX
C. ZX
D. LX

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 161
A company has dark fiber between headquarters and its data center. It is presently configured as a 10GbE connection. Network utilization shows high utilization on the connection. What technology can be implemented to increase capacity without acquiring another circuit?

A. MPLS
B. DWDM
C. VPLS
D. DMVPN

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:
Explanation:

"Pass Any Exam. Any Time." - www.actualtests.com 134 Cisco 200-310 Exam

QUESTION 162
A secure WAN design requires dynamic routing and IP multicast. What two VPN protocols meet these requirements? (Choose two.)

A. Standard IPsec
B. P2P GRE over IPsec
C. DMVPN
D. AnyConnect
E. PPTP
F. Easy VPN
G. SSL/TLS

Correct Answer: BC
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 163
What branch design supports 100 to 1000 users and integrates ASA firewalls?

A. small
B. medium
C. large
D. extra large

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 164
A network engineer is designing an enterprise managed VPN solution for a large number of remote offices that do not have on-site IT support and communicate only with the home office.
What type of VPN solution should be implemented?

A. VPLS
B. GRE
C. IPsec
D. EVPN
E. DMVPN
F. SSL client

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 165
A remote office has a T1 WAN link to headquarters and a T1 Internet connection. The client requests WAN redundancy to headquarters with similar bandwidth. What two connection types satisfy this requirement? (Choose two.)

A. Secondary T1 WAN circuit
B. ISDN BRI
C. IPSec Tunnel over the Internet
D. DWDM I
E. POTS Line T1 WAN

Correct Answer: AC
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 166
What two features are advantages of adding a secondary WAN link at the enterprise edge? (Choose two.)

A. provides additional bandwidth and load balancing capabilities
B. acts as a backup link in event the primary link fails
C. reduces capital and operational costs
D. improves security and prevents against denial of service attacks
E. distributes traffic proactively based on link utilization

Correct Answer: AB
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 167
What technology can secure data over an insecure medium and provide WAN redundancy in the event of a primary connection failure?

A. virtual private network

B. shadow PVC

C. dial-up ISDN

D. GRE Tunnel

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 168
A client wants to consolidate applications that are currently housed at multiple sites to a remote data center. What two design requirements are unique to this scenario? (Choose two.)

A. bandwidth

B. security

C. latency

D. storage

E. availability

Correct Answer: AC
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 169
What IPv4 addressing technique allows for the division of addresses into subnets of different sizes?

A. VLSM

B. RIR

C. CIDR

D. NAT

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 170
An organization is conducting an evaluation on the migration to IPv6 within the enterprise network

"Pass Any Exam. Any Time." - www.actualtests.com 139 Cisco 200-310 Exam
and has requested clarification on recommended migration strategies. What three migration models would accomplish the organization's goal? (Choose three.)

A. Dual Stack
B. Service Block
C. Top-Down
D. Hybrid
E. Tunneled
F. Fork-Lift

Correct Answer: ABD
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 171
An application uses broadcast traffic to send data to IPv4 hosts. How can the application communicate using IPv6?

A. Anycast
B. Unicast
C. Broadcast
D. Multicast

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
"Pass Any Exam. Any Time." - www.actualtests.com 140 Cisco 200-310 Exam

Explanation:

QUESTION 172
What significant advantage does EIGRP have over OSPF?

A. easy summarization
B. shorter convergence times
C. single area operation
D. low processor utilization

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 173
What routing protocol requires full mesh between internal peers in an enterprise network?

A. OSPF
B. EIGRP
C. BGP
D. ISIS
E. RIP

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 174
What three considerations should be taken into account when selecting a routing protocol? (Choose three.)

A. classful routing
B. scalability
C. default route origination
D. multi vendor support
E. link load balancing

F. hop count

Correct Answer: BDE
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 175
By default, how does EIGRP's metric differ from OSPF?

"Pass Any Exam. Any Time." - www.actualtests.com 142 Cisco 200-310 Exam

A. hops
B. cost
C. bandwidth
D. delay

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 176
What characteristic separates link state routing protocols from a distance vector?

A. creates a topological view of the entire network
B. path calculation utilizes a more granular metric
C. does not scale well for large networks
D. constantly shares link state updates throughout the topology

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 177
A company must deploy an IGP routing protocol on an Enterprise Network. Where should route summarization be implemented?

A. distribution

B. core

C. access

D. backbone

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 178
What routing configuration can prevent routing loops between IGPs?

A. route filters

B. route reflectors

C. auto summarization

D. virtual links

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 179
What is the first step when creating a network security policy?

A. define what should be protected

B. investigate how likely an attack is to occur

C. implement measures to protect assets

D. hire a security firm to perform penetration tests

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 180
A customer requests a filtering design based on the need to scan all internet traffic, including remote workers. What solution meets these requirements?

A. Cisco Cloud Web Security
B. Cisco Network Admission Control
C. Cisco Identity Services Engine
D. Cisco Adaptive Security Appliance

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:

"Pass Any Exam. Any Time." - www.actualtests.com 145 Cisco 200-310 Exam

QUESTION 181
A customer wants to support a BYOD environment. What two products allow for posture assessment? (Choose two.)

A. ACS
B. NAC
C. ASA
D. ISE
E. WAAS
F. IDS

Correct Answer: BD
Section: (none)
Explanation

Explanation/Reference:

Explanation:

QUESTION 182
What two CoS values are used by voice traffic? (Choose two.)

A. COS1
B. COS2
C. COS3
D. COS4
E. COS5

Correct Answer: CE
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 183
A client wants to deploy a video conferencing platform in a multisite WAN environment. What two design considerations need to be evaluated? (Choose two.)

A. CODECs supported by the video units
B. buffer sizes on the routers
C. POE capabilities of the switches
D. number of current calls
E. number of hops between sites

Correct Answer: AD
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 184
What wireless authentication option requires a Public Key Infrastructure?

"Pass Any Exam. Any Time." - www.actualtests.com 147 Cisco 200-310 Exam

A. EAP-TLS

B. PEAP

C. LEAP

D. EAP-FAST

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 185
What two access point modes support the transmission of user traffic over a LWAPP/CAPWAP tunnel? (Choose two.)

A. local

B. H-REAP

C. rogue detector

D. monitor

E. sniffer

F. standalone

Correct Answer: AB
Section: (none)
Explanation

Explanation/Reference:
Explanation:

"Pass Any Exam. Any Time." - www.actualtests.com 148 Cisco 200-310 Exam

QUESTION 186
What is the primary advantage of implementing a wireless LAN controller in a wireless LAN design?

A. roaming between APs

B. RADIUS user authentication

C. radio resource management

D. accelerated data transfer

Correct Answer: C

Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 187
A wireless LAN client is sending traffic to the wired LAN client. What path will the packet take to reach the destination endpoint in a lightweight wireless deployment?

A. switch > controller > ap > client
B. controller > ap > switch > client
C. ap > controller > switch > client
D. switch > ap > controller > client

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:
"Pass Any Exam. Any Time." - www.actualtests.com 149 Cisco 200-310 Exam

Explanation:

QUESTION 188
What Cisco product is designed to improve the performance of Windows file and exchange services in remote data centers?

A. Application Control Engine
B. Wide Area Application Services
C. Cisco Application Policy Infrastructure Controller
D. Cisco Prime Network Services Controller

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 189
An organization needs a WAN Transport technology that meets these criteria:

· has a low initial cost

· provides low-to-medium BW

· has medium-to-high latency and jitter

Which technology should the organization use?

A. DSL
B. x.25
C. ISDN
D. wireless
E. analog modem

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 190
Which two of these are scalability benefits of designing a network that utilizes VPNs? (Choose two.)

A. extends the network to remote users
B. allows networks to be set up and restructured quickly
C. reduces dial infrastructure expenditures
D. reduces the number of physical connections
E. simplifies the underlying structure of a customer WAN
Correct Answer: DE
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 191

Refer to the exhibit.

A standard Layer 2 campus network design is pictured. Which numbered box represents the core layer?

A. #1
B. #2
C. #3
D. #4
E. #5

Correct Answer: C
Section: (none)

Explanation

Explanation/Reference:
"Pass Any Exam. Any Time." - www.actualtests.com 152 Cisco 200-310 Exam

Explanation:

QUESTION 192
Which two design criteria require VLANs in a proposed solution? (Choose two.)

A. video streaming on the LAN
B. security between departments
C. the segmenting of collision domains
D. the segmenting of broadcast domains
E. the use of multivendor equipment
F. a limited corporate budget

Correct Answer: BD
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 193
Which three sources does a network designer use to collect information for characterizing an existing network? (Choose three.)

A. staff input
B. visual inventory
C. network audit
D. traffic analysis
E. server statistics

Correct Answer: ACD
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 194
Which Cisco security mechanism has the attributes listed below?

· It is a sensor appliance

· It searches for potential attacks by capturing and analyzing traffic

· It is a "purpose-built device"

· It is installed passively

· It introduces no delay or overhead

A. IKE
B. PIX
C. HIPS
D. NIDS
E. HMAC

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 195
Which three pieces of information should be documented for each step in a design implementation plan? (Choose three.)

A. step description
B. design document references
C. easy guidelines in case of failure
D. estimated implementation time
E. simple implementation guidelines
F. estimated rollback time in case of failure

Correct Answer: ABD
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 196
Which Cisco device management feature is most suited to metering network traffic and providing data for billing network usage?

A. BGP
B. Cisco Discovery Protocol
C. QoS
D. RMON
E. NetFlow

Correct Answer: E
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 197
What are three valid methods of gathering information about an existing data network? (Choose three.)

A. Use organizational input.
B. Perform a traffic analysis.
C. Analyze the user-mapping of a running application.
D. Perform a packet-level audit to verify carrier service guarantees.
E. Perform a network audit to gather more detail about the network.
F. Use reports that analyze the metrics of the customer's existing network.

Correct Answer: ABE

"Pass Any Exam. Any Time." - www.actualtests.com 156 Cisco 200-310 Exam

Explanation:

QUESTION 198
What is the benefit of VLSM?

A. reduces configuration complexity by using the same subnet mask length
B. reduces the routing table size by using automatic route summarization
C. reduces the routing table size by using manual route summarization
D. allows the subnet mask and classful routing updates to be advertised
E. secures the hosts on a subnet by using RFC 1918 addresses

**Correct Answer:** C
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 199
Refer to the exhibit. On which router should you configure redistribution?

Router 5

Router 3

OSPF Area 1

EIGRP AS 100

OSPF Area 0

Router 1

Router 2

Router 6

Router 4

A. Router 1
B. Router 2
C. Router 3
D. Router 4
E. Router 5

Correct Answer: B
Section: (none)

Explanation

QUESTION 206
Which HSRP parameters must match, to ensure proper functionality?

A. group parameters
B. priority parameters
C. preempt parameters
D. tracking parameters

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 207
What three primary sources of information are needed to perform a network audit? (Choose three.)

A. existing documentation
B. new documentation

C. existing network management software
D. new network management tools
E. management personnel
F. technical personnel

Correct Answer: ACD
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 208
Which three layers comprise the traditional hierarchical model? (Choose three.)

A. core layer
B. distribution layer
C. access layer
D. aggregation layer
E. network layer
F. Internet layer

Correct Answer: ABC
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 209
Which first-hop redundancy protocol dynamically distributes client traffic between multiple routers?

A. HSRP
B. VRRP
C. GLBP
D. IGRP

Correct Answer: C
Section: (none)

Explanation

Explanation/Reference:
Explanation:

QUESTION 210
Which three options are characteristics of data center evolution? (Choose three.)

A. consolidation
B. virtualization
C. automation
D. standardization
E. optimization
F. modulation

Correct Answer: ABC
Section: (none)
Explanation

QUESTION 215
Router A has three feasible successors to the 192.168.1.0/24 network, which are listed here:

Option 1 has a metric of 8123228.

Option 2 has a metric of 2195467.

Option 3 has a metric of 8803823.

The variance 4 command was issued on Router A. How many active entries does Router A have in its routing table for the 192.168.1.0/24 network?

A. 0
B. 1
C. 2
D. 3

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 216
Which two mechanisms are used by distance vector protocols to prevent routing loops? (Choose two.)

A. split horizon
B. route summarization
C. route poisoning
D. tuned timers

Correct Answer: AC
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 217
Which interior routing protocol has the most preferable administrative distance by default?

A. RIP
B. OSPF
C. EIGRP
D. BGP
E. IS-IS

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 218
What two SAN protocols will allow a customer to utilize 10GbE for SAN access? (Choose two.)

A. ISCSI
B. FCoE
C. SATA
D. Fiber Channel
E. AoE

Correct Answer: AB
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 219
Application servers require load balancing and security services. Where in the data center network should these services be provisioned?

A. core

B. aggregation
C. Layer 3 access
D. distribution

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 220
A data center is reaching its power and cooling capacity. What two virtualization technologies can address the problem by directly reducing the number of physical devices? (Choose two.)

A. virtual switching systems
B. virtual device contexts
C. virtual servers
D. virtual routing and forwarding
E. virtual port channels
F. virtual LANs

Correct Answer: BC
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 221
A dynamically routed private line and a statically routed IPsec tunnel connect two offices. What routing configuration prefers the IPsec tunnel only in the event of a private line failure?

A. floating static entry
B. EIGRP variance
C. bandwidth metric
D. OSPF maximum paths

Correct Answer: A
Section: (none)

Explanation

Explanation/Reference:
Explanation:

QUESTION 222
When designing a new enterprise campus network, what topology should be used for maximum scalability?

A. flat
B. three-layer
C. star
D. partial mesh
E. full mesh

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 223
A spanning tree topology can be simplified by deploying what Cisco IOS technology in the distribution block?

A. VDC
B. vPC
C. Rapid PVST+
D. VSS
E. Flex Links

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 224
An organization is deciding what routing protocol to use throughout their network. What must be considered if routing is to be performed at the access

layer?

A. reduced scalability of the network when introducing a large number of switch blocks into the routing table
B. centralized management of access control lists at the distribution layer
C. reliability when implementing routing over spanning-tree at the access layer
D. performance differences between core, distribution and access layer equipment

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 225
A routing protocol neighbor relationship has been established between two routers across the public Internet using GRE. What technology can be used to encrypt this communication channel?

A. access lists
B. IP security
C. context based access
D. intrusion prevention system

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 226
Your company uses OSPF for internal routing. The company will be connected to VendorA via a single dedicated link and to VendorB via redundant dedicated links. Both vendors also use OSPF for internal routing.

Which of the following deployments describes the best intra-domain routing practice in this situation?

A. Connect your company to both VendorA and VendorB using existing OSPF.
B. Redistribute the routes on each link between your company and the vendors to a shared EIGRP routing protocol.
C. Use IBGP to reach VendorA and EBGP to reach VendorB.
D. Use static routes to reach VendorA and EBGP to reach VendorB.

E. Use static routes to reach both VendorA and VendorB.

Correct Answer: D
Section: (none)

QUESTION 227
You design a network with the following network addresses:

192.168.168.0

192.168.169.0

192.168.170.0

192.168.171.0

192.168.172.0

192.168.173.0

192.168.174.0

192.168.175.0

Which route address is the best summary of these network addresses?

A. 192.168.0.0/24
B. 192.168.171.128/3
C. 192.168.168.0/21
D. 192.168.175.0/3
E. 192.168.0.0/16

QUESTION 230
A large company requests a hierarchical design model. What tier should be free of physically connected hosts?

A. core
B. access
C. aggregation
D. distribution

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 231
Which two options are benefits of using a modular network architecture? (Choose two.)

A. facilitates troubleshooting
B. accurate monitoring
C. consistent documentation
D. increased flexibility
E. reduced cabling requirements

Correct Answer: AD
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 232
An organization is redesigning a 3-tier hierarchical network into a collapsed core. What design issue is a primary concern per Cisco best practices?

A. services delineation
B. port density
C. feature availability
D. resource utilization

Correct Answer: D
Section: (none)
Explanation

QUESTION 233
A network engineer is using the traditional switched hierarchical design. The client has asked to increase uplink utilization from the access layer to the distribution. How can the engineer attain this new requirement without adding new physical connections?

A. enable spanning-tree portfast

B. enable VSS at the distribution layer

C. increase the MTU size on the uplink interfaces

D. ensure the root bridge priority is equal on both distribution switches

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 234
What three design best practices are key functions of the distribution layer? (Choose three.)

A. fault domain isolation

B. admission control

C. access switch aggregation

D. QoS tagging

E. address summarization

F. end user and application isolation

Correct Answer: ACE
Section: (none)
Explanation

QUESTION 235
What design requirement is necessary for campus network access layer switching?

A. high cost per port
B. high availability
C. high scalability
D. high performance

Correct Answer: C
Section: (none)
Explanation

Explanation:

QUESTION 236
A network engineer requires that an OSPF ASBR must only flood external LSAs only within its own area. What OSPF area type should be configured?

A. Backbone Area
B. Totally Stub Area
C. Not So Stubby Area
D. Stub Area

Correct Answer: C
Section: (none)
Explanation

QUESTION 237
A network engineer is tasked to upgrade and expand a large existing production network. From the IOS CLI, what two protocols can be used to build a topology map of the existing network? (Choose two.)

A. SNMP
B. IP SLA
C. ICMP Echo
D. LLDP
E. Traceroute

Correct Answer: DE

Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 238
A network engineer has finished designing and implementing a new network. What two protocols would they use to gain insight into the network and determine the components that require optimization? (Choose two.)

A. CDP
B. NetFlow
C. ICMP Echo
D. NMAP
E. SNMP

Correct Answer: BE
Section: (none)
Explanation

Explanation:

QUESTION 240
In which two places is redundancy recommended in an enterprise campus network design? (Choose two.)

A. building distribution
B. campus core
C. building access
D. e-commerce
E. Internet connectivity

Correct Answer: AB
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 241
What are two purposes of route redundancy? (Choose two.)

A. minimize the effect of link failures
B. minimize the effect of internetworking device failures
C. minimize the convergence time of STP
D. reduce router CPU utilization
E. save network costs

Correct Answer: AB
**Section: (none)**
Explanation

The red lines refer to STP blocked ports. What happens if the HSRP active moves to the right distribution, and the STP root remains on the left distribution?

A. The STP root becomes the gateway.
B. The interdistribution link is used for transit.
C. The HSRP standby becomes the gateway.
D. The interaccess link is used for transit.
E. Host traffic is unable to reach the HSRP active.

Correct Answer: B

QUESTION 244
What is the optimal device and location to fulfill these requirements?

A. IPS inline outside of the firewall

B. IPS inline inside the firewall

C. Cisco IOS IPS on the border router

D. passive IPS connected to a SPAN port outside of the firewall

E. passive IPS connected to a SPAN port inside the firewall

Correct Answer: A
**Section: (none)**
Explanation

QUESTION 247
If two routing protocols have the same route and prefix, which effect do they have on the routing table?

"Pass Any Exam. Any Time." - www.actualtests.com 205 Cisco 200-310 Exam

A. Only the route with the lowest administrative distance is added.
B. Only the route with the highest administrative distance is added.
C. Both routes are added.
D. Neither route is added, and a loop is formed.

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 248
Which benefit is an advantage of route summarization?

A. It reduces the size of the routing table.
B. It causes routes to be updated more frequently.
C. It lowers the cost metric.
D. It enables neighbor discovery.

Correct Answer: A
