HP HP0-Y49

HP ATP FlexNetwork Solutions

This dumps is enough to pass the exam and I have to do.

Many mixed questions there is in this dump, many points of hot spot and others.

A "brain dump," as it relates to the certification exams, is a source of success.

The information provided in braindumps is only the information that could be remembered

Brain dumps is not hinder your ability to learn the material

Exam A

QUESTION 1

The HP Virtual Connect (VC) product is found within which HP FlexNetwork Architecture component?

- A. FlexBranch
- B. FlexFabric
- C. FlexManagement
- D. FlexCampus

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Reference: <http://h20195.www2.hp.com/V2/GetPDF.aspx%2F4AA4-8174ENW.pdf>

QUESTION 2

A network administrator has a network of HP ProVision switches with operator and manager passwords configured. The network administrator uses the copy config startup-config tftp <IP_address> <filename> pc command on each switch to save all the switch configuration to a TFTP server. The network administrator copies the configuration from one HP ProVision 3800 switch to an identical HP ProVision 3800 switch. The new switch no longer prompts for an operator or manager passwords.

What is the cause of this problem?

- A. The passwords must be saved by using a separate TFTP transfer with the copy passwords tftp <IP_address> <filename> pc command.
- B. The passwords cannot be restored they contain special characters misunderstood by the TFTP server.
- C. The passwords cannot be restored by default, to the startup-config file on the switch when executing the write memory command.

A network administrator is upgrading the operating system on an HP Comware switch. When copying the new image from a TFTP server to flash of the switch, the process fails because there is not enough flash to store the new operating system. The new operating system is 3.2MB in size. The network administrator then executes the commands shown in the exhibit.

Which action should the network administrator perform to solve this problem?

A. Reformat flash and execute the TFTP upgrade command.

- B. Execute the clear Flash command and perform the TFTP upgrade again.
- C. Execute the reset recycle-bin command and perform the TFTP upgrade again.
- D. Execute the delete eld.app command and execute the TFTP upgrade command.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

When you delete a file with HP switches, it moves the file to the recycle bin and the file still occupies storage space. To permanently delete the file from the recycle bin, execute the reset recycle-bin command in the original directory of the file.

QUESTION 17

Which command can a network administrator execute to manage configuration files on an HP

Real 25
HP HP0-Y49 Exam
Comware switch?

- A. Write file
- B. Startup-default
- C. Delete
- D. Write memory

QUESTION 24

Refer to the exhibit.

Exhibit: HP ProVision command output

Real 28

HP HP0-Y49 Exam

ProVision # show ip route static

IP Route Entries						
Destination	Gateway	VLAN	Type	Sub-Type	Metric	Dist.
10.10.20.177/32	reject		static		1	1
10.10.40.0/24	VLAN10	10	static		1	1
10.10.50.128/27	VLAN10	10	static		1	1
10.11.30.0/24	blackhole		static		1	1
127.0.0.0/8	reject		static		0	0

What does the term "blackhole" mean for the 10.11.30.0/24 route?

- A. The switch will drop all traffic sourced from 10.11.30.0/24 and will send an ICMP message to the source.
- B. The switch will drop all traffic sourced from 10.11.30.0/24 and will not send an ICMP message to the source.
- C. The switch will drop all traffic destined to 10.11.30.0/24 and will not send an ICMP message to the source.
- D. The switch will drop all traffic destined to 10.11.30.0/24 and will send an ICMP message to the source.

QUESTION 36

A customer has an HP ProVision switch capable of Layer 3 forwarding; however, Layer 3 forwarding is disabled. The switch has an IP address in the management VLAN, where the default gateway is 10.1.1.1, which ProVision command should the network administrator use so the ProVision switch can access the Intelligent Management Center (IMC) server in a different VLAN?

- A. IP default-gateway 10.1.1.1
- B. IP route 0.0.0.0 255.255.255.255 10.1.1.1
- C. Default-route 10.1.1.1
- D. IP route 0.0.0.0 0.0.0.0 10.1.1.1

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

A default route is a special static route that applies to all traffic. Typically, when the router receives a packet that it does not know how to forward, it drops it. A default route allows the router to forward all such packets toward the destination most likely to be able to route them. To configure a default route, enter a route to a destination address of all zeros with an all-zero subnet mask. The all-zero subnet mask indicates to the router that a packet's IP address does not have to match any of the destination address bits in order for the route to be valid. Because the

Real 35

HP HP0-Y49 Exam

router always matches traffic to the most specific route, it will only use the default route for traffic that would otherwise be dropped.

To configure the default route, move to the global configuration mode context and enter this command:

Syntax: ip route 0.0.0.0 [0.0.0.0 | /0] <next hop A.B.C.D | forwarding interface ID> [<administrative distance>]

The ProCurve Secure Router allows you to enter the default route in CIDR notation. Reference: <ftp://ftp.hp.com/pub/networking/software/B-C11-Routing.pdf>

QUESTION 37

On an HP Comware switch, which view must an administrator access in order to execute the debug command?

Requires devices to be 25 to 50 percent closer together than devices implementing the other 802.11 standards

▼

802.1n

802.1g

802.1a

802.1b

Section: (none)

Explanation

Explanation/Reference:

Is backward compatible with another 802.11 standard – 802.11g

Supports only the 2.4 Ghz frequency – 802.11b

Supports channel bonding – 802.11n

Requires devices to be 25 to 50% closer together than devices implementing the other 802.11 standards – 802.11a

QUESTION 44

All OSPF routers from adjacencies with other OSPF routers in each broadcast domain. What is the correct sequence of states when forming an adjacency with any OSPF router in the broadcast domain?

Step 1

Step 2

Step 3

Hot Area:

Step 1

Domain Static
Two-way state
Exchange state

Step 2

Domain Static
Two-way state
Exchange state

Step 3

Domain Static
Two-way state
Exchange state

Correct Answer:

Step 1

Domain Static

Two-way state

Exchange state

Step 2

Domain Static

Two-way state

Exchange state

Step 3

Domain Static

Two-way state

Exchange state

Section: (none)
Explanation

Explanation/Reference:
Step 1 – Two-way state
Step 2 – Exchange state
Step 3 – Domain Static

QUESTION 45

Which open standard allows a switch with PoE support to correctly determine the power requirements of a connected device?

- A. ICMP
- B. AutoPower
- C. LLDP-MED
- D. CDP

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

The Link Layer Discovery Protocol (LLDP) is a vendor-neutral link layer protocol in the Internet Protocol Suite used by network devices for advertising their identity, capabilities, and neighbors on an IEEE 802 local area network, principally wired Ethernet. Media Endpoint Discovery is an enhancement of LLDP, known as LLDP-MED, that provides the following facilities:

QUESTION 46

Which statement is true about wireless technologies?

- A. 802.11n uses MIMO technology to improve data rates
- B. 802.11g uses GIGO technology to improve security.
- C. 802.11b/g use an 802.11a-compatible frequency.
- D. 802.11a uses the less crowded 2.4 GHz range.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

IEEE 802.11n is an amendment to IEEE 802.11-2007 as amended by IEEE 802.11k-2008, IEEE 802.11r-2008, IEEE 802.11y-2008, and IEEE 802.11w-2009, and builds on previous 802.11 standards by adding multiple-input multiple-output (MIMO) and 40 MHz channels to the PHY (physical layer), and frame aggregation to the MAC layer. MIMO is a technology that uses multiple antennas to coherently resolve more information than possible using a single antenna. One way it provides this is through Spatial Division Multiplexing (SDM), which spatially multiplexes multiple independent data streams, transferred simultaneously within one spectral channel of bandwidth. MIMO SDM can significantly increase data throughput as the number of resolved spatial data streams is increased.

Real 2

HP HP0-Y49 Exam

QUESTION 47

Refer to the exhibit.

Exhibit HP Comware command output.

```
<Comware> display link-aggregation verbose bridge-aggregation 2
<-output omitted->
System ID: 0x8000, 000f-e267-6c6a
```

Local:

Port	Status	Priority	Oper-key	Flag
GE1/0/3	8	32768	2	(ACDEF)
GE1/0/4	8	32768	2	(ACDEF)

Remote:

Actor	Partner	Priority	Oper-key	SystemID	Flag
GE1/0/3	32	32768	2	0x8000, 000f-r267-57ad	(ACDEF)
GE1/0/4	26	32768	2	0x8000, 000f-r267-57ad	(ACDEF)

Examine this output from the Comware command shown in the exhibit. Based on the flag of ACDEF, what is the status of the aggregated link?

- A. Static LACP link aggregation is configured, and the aggregated link is operational with load sharing not being performed.
- B. Static LACP link aggregation is configured, and the aggregated link is operational with load sharing being performed.
- C. Static link aggregation is configured, and the aggregated link is operational with load sharing being performed.
- D. Static link aggregation is configured, and the aggregated link is operational with load sharing not being performed.

Correct Answer: B

Explanation:

QUESTION 48

Which HP ProVision switch command defines 10.1.1.1 as a syslog server?

- A. Info-center 10.1.1.1
- B. Syslog 10.1.1.1
- C. Logging 10.1.1.1
- D. Logserver 10.1.1.1

Real 3
HP HP0-Y49 Exam

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

The switch event log is stored in volatile memory and is lost on a reboot. It is best to configure a syslog server to handle the log on another server in non-volatile memory.

For syslog:

HP-Provision-Switch (config)# logging <IPv4 or IPv6 address> Reference: <http://h10032.www1.hp.com/ctg/Manual/c02667379.pdf>

QUESTION 49

Which command can a network administrator execute on an HP Commware switch to manage configuration files?

- A. Restore startup-configuration
- B. Erase startup-configuration
- C. Rename config
- D. Erase startup-config

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

Explanation:

http://www.h3c.com/portal/Technical_Support___Documents/Technical_Documents/Switches/H3C_S12500_Series_Switches/Configuration/Operation_Manual/H3C_S12500_CG-Release7128-6W710/01/201301/772595_1285_0.htm

QUESTION 50

Which type of access is considered an In-band management connection?

- A. Serial connection to Console port
- B. Dial-up to an auxiliary port
- C. SSH from a desktop to the device
- D. Telnet to an HP iLO management port

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

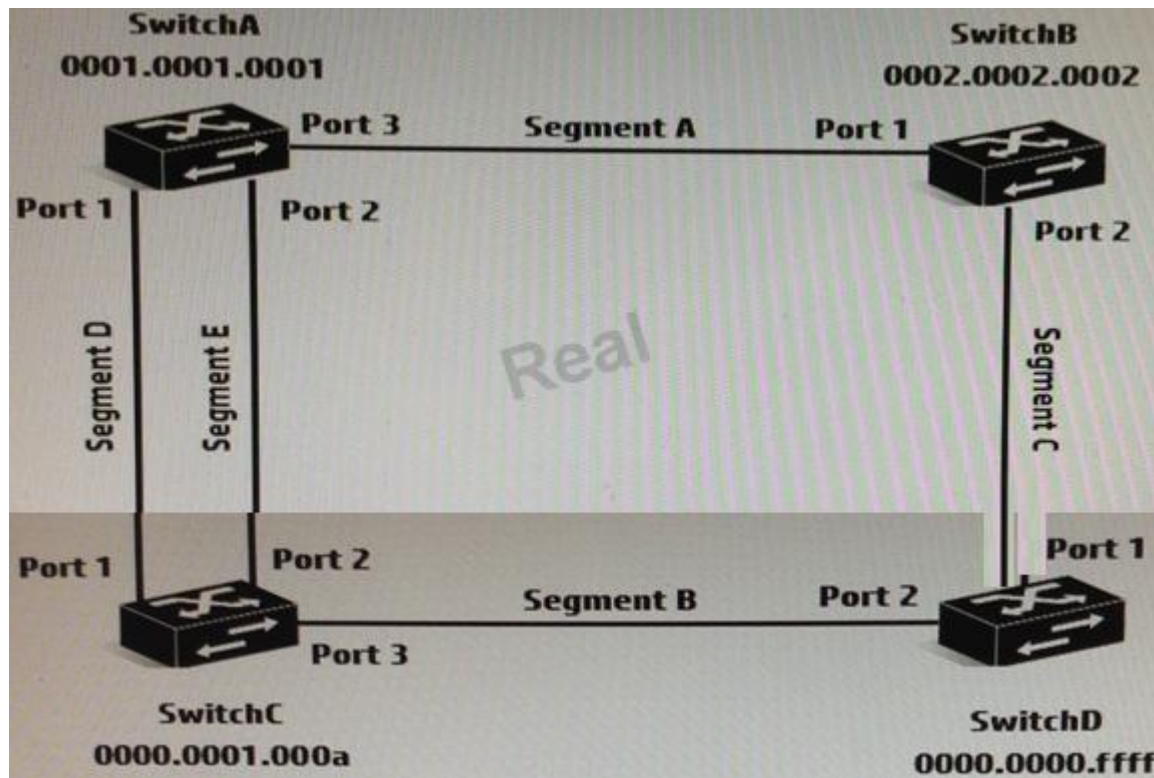

Explanation:

Real 4
HP HP0-Y49 Exam

QUESTION 51

Refer to the exhibit.

Exhibit: Network topology

A company has implemented a switched network based on the RSTP spanning tree protocol.
Assume the following:

- All switches have the same priority
- All ports have the same cost
- All ports have the same priority

Based on this information, which answer is correct?

- A. Port 2 on SwitchC is a designated port.
- B. Port 3 on SwitchC is a designated port.
- C. Port 1 on SwitchB is a discarding port.
- D. Port 1 on SwitchD is a root port.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

MSTP selects the device with the lowest MAC address as the root bridge, so in this case it is SwitchD. The root bridge is the only bridge in the network that does not have a root port. All other bridges receive BPDUs on at least one port.

Real 5

HP HP0-Y49 Exam

QUESTION 52

Which HP Comware component allows a network administrator to adjust the logging process?

- A. SNMP management center
- B. Information center
- C. Logging process
- D. System logging center

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

Acting as the system information hub, information center classifies and manages system information, offering a powerful support for network administrators and developers in monitoring network performance and diagnosing network problems.

The following describes the working process of information center:

QUESTION 53

What must a network administrator define on an HP Comware switch in order to implement username and passwords to protect access to the CLI?

- A. Authentication scheme
- B. Privilege levels
- C. Local authentication
- D. Super passwords

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

Authentication fallback

If all authentication servers are unavailable, local authentication can be used.

Real 6

HP HP0-Y49 Exam

QUESTION 54

Why does HP recommended using SSH instead of Telnet for remote device management?

- A. SSH connections are established almost five times faster.
- B. SSH encrypts the data you exchange with the switch.
- C. SSH must be enabled for TFTP file transfers.
- D. SSH provides a graphical shell for GUI management.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 55

Which wireless technology is limited to operate in a frequency range with only three non- overlapping channels?

- A. 802.1a
- B. 802.1x
- C. 802.1ad
- D. 802.11g

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

802.11b (and 802.11g) networks offer 11 channels, but only three channels (1, 6, and 11) do not overlap with each other. In a large-scale building or campus-wide installation, the ability to use only three channels can reduce real-world throughput and make avoiding interference from other 802.11b or 802.11g-based wireless networks difficult.

QUESTION 56

Which technology does the HP Virtual Connect support?

- A. InfiniBand connection to server backplane
- B. Fibre Channel over Ethernet (FCoE) V
- C. Distributed trunking
- D. Intelligent Resilient Framework (IRF)

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Real 7

HP HP0-Y49 Exam

Explanation:

Virtual Connect interconnect modules provide the following capabilities:

- Reduces the number of cables required for an enclosure, compared to using pass-thru modules.
- Reduces the number of edge switches that LAN and SAN administrators must manage.
- Allows pre-provisioning of the network, so server administrators can add, replace, or upgrade servers without requiring immediate involvement from the LAN or SAN administrators.
- Enables a flatter, less hierarchical network, which reduces equipment and administration costs, reduces latency, and improves performance.
- Delivers direct server-to-server connectivity within the BladeSystem enclosure. This is an ideal way to optimize for east/west traffic flow, which is becoming more prevalent at the server edge with the growth of server virtualization, cloud computing, and distributed applications. Reference: <http://>

QUESTION 57

Refer to the exhibit.

Exhibit Comware switch output.

[Comware] display link-aggregation verbose bridge-aggregation 1

<- output omitted ->

Local:

Port	Status	Priority	Oper-key	Flag
<hr/>				
GE1/0/3	U	32768	2	(AG)
GE1/0/4	U	32768	2	(AG)

Remote

<- output omitted ->

A network administrator has implemented link aggregation on an HP Comware switch using LACP. Assume the two ports are functioning at the data link layer between the Comware switch neighboring switch. The network administrator execution display link-aggregation verbose command and notices the flag of AG for the two links. As shown in the exhibit.

What does this indicate?

Real 8
HP HP0-Y49 Exam

- A. The link is marked as a backup because there are already eight active links in the aggregation
- B. The link is up, but LACP failed the negotiation on the port
- C. The link is down
- D. The link is up, but LACP has been disabled on the port.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

Explanation:

Port Status: S -- Selected, U -- Unselected

Flags: A -- LACP_Activity, B -- LACP_Timeout, C -- Aggregation, D -- Synchronization, E -- Collecting, F -- Distributing, G -- Defaulted, H -- Expired

The flag is a one-octet LACP state flags field. From the least to the most significant bit, they are represented by A through H as follows:

A indicates whether LACP is enabled. 1 for enabled and 0 for disabled. B indicates the timeout control value. 1 for short timeout, and 0 for long timeout.

C indicates whether the link is considered as aggregatable by the sending system. 1 for true, and 0 for false.

D indicates whether the link is considered as synchronized by the sending system. 1 for true, and 0 for false.

E indicates whether the sending system considers that collection of incoming frames is enabled on the link. 1 for true and 0 for false.

F indicates whether the sending system considers that distribution of outgoing frames is enabled on the link. 1 for true and 0 for false.

G indicates whether the receive state machine of the sending system is using default operational partner information. 1 for true and 0 for false. H

indicates whether the receive state machine of the sending system is in the expired state. 1 for true and 0 for false.

QUESTION 58

Refer to the exhibit.

Exhibit Switch configuration

Real 9

HP HP0-Y49 Exam

```
[Comware] interface bridge-aggregation 1
[Comware-Bridge-Aggregation1] link-aggregation mode dynamic
[Comware-Bridge-Aggregation] quit
[Comware] interface g1/0/1
[Comware-GigabitEthernet1/0/1] port link-aggregation group 1
[Comware-GigabitEthernet1/0/1] quit
[Comware] interface g1/0/2
[Comware-GigabitEthernet1/0/2] port link-aggregation group 1
[Comware-GigabitEthernet1/0/2] quit
[Comware] interface bridge-aggregation 1
[ComwareBridge-Aggregation1] port link-type trunk
[Comware-Bridge-Aggregation] port trunk permit vlan 100 200
```

```
ProVision (config) # A1-A2 trk1 trunk
ProVision (config) # vlan untagged trk1
ProVision (config) # vlan 100 tagged trk1
ProVision (config) # vlan tagged trk1
```

A network administrator is configuring an aggregated link between an HP Comware and ProVision switch. The network administrator applies the configurations to the switches, as shown in the exhibit. The two links on the both switches are up, and they can see each other on both links in the local

LLDP table.

What will be the outcome?

- A. The ProVision switch must initiate LACP for the link become active
- B. Link aggregation fails because the VLAN tagging was not configured correctly
- C. The Commware switch must initiate LACP for the link to become active
- D. Link aggregation fails because of a protocol issue

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 59

When LLDP is enabled, which value is presented by default as the LLDP Chassis ID on both ProVision and Comware switches?

- A. Router ID
 - B. System Name
 - C. IP address
 - D. MAC address

Explanation:

QUESTION 62

A network administrator executes these commands on an HP Comware switch:

```
[Comware] super password level 1 simple hp1
```

```
[Comware] super password level 2 simple hp2
```

```
[Comware] super password level 3 simple hp3
```

```
[Comware] quit
```

```
<Comware>
```

The network administrator then executes this command to test the configuration:

```
<Comware> super 0
```

What is the outcome of the configuration?

Real 12

HP HP0-Y49 Exam

- A. The network administrator is immediately placed into Monitor view.
- B. Access is denied because no level 0 password has been defined.
- C. A password of hp0 must be entered to access the view.
- D. The network administrator is immediately placed into visitor view.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

answer is valid.

QUESTION 63

Which statement is true about BPDU-Protection on HP Comware switches?

- A. BPDU-Protection is enabled on the root switches globally and will detect rogue switches on downlink ports.
- B. BPDU-Protection is enabled on the root switches, downlink ports and will detect rogue switches on those ports.
- C. BPDU-Protection is enabled globally and will detect rogue switches on edge ports.
- D. BPDU-Protection is enabled per port and will detect rogue switches on those ports.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

Explanation:

QUESTION 64

Which STP protection feature does HP recommended against rogue switches?

- A. Root Protection should be enabled on access layer switches.
- B. BPDU Protection should be enabled on edge ports and uplink ports.
- C. Root Protection should be enabled on access and aggregation layer switches.
- D. BPDU Protection should be enabled on edge ports.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

Explanation:

We want to enable BPDU protection on any "edge ports", or ports that are connected to end user devices (PCs, printers, etc.) -- any device that should not be sending out STP BPDU's. Without BPDU protection, a malicious (or ignorant) user could plug a switch into our network and alter the spanning tree topology.
