Among other directives, your module's layout xml file contains the following code:

```
<catalog_product_view>
    <reference name="product.info">
        <action method="setTemplate">
            <template>my/product/view.phtml</template>
        </action>
    </reference>
</catalog_product_view>
```

But using the template path hints, you can see that a template custom/product/view.phtml is used instead of your template. Which THREE of the following options can be causing the issue? (Choose three)

- A. Another module, which is loaded later, calls setTemplate () again on the same block.
- B. Your template file my/product/view, phtml cannot be found in the current theme.
- C. Another module is rewriting the catalog/product\_view block to change the template in the method \_beforeToHtml().
- D. Your layout xml file is not found within the theme fallback directories.
- E. Another module is rewriting the catalog/productjview block to change the template in the method construct().
