Administering Microsoft System Center Configuration Manager and Cloud Services Integration (Beta)

Exam E

QUESTION 1

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a deployment of System Center Configuration Manager (Current Branch).

You configure hybrid mobile device management (MDM).

You have a support technician named User1.

Your company purchases 300 Apple iPhones.

You need to ensure that User1 can enroll the iPhones.

Solution: From Default Client Settings, you set an enrollment profile.

Does this meet the goal?

<https://vceplus.com/>

- A. Yes
- B. No

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/mdm/deploy-use/enroll-devices-with-device-enrollment-manager>

QUESTION 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a deployment of System Center Configuration Manager (Current Branch).

You configure hybrid mobile device management (MDM).

You have a support technician named User1.

Your company purchases 300 Apple iPhones.

You need to ensure that User1 can enroll the iPhones.

Solution: From the Microsoft Intune Subscription Properties, you add User1 as a Device Enrollment Manager.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/mdm/deploy-use/enroll-devices-with-device-enrollment-manager>

QUESTION 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a deployment of System Center Configuration Manager (Current Branch).

You configure hybrid mobile device management (MDM).

You have a support technician named User1.

Your company purchases 300 Apple iPhones.

You need to ensure that User1 can enroll the iPhones.

Solution: From a web browser, you request an Enrollment Agent certificate from a certification authority (CA).

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/mdm/deploy-use/enroll-devices-with-device-enrollment-manager>

QUESTION 4

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a deployment of System Center Configuration Manager (Current Branch).

You configure hybrid mobile device management (MDM).

You have a support technician named User1.

Your company purchases 300 Apple iPhones.

You need to ensure that User1 can enroll the iPhones.

Solution: From the Configuration Manager console, you assign the Infrastructure Administrator security role to User1.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/mdm/deploy-use/enroll-devices-with-device-enrollment-manager>

QUESTION 5

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.

You work for a company named ADatum Corporation.

The ADatum network contains an Active Directory domain named adatum.com.

You have a partner company named Contoso, Ltd. The Contoso network contains an Active Directory domain named adatum.com.

All the client computers at both companies run Windows 10.

Each company has a deployment of System Center Configuration Manager (Current Branch).

ADatum has sales and IT departments. ADatum has a collection for each department.

Contoso has research, marketing, and human resources (HR) departments. Contoso has a collection for each department.

ADatum purchases Contoso.

You configure on-premises mobile device management (MDM) in adatum.com. You enroll the client computers in the IT department into on-premises MDM.

You configure hybrid MDM in contoso.com.

End of repeated scenario.

You need to enroll the client computers in the sales department into MDM.

What should you do on the sales department computers?

- A. Install the Configuration Manager client.
- B. Run the `Add-Computer` cmdlet.
- C. Use the Settings app to connect the computers to a work or school account.
- D. Install the Microsoft Intune software client.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/mdm/deploy-use/user-enroll-devices-on-premises-mdm>

QUESTION 6

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.

You work for a company named ADatum Corporation.

The ADatum network contains an Active Directory domain named `adatum.com`.

You have a partner company named Contoso, Ltd. The Contoso network contains an Active Directory domain named `adatum.com`.

All the client computers at both companies run Windows 10.

Each company has a deployment of System Center Configuration Manager (Current Branch).

ADatum has sales and IT departments. ADatum has a collection for each department.

Contoso has research, marketing, and human resources (HR) departments. Contoso has a collection for each department.

ADatum purchases Contoso.

You configure on-premises mobile device management (MDM) in `adatum.com`. You enroll the client computers in the IT department into on-premises MDM.

You configure hybrid MDM in `contoso.com`.

End of repeated scenario.

You need to enroll the computers of the managers into MDM.

What are two possible ways to achieve the goal? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Instruct the managers to run the `Add-Computer` cmdlet.
- B. Distribute a provisioning package to the managers. Instruct the managers to run the provisioning package.
- C. Instruct the managers to use the Settings app to connect to a work or school account.
- D. Instruct the managers to modify the network ID from the System settings.

Correct Answer: BC

Section: (none)

Explanation

Explanation/Reference:

References:

<https://docs.microsoft.com/en-us/windows/client-management/mdm/bulk-enrollment-using-windows-provisioning-tool> <https://docs.microsoft.com/en-us/sccm/mdm/deploy-use/user-enroll-devices-on-premises-mdm>

QUESTION 7

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.

You work for a company named ADatum Corporation.

The ADatum network contains an Active Directory domain named adatum.com.

You have a partner company named Contoso, Ltd. The Contoso network contains an Active Directory domain named adatum.com.

All the client computers at both companies run Windows 10.

Each company has a deployment of System Center Configuration Manager (Current Branch).

ADatum has sales and IT departments. ADatum has a collection for each department.

Contoso has research, marketing, and human resources (HR) departments. Contoso has a collection for each department.

ADatum purchases Contoso.

You configure on-premises mobile device management (MDM) in adatum.com. You enroll the client computers in the IT department into on-premises MDM.

You configure hybrid MDM in contoso.com.

End of repeated scenario.

You need to ensure that when the users at Contoso enroll into MDM, they accept the usage policy of Contoso.

What should you do?

<https://vceplus.com/>

- A. From Microsoft Intune in the Microsoft Azure portal, click **Device compliance** and configure the Compliance policy settings.
- B. From the Configuration Manager console, open the **Assets and Compliance** workspace and configure the terms and conditions.
- C. From Microsoft Intune in the Microsoft Azure portal, click **Device enrollment** and configure the terms and conditions.
- D. From the Configuration manager console, open the **Assets and Compliance** workspace and configure a compliance policy.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/mdm/deploy-use/terms-and-conditions>

QUESTION 8

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.

You work for a company named ADatum Corporation.

The ADatum network contains an Active Directory domain named adatum.com.

You have a partner company named Contoso, Ltd. The Contoso network contains an Active Directory domain named adatum.com.

All the client computers at both companies run Windows 10.

Each company has a deployment of System Center Configuration Manager (Current Branch).

ADatum has sales and IT departments. ADatum has a collection for each department.

Contoso has research, marketing, and human resources (HR) departments. Contoso has a collection for each department.

ADatum purchases Contoso.

You configure on-premises mobile device management (MDM) in adatum.com. You enroll the client computers in the IT department into on-premises MDM.

You configure hybrid MDM in contoso.com.

End of repeated scenario.

You need to view a detailed hardware inventory of an IT department computer that is currently offline.

Which tool should you use?

- A. Resource Explorer
- B. Device Manager
- C. Microsoft Intune in the Microsoft Azure portal
- D. the Microsoft Azure portal

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 9
DRAG DROP

You have a deployment of System Center Configuration Manager (Current Branch).

You configure hybrid mobile device management (MDM).

You need to ensure that you can manage Apple iOS devices by using Configuration Manager.

Which four actions should you perform in sequence? To answer, move the appropriate actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

Add an Apple Volume Purchase Program token to Configuration Manager.

Upload an Apple Push Notification (APN) certificate to Microsoft Intune,

Download sideloading keys,

Download an Apple Push Notification (APN) certificate,

Submit a request to the Apple Push Notification Certification Portal,

Create an Apple Push Notification (APN) certificate request,

Answer Area

Correct Answer:

Actions

Add an Apple Volume Purchase Program token to Configuration Manager.
Download sideloading keys.

Answer Area

	Create an Apple Push Notification (APN) certificate request.	
	Download an Apple Push Notification (APN) certificate.	
⬅	Submit a request to the Apple Push Notification Certification Portal.	⬆
➡	Upload an Apple Push Notification (APN) certificate to Microsoft Intune.	⬇

Explanation

Explanation/Reference:

References: <https://www.systemcenterdudes.com/enroll-ios-device-sccm/> **QUESTION 10** DRAG DROP

You have a deployment of System Center Configuration Manager (Current Branch).

You configure hybrid mobile device management (MDM).

You use Configuration Manager to manage Apple iOS and Android devices.

You need to prevent users of the devices from incurring roaming data charges.

What should you configure for each device? To answer, drag the appropriate configurations to the correct devices. Each configuration may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Configurations

- A client device setting
- A client user setting
- A configuration item
- A Configuration Manager application
- A VPN profile
- A Wi-Fi profile

Answer Area

Android devices: Configuration

iOS devices: Configuration

...

Correct Answer:

Configurations

- A client device setting
- A client user setting
- A configuration item
- A Configuration Manager application
- A VPN profile
- A Wi-Fi profile

Answer Area

Android devices: A configuration item

iOS devices: A configuration item

Section: (none)

Explanation

Explanation/Reference:

QUESTION 11

You have a deployment of System Center Configuration Manager (Current Branch).

You configure hybrid mobile device management (MDM).

You need to enroll company-owned Android devices into MDM.

What should you do first?

- A. Install the Company Portal app on the Android devices.
- B. Create predeclared devices in Configuration Manager.
- C. Create computer objects in Active Directory for the Android devices.
- D. Purchase a Microsoft Office 365 subscription.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 12

DRAG DROP

You have a deployment of System Center Configuration Manager (Current Branch).

You configure hybrid mobile device management (MDM).

<https://vceplus.com/>

Your company hires a new employee. The employee has an Apple iPhone.

You make several iOS apps available to the employee. The employee reports that the apps are unavailable on the iPhone.

You need to ensure that the employee can use the apps.

Which two actions should you instruct the employee to perform? To answer, drag the appropriate actions to the correct targets. Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Actions	Answer Area
Enroll the device.	First action: Action
Add a license key.	Second action: Action
Install a trusted root certificate.	
Connect to the company's Wi-Fi network.	
Install the Microsoft Intune Company Portal app.	

Correct Answer:

Actions

- Enroll the device.
- Add a license key.
- Install a trusted root certificate.
-
-

Answer Area

- First action: Install the Microsoft Intune Company Portal app.
- Second action: Connect to the company's Wi-Fi network.

Section: (none)
Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/mdm/deploy-use/enroll-user-owned-devices>

QUESTION 13

You have a deployment of System Center Configuration Manager (Current Branch).

You configure hybrid mobile device management (MDM).

Your company allows users to use their personal devices to access corporate data.

A user named User1 has a personal tablet that runs Windows 10. The tablet is enrolled in Microsoft Intune.

User1 leaves the company.

You plan to perform a selective wipe of the tablet.

What will be deleted from the tablet?

- A. all the apps that are installed from the Microsoft Store for Business
- B. all the files located in %ProgramData%\Package Cache
- C. all the user profiles
- D. all the files located in %USERPROFILE%\AppData\Roaming

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/mdm/deploy-use/wipe-lock-reset-devices>

QUESTION 14

You deploy System Center Configuration Manager (Current Branch).

You need to implement the co-management of Windows 10 devices.

Which two components should you deploy before you can configure co-management? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. a cloud management gateway
- B. the Microsoft Operations Management Suite (OMS) connector
- C. a Microsoft Intune subscription
- D. the Microsoft Store for Business
- E. a Microsoft Office 365 subscription

Correct Answer: AC

Section: (none)

Explanation**Explanation/Reference:**

References: <https://docs.microsoft.com/en-us/sccm/core/clients/manage/co-management-prepare>

QUESTION 15

You have a deployment of System Center Configuration Manager (Current Branch). The Install Behavior for applications feature is enabled.

You have a line-of-business application named App1. Version 1.0 of App1 is deployed currently.

You need to upgrade App1 to version 2.0. Version 2.0 must be prevented from installing if App1.exe is running.

What should you do?

- A. Create a virtual application for version 2.0 of App1. Create a detection method for App1.exe.
- B. Create an application for version 2.0 of App1. Modify the Deployment Types and the Install Behavior settings.
- C. Modify the Deployment Types and the Install Behavior settings for version 1.0 of App1.
- D. Create a virtual application for version 1.0 of App1. Create a detection method for App1.exe.

Correct Answer: C

Section: (none)

Explanation

**Explanation/Reference:**

References: <https://docs.microsoft.com/en-us/sccm/apps/deploy-use/deploy-applications#how-to-check-for-running-executable-files-before-installing-an-application>

QUESTION 16

You have a deployment of System Center Configuration Manager (Current Branch).

You deploy several Microsoft Store for Business apps to client computers by using Configuration Manager.

You purchase a new Microsoft Store for Business app named App1. App1 is licensed for offline use.

You need to ensure that you can deploy App1 immediately by using Configuration Manager.

What should you do?

- A. From the Configuration Manager console, synchronize the Windows Store for Business.
- B. From the Microsoft Azure portal, add App1 to Azure Active Directory.

- C. From the Configuration Manager console, run the Azure Services Wizard.
- D. From Microsoft Intune in the Microsoft Azure portal, add App1 to Intune.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

References: <https://www.petervanderwoude.nl/post/windows-store-for-business-synchronized-with-configmgr/>

QUESTION 17

Your network contains an Active Directory forest named adatum.com. All client computers run Windows 10.

You have a deployment of System Center Configuration Manager (Current Branch) that contains a primary site named S01. S01 contains the servers shown in the following table.

Server name	Site system role
Server1	Software update point
Server2	Distribution point
Server3	Service connection point

You plan to use Configuration Manager to deploy software updates.

You create a software update group named UpdateGroup1.

You need to ensure that you can deploy express installation files to the client computers.

What should you configure?

- A. the Software update point Properties of Server1
- B. the Distribution point Properties of Server2
- C. the Software Update Point Component Properties of S01
- D. the Service connection point Properties of Server3

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/sum/deploy-use/manage-express-installation-files-for-windows-10-updates>

QUESTION 18

You have a deployment of System Center Configuration Manager (Current Branch).

You use Configuration Manager to deploy Windows 10.

You discover that newly deployed images of Windows 10 are missing several Windows 10 updates.

When you attempt to deploy the updates by using the Schedule Updates Wizard, the process fails, and you receive the following error message: “Failed to apply one or more updates.”

Which log file should you view to get additional information about the failure?

- A. ScanAgent.log
- B. UpdatesHandler.log
- C. OfflineServicingMgr.log
- D. UpdatesDeployment.log
- E. WUAHandler.log

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

References: <https://technet.microsoft.com/en-us/library/hh427342.aspx>

QUESTION 19

You have a deployment of System Center Configuration Manager (Current Branch) that has a management point and a distribution point.

You have 1,000 Configuration Manager clients that run Windows 10.

You open the **Windows 10 Servicing** dashboard and discover that no data appears.

You need to ensure that servicing data is available on the dashboard.

What should you do?

- A. Configure a software inventory.
- B. Configure a hardware inventory.
- C. Add a reporting services point and configure the report options.
- D. Add a service connection point and a software update point.

Correct Answer: D

Section: (none)

Explanation

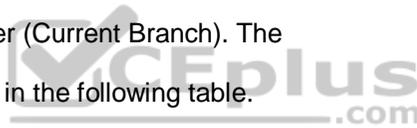

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/osd/deploy-use/manage-windows-as-a-service>

QUESTION 20

HOTSPOT

You have a deployment of System Center Configuration Manager (Current Branch). The software updates available in Configuration Manager are shown in the following table.

<https://vceplus.com/>

Update title	Product	Required
Update for Windows 10 (KB3125217)	Windows 10 LTSC, Windows 10	3
Security Update for Adobe Flash Player for Windows 10 (KB4014329)	Windows 10 LTSC, Windows 10	5
Definition Update for Windows Defender – KB2267602 (Definition 1.239.999.0)	Windows Defender	10
Update for Windows 10 (KB3173427)	Windows 10 LTSC, Windows 10	0

You create the automatic deployment rules (ADRs) as shown in the following table.

ADR name	Software update search criteria	Deployment package to create
ADR1	Required: >2 Title: -Adobe	Package1
ADR2	Product: "Windows 10" Title: update	Package2

You ran ADR1 and ADR2.

How many updates are in Package1 and Package2? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Number of software updates in Package1:

	▼
0	
1	
2	
3	
4	

Number of software updates in Package2:

	▼
0	
1	
2	
3

QUESTION 21

You have a deployment of System Center Configuration Manager (Current Branch).

You have the servers shown in the following table.

Server name	Site system role	Operating system
CM01	Primary site server, Management point	Windows Server 2012 R2
CM02	Distribution point	Windows Server 2012 R2

You have one subnet that contains all the servers and several subnets that contain client computers. A firewall restricts network traffic to the server subnet.

You install a new server named CM03 that runs Windows Server 2016. You install Windows Server Update Services (WSUS) on CM03 by using the default options. You configure CM03 as the software update point.

You need to ensure that the client computers can access the software update point.

Which port should you open on the firewall?

- A. 80
- B. 443
- C. 8080
- D. 8530

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

References: https://technet.microsoft.com/en-us/library/hh427328.aspx#BKMK_PortsSUP-WSUS

QUESTION 22

You have a deployment of System Center Configuration Manager (Current Branch).

You need to create a task sequence to deploy Windows 10.

Which two components should you include in the task sequence? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. a driver package
- B. an operating system image
- C. software updates
- D. a boot image

Correct Answer: BD

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/osd/deploy-use/create-a-task-sequence-to-install-an-operating-system>

QUESTION 23

You have a deployment of System Center Configuration Manager (Current Branch) that contains a primary site named S01. S01 has the Software update point site system role installed on a server named Server01 and the Distribution point site system role installed on a server named Server02.

You need to configure when Configuration Manager can install updates on the site system servers.

What should you configure?

- A. the Properties of the S01 site
- B. the Distribution point Properties of Server02
- C. the Software update point Properties of Server01
- D. the Software Update Point Component Properties of S01

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/sum/get-started/manage-settings-for-software-updates>

QUESTION 24

HOTSPOT

You have a deployment of System Center Configuration Manager (Current Branch).

Configuration Manager includes the collections shown in the following table.

Collection name	Collection members
Collection1	Computer1, Computer2
Collection2	Computer2, Computer3
Collection3	Computer3

Configuration Manager has the following antimalware policies defined as shown in the following table.

Policy name	Priority	Deployed to	Scheduled scan time
Default Client Antimalware Policy	10,000	<i>Not applicable</i>	02:00
Settings1	2	Collection1	04:00
Settings2	3	Collection1	12:00
Settings3	1	Collection2	<i>Not applicable</i>
Settings4	4	Collection3	<i>Not applicable</i>

When are the scheduled scan times for Computer1, Computer2, and Computer3? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Computer1 :

	▼
02:00	
04:00	
12:00	
Never	

Computer2 :

	▼
02:00	
04:00	
12:00	
Never	

Computer3 :

QUESTION 25

You deploy System Center Configuration Manager (Current Branch).

You need to manage the malware settings for Configuration Manager clients.

What should you do first?

- A. Add an Endpoint Protection point.
- B. Disable Windows Defender.
- C. Create a configuration baseline.
- D. Create a compliance policy.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/protect/deploy-use/endpoint-protection-configure>

QUESTION 26

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.

Your network contains an Active directory forest named adatum.com.

All client computers run Windows 10 Enterprise. All the computers are named by using the name of their respective department and an incremental three-digit number. For example, the first computer in the sales department is named Sales001.

Several managers use tablets that run Windows 10 and have 3 GB of RAM. All other client computers have at least 8 GB RAM.

Adatum.com is synchronized to Microsoft Azure Active Directory.

Your company implements the Microsoft Store for Business.

You have a deployment of System Center Configuration Manager (Current Branch) that has discovery configured. All the client computers have the Configuration Manager client installed.

The company uses the applications shown in the following table.

Application name	Description
App1	A Microsoft Application Virtualization (App-V) virtual application
App2	An app that the company purchased from the Microsoft Store for Business and is licensed for offline use
App3	A 64-bit application that is deployed to all the client computers
SalesAppLite	An application used by users in the sales department on computers that have 3 GB of RAM or less
SalesAppFull	An application used by the sales department users on computers that have more than 3 GB of RAM

The company identifies the following requirements for software deployments:

- View the Upgrade Readiness data of all the client computers.
- Deploy App1 to the client computers in the marketing department.
- Deploy App2 to the client computers in the human resources (HR) department.
- Monitor the usage of App3.
- Deploy SalesAppLite to sales department computers that have 3 GB of RAM or less.
- Deploy SalesAppFull to sales department computers that have more than 3 GB of RAM.

You create a cloud-based distribution point that has a public name of d1594d4527614a09b934d470.

End of repeated scenario.

You need to ensure that you can deploy App1 to the marketing department computers.

What should you do?

- A. Download the App-V client and install the client by using a Group Policy object (GPO).
- B. Sequence App1 by using the App-V Sequencer.
- C. Download the App-V client and deploy the client by using a Configuration Manager application.

D. Deploy a Group Policy object (GPO) that enables the App-V client.

Correct Answer: D

Section: (none)

QUESTION 27

HOTSPOT

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.

Your network contains an Active directory forest named adatum.com.

All client computers run Windows 10 Enterprise. All the computers are named by using the name of their respective department and an incremental three-digit number. For example, the first computer in the sales department is named Sales001.

Several managers use tablets that run Windows 10 and have 3 GB of RAM. All other client computers have at least 8 GB RAM.

Adatum.com is synchronized to Microsoft Azure Active Directory.

Your company implements the Microsoft Store for Business.

You have a deployment of System Center Configuration Manager (Current Branch) that has discovery configured. All the client computers have the Configuration Manager client installed.

The company uses the applications shown in the following table.

Application name	Description
App1	A Microsoft Application Virtualization (App-V) virtual application
App2	An app that the company purchased from the Microsoft Store for Business and is licensed for offline use
App3	A 64-bit application that is deployed to all the client computers
SalesAppLite	An application used by users in the sales department on computers that have 3 GB of RAM or less
SalesAppFull	An application used by the sales department users on computers that have more than 3 GB of RAM

The company identifies the following requirements for software deployments:

- View the Upgrade Readiness data of all the client computers.
- Deploy App1 to the client computers in the marketing department.
- Deploy App2 to the client computers in the human resources (HR) department.
- Monitor the usage of App3.
- Deploy SalesAppLite to sales department computers that have 3 GB of RAM or less.
- Deploy SalesAppFull to sales department computers that have more than 3 GB of RAM.

You create a cloud-based distribution point that has a public name of d1594d4527614a09b934d470.

End of repeated scenario.

The company creates a new department named research.

You need to deploy App2 and App3 to the client computers in the research department.

How should you configure the membership rule for the Research collection? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

QUESTION 28

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.

Your network contains an Active directory forest named adatum.com.

All client computers run Windows 10 Enterprise. All the computers are named by using the name of their respective department and an incremental three-digit number. For example, the first computer in the sales department is named Sales001.

Several managers use tablets that run Windows 10 and have 3 GB of RAM. All other client computers have at least 8 GB RAM.

Adatum.com is synchronized to Microsoft Azure Active Directory.

Your company implements the Microsoft Store for Business.

You have a deployment of System Center Configuration Manager (Current Branch) that has discovery configured. All the client computers have the Configuration Manager client installed.

The company uses the applications shown in the following table.

Application name	Description
App1	A Microsoft Application Virtualization (App-V) virtual application
App2	An app that the company purchased from the Microsoft Store for Business and is licensed for offline use
App3	A 64-bit application that is deployed to all the client computers
SalesAppLite	An application used by users in the sales department on computers that have 3 GB of RAM or less
SalesAppFull	An application used by the sales department users on computers that have more than 3 GB of RAM

The company identifies the following requirements for software deployments:

- View the Upgrade Readiness data of all the client computers.
- Deploy App1 to the client computers in the marketing department.
- Deploy App2 to the client computers in the human resources (HR) department.
- Monitor the usage of App3.
- Deploy SalesAppLite to sales department computers that have 3 GB of RAM or less.
- Deploy SalesAppFull to sales department computers that have more than 3 GB of RAM.

You create a cloud-based distribution point that has a public name of d1594d4527614a09b934d470.

End of repeated scenario.

You need to create the Upgrade Readiness report.

Which Group Policy object (GPO) setting should you configure?

- A. Diagnostics: Configure Scenario Execution Level
- B. Specify intranet Microsoft update service location
- C. Configure the Commercial ID
- D. Configure forwarder resource usage
- E. Audit Other Account Logon Events

Correct Answer: C

Section: (none)

QUESTION 30

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.

Your network contains an Active directory forest named adatum.com.

All client computers run Windows 10 Enterprise. All the computers are named by using the name of their respective department and an incremental three-digit number. For example, the first computer in the sales department is named Sales001.

Several managers use tablets that run Windows 10 and have 3 GB of RAM. All other client computers have at least 8 GB RAM.

Adatum.com is synchronized to Microsoft Azure Active Directory.

Your company implements the Microsoft Store for Business.

You have a deployment of System Center Configuration Manager (Current Branch) that has discovery configured. All the client computers have the Configuration Manager client installed.

The company uses the applications shown in the following table.

Application name	Description
App1	A Microsoft Application Virtualization (App-V) virtual application
App2	An app that the company purchased from the Microsoft Store for Business and is licensed for offline use
App3	A 64-bit application that is deployed to all the client computers
SalesAppLite	An application used by users in the sales department on computers that have 3 GB of RAM or less
SalesAppFull	An application used by the sales department users on computers that have more than 3 GB of RAM

The company identifies the following requirements for software deployments:

- View the Upgrade Readiness data of all the client computers.
- Deploy App1 to the client computers in the marketing department.
- Deploy App2 to the client computers in the human resources (HR) department.
- Monitor the usage of App3.
- Deploy SalesAppLite to sales department computers that have 3 GB of RAM or less.
- Deploy SalesAppFull to sales department computers that have more than 3 GB of RAM.

You create a cloud-based distribution point that has a public name of d1594d4527614a09b934d470.

End of repeated scenario.

You need to meet the requirements for the HR department computers.

Which two actions should you perform? Each correct answer presents part of solution.

NOTE: Each correct selection is worth one point.

- A. Add the Microsoft Store for Business service to the Configuration Manager console.
- B. Create an App-V package.
- C. Add a cloud management gateway.
- D. Configure the Microsoft Operations Management Suite (OMS) connector.
- E. Create an application in Configuration Manager.

Correct Answer: AE

QUESTION 31

HOTSPOT

You have a deployment of System Center Configuration Manager (Current Branch).

Your company has offices in Paris and Boston.

All client computers run Windows 7.

You plan to migrate all the computers to Windows 10 by using task sequences in Configuration Manager. All the hard drives will be reformatted during the migration.

You need to meet the following requirements:

- For the computers in the Boston office, the user data and settings must be retained.
- For the computers in the Paris office, users must be able to select which applications to install.

What should you use in each office? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

QUESTION 32

You have a deployment of System Center Configuration Manager (Current Branch) that was implemented by a user named Admin1.

Configuration Manager includes the administrative users shown in the following table:

User name	Security role	Security scope
User1	Infrastructure Administrator	Default, Scope1
User2	Asset Manager	Scope1
User3	Full Administrator	Default
User4	Operating System Deployment Manager	Scope1
User5	Operating System Deployment Manager	Default
User6	Operations Administrator	Scope1
User7	Operations Administrator	Default
User8	Company Resource Access Manager	Default, Scope1

You add a boot image named Boot1 to Configuration Manager. You set the security scope of Boot1 to **Scope1**.

Which user can create a task sequence that uses Boot1?

- A. User4
- B. User5
- C. User7
- D. User1

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

References: <https://technet.microsoft.com/en-us/library/gg682108.aspx>

QUESTION 33

You install the System Center Configuration Manager client on a computer.

When you check the Configuration Manager console, the computer does not appear in the console. Other computers appear in the console.

You need to review the Configuration Manager logs for the computer.

What should you use?

- A. the `cmtrace.exe` command
- B. the Configuration Manager console
- C. the `statview.exe` command
- D. the Event Viewer console

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 34

You have a deployment of System Center Configuration Manager (Current Branch).

You configure reporting in Configuration Manager and verify that users can view reports.

You need to ensure that the users can subscribe to the reports and that the reports are delivered by using email.

What should you do?

- A. In Active Directory Users and Computers, configure the email address of the users.
- B. In Configuration Manager, configure the Report Options.
- C. In Reporting Services Configuration Manager, configure the E-mail Settings.
- D. In Microsoft SQL Server Management Studio, configure Database Mail.

Correct Answer: C

Section: (none)

Explanation

QUESTION 35

You have a device collection named Collection1.

Currently, you use an automated deployment rule (ADR) to deploy updates as quickly as possible to Collection1.

You need to ensure that the updates are installed during a predefined period of time. The solution must affect the updates only.

What should you do?

- A. From the Membership Rules tab of Collection1, schedule an incremental update of the collection.
- B. From the Maintenance Windows tab of Collection1, create a new schedule that applies to all deployments.
- C. From the Membership Rules tab of Collection1, schedule a full update of the collection.
- D. From the Maintenance Windows tab of Collection1, create a new schedule that applies to software updates only.

Correct Answer: D

Section: (none)

Explanation

QUESTION 36

HOTSPOT

Your network contains an Active Directory forest named adatum.com. The forest has a deployment of System Center Configuration Manager (Current Branch).

The adatum.com domain contains the organizational units (OUs) shown in the following table.

OU name	Parent
OU1	Adatum.com
OU2	Adatum.com
OU11	OU1

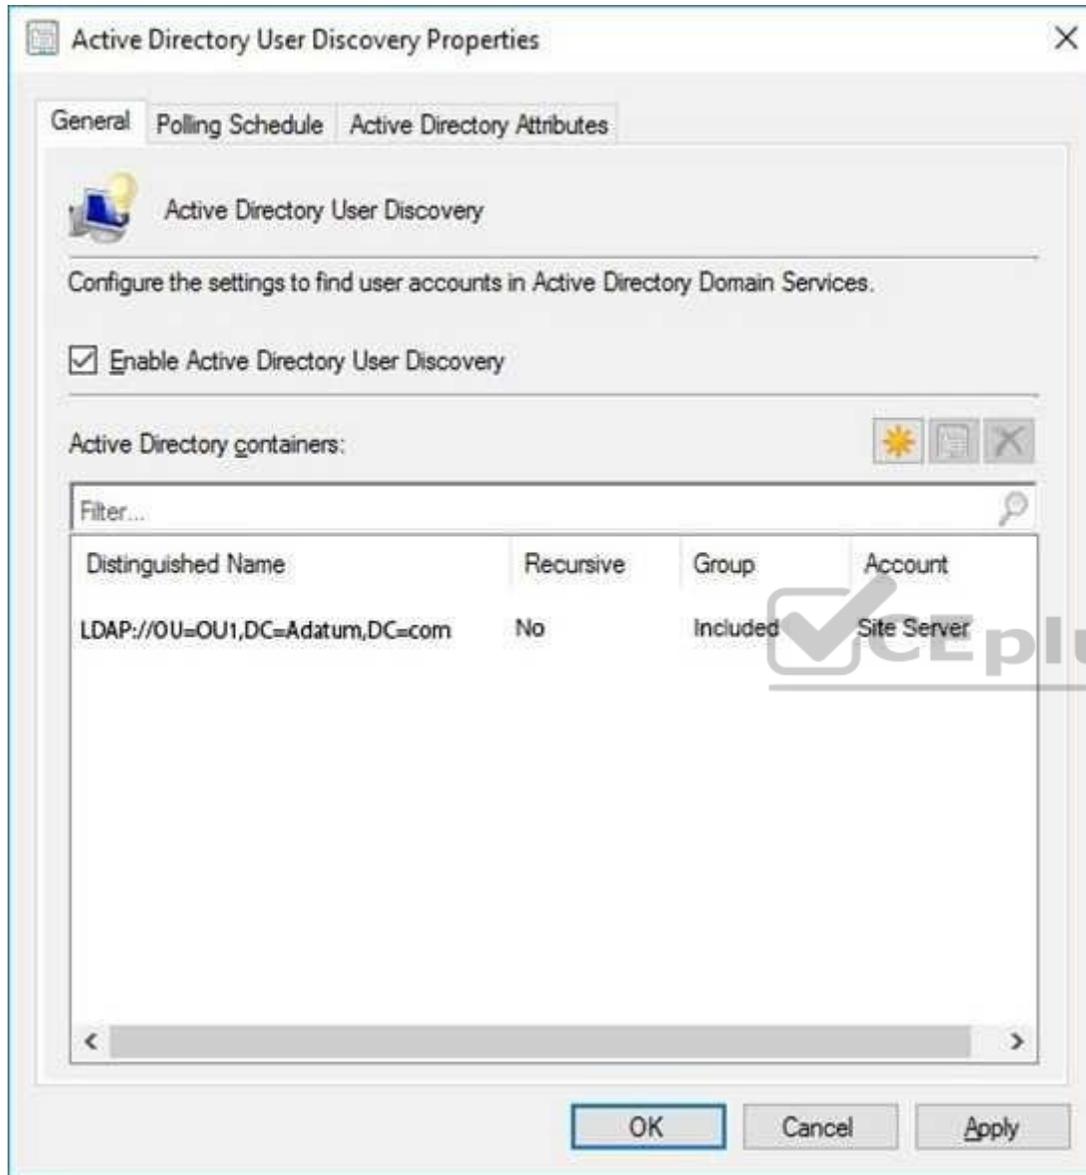

The adatum.com domain contains the groups shown in the following table.

Group name	OU
Group1	OU1
Group2	OU11

Active Directory User Discovery is configured as shown in the exhibit. (Click the **Exhibit** button.)

Exhibit:

You perform the following actions:

- Create a user named User1 in OU11.
- Create a user named User2 in OU2 in OU2 and add User2 to Group2. ▪
Create a user named User3 in OU2 and add User3 to Group1.

For each of the following statements, select Yes if the statement is true. Otherwise, select False.

NOTE: Each correct selection is worth one point.

QUESTION 37

You deploy the first System Center Configuration Manager primary site server to your organization.

You need to create the first user collection. The collection must contain members from an Active Directory security group and must update automatically.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Create a user collection that has membership based on a direct rule.
- B. Configure Active Directory Forest Discovery.
- C. Create a user collection that has membership based on a query rule.
- D. Configure Active Directory Group Discovery.
- E. Create a user collection that has membership based on an include collection rule.

Correct Answer: CD

Section: (none)

Explanation

Explanation/Reference:

QUESTION 39

HOTSPOT

Your network contains an Active Directory forest. The forest contains an enterprise certification authority (CA) named CA01. The CRL distribution point (CDP) is configured to use LDAP.

You have a System Center Configuration Manager server named CM01.

You configure on-premises mobile device management (MDM). You have a domain-joined computer that runs Windows 10. You successfully enroll the computer into MDM.

You need to ensure that you can enroll a non-domain-joined computer into MDM.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

On the client computer:

- Create an inbound firewall rule for CA01.
- Create an inbound firewall rule for CM01.
- Install an SSL certificate from a public CA.
- Install a trusted root certificate from CA01.

On CA01:

- Modify the CDP.
- Create a new certificate template.
- Install the Online Responder service.
- Modify the Authority Information Access (AIA) extension.

Hot Area:

Correct Answer:

Answer Area

On the client computer:

- Create an inbound firewall rule for CA01.
- Create an inbound firewall rule for CM01.
- Install an SSL certificate from a public CA.
- Install a trusted root certificate from CA01.

On CA01:

- Modify the CDP.
- Create a new certificate template.
- Install the Online Responder service.
- Modify the Authority Information Access (AIA) extension.

QUESTION 40

You have a deployment of System Center Configuration Manager (Current Branch).

Your company has a main office and a branch office. The branch office has five users. Some users use laptops and some use desktop computers.

All the servers for the company are located in the main office. The branch office connects to the main office by using a VPN over a DSL connection to the main office.

You need to minimize the bandwidth used to deploy updates to branch office clients over the VPN connection. The solution must minimize costs.

- A. a pull-distribution point
- B. a cloud management gateway
- C. BranchCache
- D. a cloud-based distribution point

Correct Answer: C
