70-703

Administering Microsoft System Center Configuration Manager and Cloud Services Integration (Beta)

Exam A

QUESTION 1

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a deployment of System Center Configuration Manager (Current Branch).

You deploy the first primary site server to your organization. Discovery is not configured.

You need to deploy the Configuration Manager client to five client computers in a workgroup.

Solution: You configure client push installations.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/core/clients/deploy/deploy-clients-to-windows-computers>

QUESTION 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a deployment of System Center Configuration Manager (Current Branch).

You deploy the first primary site server to your organization. Discovery is not configured.

You need to deploy the Configuration Manager client to five client computers in a workgroup.

Solution: You manually install the client on the computers.

Does this meet the goal?

<https://www.vceplus.com/>

- A. Yes
- B. No

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/core/clients/deploy/deploy-clients-to-windows-computers>

QUESTION 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a deployment of System Center Configuration Manager (Current Branch).

You deploy the first primary site server to your organization. Discovery is not configured.

You need to deploy the Configuration Manager client to five client computers in a workgroup.

Solution: You deploy the client by using a Group Policy software installation.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/core/clients/deploy/deploy-clients-to-windows-computers>

QUESTION 4

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has client computers that run either the 32-bit version of Windows 8 or the 64-bit version of Windows 10.

You need to install a line-of-business application to the computers. The 64-bit version of the application must be installed on the Windows 10 computers.

Solution: Create two applications that each has one deployment type. Configure a requirement for each deployment type.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

References: <https://blogs.technet.microsoft.com/canitpro/2013/06/02/step-by-step-managing-multiple-versions-of-the-same-application-via-system-centerconfiguration-manager/>

QUESTION 5

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has client computers that run either the 32-bit version of Windows 8 or the 64-bit version of Windows 10.

You need to install a line-of-business application to the computers. The 64-bit version of the application must be installed on the Windows 10 computers.

Solution: Create one application that has two deployment types. Configure a requirement for each deployment type.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

References: <https://blogs.technet.microsoft.com/canitpro/2013/06/02/step-by-step-managing-multiple-versions-of-the-same-application-via-system-centerconfiguration-manager/>

QUESTION 6

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a deployment of System Center Configuration Manager (Current Branch).

You configure hybrid mobile device management (MDM).

You have a support technician named User1.

Your company purchases 300 Apple iPhones.

You need to ensure that User1 can enroll the iPhones.

Solution: From Default Client Settings, you set an enrollment profile.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/mdm/deploy-use/enroll-devices-with-device-enrollment-manager>

QUESTION 7

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a deployment of System Center Configuration Manager (Current Branch).

You configure hybrid mobile device management (MDM).

You have a support technician named User1.

Your company purchases 300 Apple iPhones.

You need to ensure that User1 can enroll the iPhones.

Solution: From the Microsoft Intune Subscription Properties, you add User1 as a Device Enrollment Manager.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/mdm/deploy-use/enroll-devices-with-device-enrollment-manager>

QUESTION 8

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a deployment of System Center Configuration Manager (Current Branch).

You configure hybrid mobile device management (MDM).

You have a support technician named User1.

Your company purchases 300 Apple iPhones.

You need to ensure that User1 can enroll the iPhones.

Solution: From a web browser, you request an Enrollment Agent certificate from a certification authority (CA).

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/mdm/deploy-use/enroll-devices-with-device-enrollment-manager>

QUESTION 9

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a deployment of System Center Configuration Manager (Current Branch).

You configure hybrid mobile device management (MDM).

You have a support technician named User1.

Your company purchases 300 Apple iPhones.

You need to ensure that User1 can enroll the iPhones.

Solution: From the Configuration Manager console, you assign the Infrastructure Administrator security role to User1.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/mdm/deploy-use/enroll-devices-with-device-enrollment-manager>

QUESTION 10

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.

You work for a company named ADatum Corporation.

The ADatum network contains an Active Directory domain named adatum.com.

You have a partner company named Contoso, Ltd. The Contoso network contains an Active Directory domain named adatum.com.

All the client computers at both companies run Windows 10.

Each company has a deployment of System Center Configuration Manager (Current Branch).

ADatum has sales and IT departments. ADatum has a collection for each department.

Contoso has research, marketing, and human resources (HR) departments. Contoso has a collection for each department.

ADatum purchases Contoso.

You configure on-premises mobile device management (MDM) in adatum.com. You enroll the client computers in the IT department into on-premises MDM.

You configure hybrid MDM in contoso.com.

End of repeated scenario.

You need to enroll the computers of the managers into MDM.

What are two possible ways to achieve the goal? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Instruct the managers to run the `Add-Computer` cmdlet.
- B. Distribute a provisioning package to the managers. Instruct the managers to run the provisioning package.
- C. Instruct the managers to use the Settings app to connect to a work or school account.
- D. Instruct the managers to modify the network ID from the System settings.

Correct Answer: BC

Section: (none)

Explanation

Explanation/Reference:

References:

<https://docs.microsoft.com/en-us/windows/client-management/mdm/bulk-enrollment-using-windows-provisioning-tool> <https://docs.microsoft.com/en-us/sccm/mdm/deploy-use/user-enroll-devices-on-premises-mdm>

QUESTION 11

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.

You work for a company named ADatum Corporation.

The ADatum network contains an Active Directory domain named adatum.com.

You have a partner company named Contoso, Ltd. The Contoso network contains an Active Directory domain named adatum.com.

All the client computers at both companies run Windows 10.

Each company has a deployment of System Center Configuration Manager (Current Branch).

ADatum has sales and IT departments. ADatum has a collection for each department.

Contoso has research, marketing, and human resources (HR) departments. Contoso has a collection for each department.

ADatum purchases Contoso.

You configure on-premises mobile device management (MDM) in adatum.com. You enroll the client computers in the IT department into on-premises MDM.

You configure hybrid MDM in contoso.com.

End of repeated scenario.

You need to ensure that when the users at Contoso enroll into MDM, they accept the usage policy of Contoso.

What should you do?

<https://www.vceplus.com/>

- A. From Microsoft Intune in the Microsoft Azure portal, click **Device compliance** and configure the Compliance policy settings.
- B. From the Configuration Manager console, open the **Assets and Compliance** workspace and configure the terms and conditions.
- C. From Microsoft Intune in the Microsoft Azure portal, click **Device enrollment** and configure the terms and conditions.
- D. From the Configuration manager console, open the **Assets and Compliance** workspace and configure a compliance policy.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/mdm/deploy-use/terms-and-conditions>

QUESTION 12

You have a deployment of System Center Configuration Manager (Current Branch).

You configure hybrid mobile device management (MDM).

You need to enroll company-owned Android devices into MDM.

What should you do first?

- A. Install the Company Portal app on the Android devices.
- B. Create predeclared devices in Configuration Manager.
- C. Create computer objects in Active Directory for the Android devices.
- D. Purchase a Microsoft Office 365 subscription.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/mdm/deploy-use/predeclare-devices-with-hardware-id>

QUESTION 13

You have a deployment of System Center Configuration Manager (Current Branch).

You configure hybrid mobile device management (MDM).

Your company allows users to use their personal devices to access corporate data.

A user named User1 has a personal tablet that runs Windows 10. The tablet is enrolled in Microsoft Intune.

User1 leaves the company.

You plan to perform a selective wipe of the tablet.

What will be deleted from the tablet?

- A. all the apps that are installed from the Microsoft Store for Business
- B. all the files located in %ProgramData%\Package Cache
- C. all the user profiles
- D. all the files located in %USERPROFILE%\AppData\Roaming

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/mdm/deploy-use/wipe-lock-reset-devices>

QUESTION 14

You deploy System Center Configuration Manager (Current Branch).

You need to implement the co-management of Windows 10 devices.

Which two components should you deploy before you can configure co-management? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. a cloud management gateway
- B. the Microsoft Operations Management Suite (OMS) connector
- C. a Microsoft Intune subscription
- D. the Microsoft Store for Business

E. a Microsoft Office 365 subscription

Correct Answer: AC

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/core/clients/manage/co-management-prepare>

QUESTION 15

You have a deployment of System Center Configuration Manager (Current Branch). The Install Behavior for applications feature is enabled.

You have a line-of-business application named App1. Version 1.0 of App1 is deployed currently.

You need to upgrade App1 to version 2.0. Version 2.0 must be prevented from installing if App1.exe is running.

What should you do?

- A. Create a virtual application for version 2.0 of App1. Create a detection method for App1.exe.
- B. Create an application for version 2.0 of App1. Modify the Deployment Types and the Install Behavior settings.
- C. Modify the Deployment Types and the Install Behavior settings for version 1.0 of App1.
- D. Create a virtual application for version 1.0 of App1. Create a detection method for App1.exe.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/apps/deploy-use/deploy-applications#how-to-check-for-running-executable-files-before-installing-an-application>

QUESTION 16

You have a deployment of System Center Configuration Manager (Current Branch).

You currently deploy all Windows updates by using Configuration Manager.

You pilot the deployment of Click-to-Run for Office 365 and discover that clients are downloading updates for Office 365 from the Internet.

You need to manage the updates for Click-to-Run for Office 365.

What should you do?

- A. Create an automatic deployment rule (ADR) for software updates.
- B. From Default Client Settings, click **Software Updates** and set Enable installation of Express installation files on clients to **Yes**.
- C. Create a deployment package for software updates.
- D. From Default Client Settings, click **Software Updates** and set Enable management of the Office 365 Client Agent to **Yes**.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/core/servers/deploy/configure/deploy-and-manage-content>

QUESTION 17

You upgrade a System Center Configuration Manager (Current Branch) site by using Updates and Servicing. You do not upgrade the Configuration Manager client.

You need to pilot the upgrade of the Configuration Manager client on 10 percent of the computers.

What should you do?

- A. Create a collection that contains the pilot clients. From the Hierarchy Settings Properties, configure the Client Upgrade settings. Modify the setting for the production client.
- B. Create a collection that contains the pilot clients. From the Hierarchy Settings Properties, configure the Client Upgrade settings. Modify the setting for the preproduction client.
- C. In the Site Maintenance settings, modify the Clear Install Flag maintenance task. From the Hierarchy Settings Properties, configure the Client Upgrade settings. Modify the settings for the production client.
- D. Create an Active Directory security group that contains the pilot clients. In the Site Maintenance settings, modify the Update Application Available Targeting maintenance task.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/core/clients/manage/upgrade/test-client-upgrades>

QUESTION 18

You have a deployment of System Center Configuration Manager (Current Branch).

You need to create a list of client computers that lack the system resources required to upgrade Microsoft Office.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Enable Asset Intelligence hardware inventory reporting classes.
- B. Configure auditing for the resource attributes on files.
- C. Add an Asset Intelligence synchronization point.
- D. Add a service connection point.
- E. Enable Active Directory System Discovery.

Correct Answer: AC

Section: (none)

Explanation

Explanation/Reference:

References:

<https://docs.microsoft.com/en-us/sccm/core/clients/manage/asset-intelligence/introduction-to-asset-intelligence> <https://docs.microsoft.com/en-us/sccm/core/clients/manage/asset-intelligence/configuring-asset-intelligence>

QUESTION 19

You have a deployment of System Center Configuration Manager (Current Branch). All client computers run Windows 7 and have the most recent updates installed. Configuration Manager and Microsoft Operations Manager Suite (OMS) are integrated.

You plan to use Upgrade Readiness to identify which computers support Windows 10.

You need to ensure that the computers report data to OMS.

Which two actions should you perform? Each correct answer presents part of solution.

NOTE: Each correct selection is worth one point.

- A. From Client Settings, configure a commercial ID key.
- B. Configure Asset Intelligence.
- C. From Client Settings, configure Windows telemetry.
- D. Configure a software inventory.
- E. Configure a hardware inventory.

Correct Answer: AC

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/core/clients/manage/upgrade/upgrade-analytics> <https://docs.microsoft.com/en-us/sccm/core/clients/manage/monitor-windows-analytics>

QUESTION 20

Your network contains an Active Directory forest named adatum.com. All client computers run Windows 10.

You have a deployment of System Center Configuration Manager (Current Branch) that contains a primary site named S01. S01 contains the servers shown in the following table.

Server name	Site system role
Server1	Software update point
Server2	Distribution point
Server3	Service connection point

You plan to use Configuration Manager to deploy software updates.

You create a software update group named UpdateGroup1.

You need to ensure that you can deploy express installation files to the client computers.

What should you configure?

- A. the Software update point Properties of Server1

- B. the Distribution point Properties of Server2
- C. the Software Update Point Component Properties of S01
- D. the Service connection point Properties of Server3

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/sum/deploy-use/manage-express-installation-files-for-windows-10-updates>

QUESTION 21

You have a deployment of System Center Configuration Manager (Current Branch).

You use Configuration Manager to deploy Windows 10.

You discover that newly deployed images of Windows 10 are missing several Windows 10 updates.

When you attempt to deploy the updates by using the Schedule Updates Wizard, the process fails, and you receive the following error message: "Failed to apply one or more updates."

<https://www.vceplus.com/>

Which log file should you view to get additional information about the failure?

- A. ScanAgent.log
- B. UpdatesHandler.log
- C. OfflineServicingMgr.log
- D. UpdatesDeployment.log

E. WUAHandler.log

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

References: <https://technet.microsoft.com/en-us/library/hh427342.aspx>

QUESTION 22

You have a deployment of System Center Configuration Manager (Current Branch) that has a management point and a distribution point.

You have 1,000 Configuration Manager clients that run Windows 10.

You open the **Windows 10 Servicing** dashboard and discover that no data appears.

You need to ensure that servicing data is available on the dashboard.

What should you do?

- A. Configure a software inventory.
- B. Configure a hardware inventory.
- C. Add a reporting services point and configure the report options.
- D. Add a service connection point and a software update point.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/osd/deploy-use/manage-windows-as-a-service>

QUESTION 23

You have a deployment of System Center Configuration Manager (Current Branch).

You need to create a task sequence to deploy Windows 10.

Which two components should you include in the task sequence? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. a driver package
- B. an operating system image
- C. software updates
- D. a boot image

Correct Answer: BD

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/osd/deploy-use/create-a-task-sequence-to-install-an-operating-system>

QUESTION 24

You have a deployment of System Center Configuration Manager (Current Branch) that contains a primary site named S01. S01 has the Software update point site system role installed on a server named Server01 and the Distribution point site system role installed on a server named Server02.

You need to configure when Configuration Manager can install updates on the site system servers.

What should you configure?

- A. the Properties of the S01 site
- B. the Distribution point Properties of Server02
- C. the Software update point Properties of Server01
- D. the Software Update Point Component Properties of S01

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/sum/get-started/manage-settings-for-software-updates>

QUESTION 25

You deploy System Center Configuration Manager (Current Branch).

You need to manage the malware settings for Configuration Manager clients.

What should you do first?

- A. Add an Endpoint Protection point.
- B. Disable Windows Defender.
- C. Create a configuration baseline.
- D. Create a compliance policy.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/protect/deploy-use/endpoint-protection-configure>

QUESTION 26

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.

Your network contains an Active directory forest named adatum.com.

All client computers run Windows 10 Enterprise, Semi-Annual Channel (Targeted). All the computers are named by using the name of their respective department and an incremental three-digit number. For example, the first computer in the sales department is named Sales001.

Several managers use tablets that run Windows 10 and have 3 GB of RAM. All other client computers have at least 8 GB RAM.

Adatum.com is synchronized to Microsoft Azure Active Directory.

Your company implements the Microsoft Store for Business.

You have a deployment of System Center Configuration Manager (Current Branch) that has discovery configured. All the client computers have the Configuration Manager client installed.

The company uses the applications shown in the following table.

Application name	Description
App1	A Microsoft Application Virtualization (App-V) virtual application
App2	An app that the company purchased from the Microsoft Store for Business and is licensed for offline use
App3	A 64-bit application that is deployed to all the client computers
SalesAppLite	An application used by users in the sales department on computers that have 3 GB of RAM or less
SalesAppFull	An application used by the sales department users on computers that have more than 3 GB of RAM

The company identifies the following requirements for software deployments:

- View the Upgrade Readiness data of all the client computers.
- Deploy App1 to the client computers in the marketing department.
- Deploy App2 to the client computers in the human resources (HR) department.
- Monitor the usage of App3.
- Deploy SalesAppLite to sales department computers that have 3 GB of RAM or less.
- Deploy SalesAppFull to sales department computers that have more than 3 GB of RAM.

You create a cloud-based distribution point that has a public name of d1594d4527614a09b934d470.

End of repeated scenario.

You need to create the Upgrade Readiness report.

Which Group Policy object (GPO) setting should you configure?

- A. Diagnostics: Configure Scenario Execution Level
- B. Specify intranet Microsoft update service location
- C. Configure the Commercial ID
- D. Configure forwarder resource usage

E. Audit Other Account Logon Events

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

References: <https://www.anoopcnaair.com/methods-to-configure-telemetry-for-upgrade-readiness/>

QUESTION 27

You have a deployment of System Center Configuration Manager (Current Branch).

You configure reporting in Configuration Manager and verify that users can view reports.

You need to ensure that the users can subscribe to the reports and that the reports are delivered by using email.

What should you do?

- A. In Active Directory Users and Computers, configure the email address of the users.
- B. In Configuration Manager, configure the Report Options.
- C. In Reporting Services Configuration Manager, configure the E-mail Settings.
- D. In Microsoft SQL Server Management Studio, configure Database Mail.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

References: <https://github.com/MicrosoftDocs/SCCMdocs/blob/master/sccm/core/servers/manage/operations-and-maintenance-for-reporting.md>
[https://docs.microsoft.com/en-us/previous-versions/sql/sql-server-2008/ms159155\(v=sql.100\)](https://docs.microsoft.com/en-us/previous-versions/sql/sql-server-2008/ms159155(v=sql.100))

QUESTION 28

You have a deployment of System Center Configuration Manager (Current Branch).

Your company has two sites named Site01 and Site02.

Site02 has 200 client computers that run Windows 10 and a server named Server01 that runs Windows Server 2016.

You add the Distribution point site system role to Server01.

You need to ensure that only the client computers in Site02 can download content from Server01.

What should you configure?

- A. security scopes
- B. security roles
- C. boundary groups
- D. boundary group relationships

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

References: <https://github.com/MicrosoftDocs/SCCMdocs/blob/master/sccm/core/servers/deploy/configure/boundary-groups.md>

QUESTION 29

You have a deployment of System Center Configuration Manager (Current Branch) that contains a single primary site. A server named MP01 is the only management point in the site. A server named DP01 is the only distribution point in the site.

You need to ensure that you can deploy operating systems over the network to bare-metal computers.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Enable Wake On Lan in the firmware of the client computers.
- B. Integrate the Microsoft Deployment Toolkit (MDT) and Configuration Manager.
- C. Configure unknown computer support on DP01.
- D. Configure DP01 to accept PXE requests.
- E. Add the State migration point site system role to DP01.

Correct Answer: CD

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/osd/deploy-use/install-new-windows-version-new-computer-bare-metal> <https://docs.microsoft.com/en-us/sccm/osd/deploy-use/use-pxe-to-deploy-windows-over-the-network> <https://docs.microsoft.com/en-us/sccm/osd/get-started/prepare-for-unknown-computer-deployments>

QUESTION 30

You have a deployment of System Center Configuration Manager (Current Branch).

Your company opens a new office. All the client computers in the new office use IPv6 addresses only. The IPv6 address of one of the computers is 2001:3823:2c50:6a39:e976:b0eb:93f7:fb41.

You need to configure an IPv6 boundary in Configuration Manager for the new office.

What should you use to configure the boundary?

- A. 2001:3823:2c50:6a39
- B. ::93f7:fb41
- C. 2001:3823::
- D. e976:b0eb:93f7:fb41

Correct Answer: A

Section: (none)

QUESTION 31

You deploy System Center Configuration Manager (Current Branch) to manage desktop computers.

On the reporting services point, you discover that the following reports are missing:

- Application Deployment – Historical
- List of Malware Detected – Historical
- General Software Inventory – Historical
- General Hardware Inventory – Historical

- Infrastructure Health Overview – Historical
- Software Distribution Summary – Historical
- Endpoint Protection and Software Update Compliance – Historical

You need to ensure that you can generate reports for long-term historical data.

What should you do first?

- A. Create report subscriptions.
- B. Install Microsoft SQL Server Report Builder.
- C. Modify the properties of the reporting services point.
- D. Add a Data Warehouse service point.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/core/servers/manage/data-warehouse>

QUESTION 32

You have a deployment of System Center Configuration Manager (Current Branch).

Your company has a main office and a branch office. The branch office has five users. Some users use laptops and some users use desktop computers.

All the servers for the company are located in the main office. The branch office connects to the main office by using a site-to-site VPN.

You need to minimize the bandwidth used to deploy updates to branch office clients over the VPN connection. The solution must minimize costs.

What should you configure in the branch office?

- A. a distribution point
- B. a software update point
- C. a secondary site server
- D. a cloud-based distribution point

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/core/plan-design/hierarchy/design-a-hierarchy-of-sites>

QUESTION 33

You configure a task sequence in System Center Configuration Manager.

You need to ensure that the support department can see the progress of the task sequence only.

What should you do?

- A. Assign the db_datareader role to the users in the support department.
- B. Create a monitoring query based on a task sequence.
- C. Create a status message query.
- D. Create a monitoring query that is limited to a collection.

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

References: <http://www.sccconfigmgr.com/2014/02/27/monitor-osd-with-status-message-queries-in-configmgr-2012/>

QUESTION 34

You have a deployment of System Center Configuration Manager (Current Branch) that contains the servers shown in the following table.

Server name	Site system role
Server1	Management point
Server2	Distribution point
Server3	Enrollment point
Server4	Software update point

You need to configure the environment to ensure that operating systems can be deployed by using operating system deployment.

On which server should you enable PXE support?

- A. Server1
- B. Server2
- C. Server3
- D. Server4

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 35

You have a deployment of System Center Configuration Manager (Current Branch).

You need to ensure that the CIO of your company automatically receives the Antimalware overall status and history report by email every week.

What should you do first?

- A. Configure the SMTP Settings in Microsoft SQL Server Reporting Services (SSRS).
- B. Create a subscription in Configuration Manager.
- C. Configure the execution account for Microsoft SQL Server Reporting Services (SSRS).
- D. Configure the Subscription Schedule in Configuration Manager.
- E. Configure a client settings policy.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

References: <https://github.com/MicrosoftDocs/SCCMdocs/blob/master/sccm/core/servers/manage/operations-and-maintenance-for-reporting.md>

QUESTION 36

You have a device collection named Collection1.

Currently, you use an automated deployment rule (ADR) to deploy updates as quickly as possible to Collection1.

You need to ensure that the updates are installed during a predefined period of time. The solution must affect the updates only.

What should you do?

- A. From the Membership Rules tab of Collection1, schedule an incremental update of the collection.
- B. From the Maintenance Windows tab of Collection1, create a new schedule that applies to all deployments.
- C. From the Membership Rules tab of Collection1, schedule a full update of the collection.
- D. From the Maintenance Windows tab of Collection1, create a new schedule that applies to software updates only.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

**QUESTION 37**

You deploy the first System Center Configuration Manager primary site server to your organization.

You need to create the first user collection. The collection must contain members from an Active Directory security group and must update automatically.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Create a user collection that has membership based on a direct rule.
- B. Configure Active Directory Forest Discovery.
- C. Create a user collection that has membership based on a query rule.
- D. Configure Active Directory Group Discovery.
- E. Create a user collection that has membership based on an include collection rule.

Correct Answer: CD

Section: (none)

Explanation

Explanation/Reference:

<https://docs.microsoft.com/en-us/sccm/core/servers/deploy/configure/configure-discovery-methods> <https://technet.microsoft.com/en-us/library/gg712295.aspx>

QUESTION 38

You have a deployment of System Center Configuration Manager (Current Branch) that you use to manage devices on the corporate network.

You need to ensure that you can deploy software to Configuration Manager clients on the Internet.

What should you deploy?

- A. a management point on a perimeter network and a cloud management gateway in Microsoft Azure
- B. a cloud management gateway and the Microsoft Azure Service for Cloud Management in Microsoft Azure
- C. a cloud-based distribution point in Microsoft Azure and a Microsoft Intune subscription
- D. a cloud-based distribution point and a cloud management gateway in Microsoft Azure

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/core/clients/manage/cmgy/plan-cloud-management-gateway>

QUESTION 39

You have a deployment of System Center Configuration Manager (Current Branch).

Your company has a main office and a branch office. The branch office has five users. Some users use laptops and some use desktop computers.

All the servers for the company are located in the main office. The branch office connects to the main office by using a VPN over a DSL connection to the main office.

You need to minimize the bandwidth used to deploy updates to branch office clients over the VPN connection. The solution must minimize costs.

- A. a pull-distribution point
- B. a cloud management gateway
- C. BranchCache
- D. a cloud-based distribution point
- E. a software update point

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/core/plan-design/hierarchy/design-a-hierarchy-of-sites>

QUESTION 40

You have a deployment of System Center Configuration Manager (Current Branch) that you use to manage devices on the corporate network.

You need to ensure that you can deploy software to Configuration Manager clients on the Internet.

What should you deploy?

- A. a cloud-based distribution point in Microsoft Azure and the Microsoft Operations Management Suite (OMS) connector
- B. a management point and a service connection point in a perimeter network.
- C. a cloud-based distribution point and a cloud management gateway in Microsoft Azure
- D. a cloud-based distribution point in Microsoft Azure and a Microsoft Intune subscription

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/core/clients/manage/cmng/plan-cloud-management-gateway>

QUESTION 41

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a deployment of System Center Configuration Manager (Current Branch).

You configure hybrid mobile device management (MDM).

You enroll several Apple iOS devices and deploy compliance policies.

One of the devices is marked as noncompliant.

You need to retrieve the logs from the device.

Solution: You install the Apple Configurator tool on a Mac computer. You connect the device to the computer. From All Devices, you double-click the device to review and save the log file.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 50

You have a deployment of System Center Configuration Manager (Current Branch).

You need to ensure that help desk users can use the Configuration Manager console to remotely control Configuration Manager clients.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Add the help desk users to the local Administrators group on each client computer.
- B. Enable Remote Desktop on the client computers.
- C. Configure a client settings policy.
- D. Allow connections to TCP port 3389 on the client computers.
- E. Allow connections to TCP port 2701 on the client computers.

Correct Answer: CD

Section: (none)

Explanation

Explanation/Reference:

QUESTION 51

You have a deployment of System Center Configuration Manager (Current Branch) that contains a single primary server named CM01. CM01 is configured as a distribution point.

The main office of your company has multiple floors. Each floor has a VLAN and a subnet.

A DHCP server named DC01 currently hosts all the DHCP scopes.

You need to ensure that you can use Configuration Manager to deploy operating systems to the client computers on each floor by using the PXE.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Configure option 60 for each DHCP scope.
- B. Use the Configuration Manager console to distribute the boot image to CM01.
- C. Add the IP address of CM01 to the IP Helper of each VLAN.
- D. Copy the RemoteInstall folder to CM01.

Correct Answer: CD

Section: (none)

Explanation

Explanation/Reference:

QUESTION 53

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.

Your network contains an Active directory forest named adatum.com.

All client computers run Windows 10 Enterprise, Semi-Annual Channel (Targeted). All the computers are named by using the name of their respective department and an incremental three-digit number. For example, the first computer in the sales department is named Sales001.

Several managers use tablets that run Windows 10 and have 3 GB of RAM. All other client computers have at least 8 GB RAM.

Adatum.com is synchronized to Microsoft Azure Active Directory.

Your company implements the Microsoft Store for Business.

You have a deployment of System Center Configuration Manager (Current Branch) that has discovery configured. All the client computers have the Configuration Manager client installed.

The company uses the applications shown in the following table.

Application name	Description
App1	A Microsoft Application Virtualization (App-V) virtual application
App2	An app that the company purchased from the Microsoft Store for Business and is licensed for offline use
App3	A 64-bit application that is deployed to all the client computers
SalesAppLite	An application used by users in the sales department on computers that have 3 GB of RAM or less
SalesAppFull	An application used by the sales department users on computers that have more than 3 GB of RAM

The company identifies the following requirements for software deployments:

- View the Upgrade Readiness data of all the client computers.
- Deploy App1 to the client computers in the marketing department.
- Deploy App2 to the client computer in the human resources (HR) department.
- Monitor the usage of App3.
- Deploy SalesAppLite to sales department computers that have 3 GB of RAM or less.
- Deploy SalesAppFull to sales department computers that have more than 3 GB of RAM.

You create a cloud-based distribution point that has a public name of d1594d4527614a09b934d470.

End of repeated scenario.

You need to meet the requirements for the sales department computers.

What are two possible ways to achieve the goal? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Create two packages that each has one program. Configure each program to use a requirement to run on a specific client platform.
- B. Create one package that has two programs. Configure each program to use a requirement to run on a specific client platform.
- C. Create two applications that each has one deployment type. Configure each deployment type to use a device requirement.
- D. Create one application that has two deployment types. Configure each deployment type to use a device requirement.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 54

You have a deployment of System Center Configuration Manager (Current Branch).

5,000 computers have the Configuration Manager client installed.

You need to deploy an online-licensed app named App1 from the Microsoft Store for Business to all Configuration Manager clients.

What should you do first?

- A. From the Configuration Manager console, launch the Microsoft Azure Services Wizard and select **Microsoft Store for Business**.
- B. From the Microsoft Store for Business portal, create a new AutoPilot deployment profile.
- C. From the Microsoft Store for Business portal, invite a line-of-business (LOB) publisher to your organization.
- D. From the Configuration Manager console, create a new collection.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/core/servers/deploy/configure/Azure-services-wizard>

QUESTION 55

You have a deployment of System Center Configuration Manager (Current Branch).

Hardware inventory is enabled for all Configuration Manager clients.

You create a device collection named Collection1.

You need to include Trusted Platform Module (TPM) information in the hardware inventory of the devices in Collection1.

What should you configure in Configuration Manager?

- A. a configuration baseline
- B. the Client Device Settings
- C. hardware requirements
- D. a compliance policy

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 56

You have a deployment of System Center Configuration Manager (Current Branch).

You use the deployment to manage client computers that run Windows 7.

You need to deploy a Microsoft Application Virtualization (App-V) package to the computers by using Configuration Manager.

What should you do first?

- A. Configure the Enable App-V Client setting by using a Group Policy object (GPO).
- B. Deploy the App-V client to the computers.
- C. Install the App-V Sequencer on a reference computer.
- D. From the Configuration Manager console, create an App-V virtual environment.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/apps/get-started/deploying-app-v-virtual-applications>

QUESTION 57

You have a collection of devices that run an application named SaleApp1.

Every week, the sales manager publishes an updated price list to a file share. To use the new price list, the list must be copied to the application folder on the devices.

You need to ensure that SalesApp1 receives a new price list weekly.

What should you configure?

- A. a weekly maintenance window for the target collection
- B. a weekly schedule for the Update Application Available Targeting maintenance task
- C. a weekly content validation schedule on the distribution point
- D. a package that has a weekly recurrence schedule

Correct Answer: D

Section: (none)

QUESTION 58

You have a deployment of System Center Configuration Manager (Current Branch).

You need to deploy an application to the users in the sales department. The deployment must meet the following requirements:

- Install the application on client computers that have at least 5 GB of RAM.
- Validate that the deployment of the application was successful.

Which settings should you configure for the deployment?

- A. Detection Method and Requirements
- B. Requirements and Dependencies
- C. Install Behavior and Dependencies
- D. Dependencies and User Experience
- E. User Experience and Detection Method

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

References: <https://blogs.msdn.microsoft.com/scstr/2012/05/31/how-to-create-an-application-in-configuration-manager-2012/> **QUESTION 59**

You have a deployment of System Center Configuration Manager (Current Branch).

You plan to implement hybrid mobile device management (MDM).

Which cloud service should you provision?

- A. Microsoft Operations Manager Suite (OMS)
- B. Microsoft Store for Business
- C. Microsoft Intune
- D. Microsoft Azure

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/mdm/deploy-use/setup-hybrid-mdm>

QUESTION 60

You have a deployment of System Center Configuration Manager (Current Branch).

You configure hybrid mobile device management (MDM).

You have a bring-your-own-device (BYOD) policy. Users self-enroll their mobile phones.

You plan to deploy a line-of-business app named App01 to Apple iOS devices. App01 can access private company data.

You need to ensure that a PIN is entered when the users open App1.

What should you configure?

- A. an application management policy
- B. a compliance policy
- C. a configuration baseline
- D. Client Settings

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

QUESTION 61

You have a deployment of System Center Configuration Manager (Current Branch).

You configure hybrid mobile device management (MDM).

You run WINVER on client computer named Computer1 as shown in the following exhibit.

About Windows

Windows 10

Microsoft Windows

Version 1709 (OS Build 16299.15)

© 2017 Microsoft Corporation. All rights reserved.

The Windows 10 Enterprise operating system and its user interface are protected by trademark and other pending or existing intellectual property rights in the United States and other countries/regions.

This product is licensed under the [Microsoft Software License Terms](#) to:

Student

OK

You need to create a compliance policy that has a condition specifying a minimum version of the operating system. The condition must use the same operating system version as Computer1.

Which version should you specify in the condition?

A. 10.0.16299.15

- B. 10.0.1709
- C. 10.1709
- D. 10.1709.16299.15

Correct Answer: A

Section: (none)

QUESTION 62

You have a deployment of System Center Configuration Manager (Current Branch).

You add the cloud management gateway connector point to the deployment.

Which site system role can be configured to receive the traffic from the cloud management gateway?

- A. Service connection point
- B. Distribution point
- C. Management point

<https://www.vceplus.com/>

- D. Endpoint Protection point

Correct Answer: C

Section: (none)

Explanation

Explanation/Reference:

References: <https://www.systemcenterdudes.com/how-to-setup-an-sccm-cloud-management-gateway/> **QUESTION 63**

You have a deployment of System Center Configuration Manager (Current Branch).

The domain contains the users shown in the following table.

User name	Members of
User1	Domain Users
User2	Help Desk Users
User3	Enterprise Admins
User4	Support Techs

Support Techs is a member of the Administrators group on each client computer. Help Desk Users is a member of the Power Users group on each client computer.

You need to deploy Configuration Manager agents by using a client push installation. The solution must use the principle of least privilege.

Which user should you configure as the client push installation account?

- A. User1
- B. User2
- C. User3
- D. User4

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 64

Your company has a main office and a branch office. The branch office connects to the main office by using a VPN over DSL connection.

The branch office contains 500 client computers that run Windows 8.1. All the computers are on the same subnet.

You plan to upgrade the operating system on the computers by using Configuration Manager. During the upgrade process, you will maintain the user state and the files.

You need to recommend a solution to reduce the amount of WAN traffic during the operating system deployments.

What should you include in the recommendation?

- A. a cloud management gateway
- B. a distribution point
- C. a service connection point
- D. a cloud-based distribution point

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 65

Your company has a main office and a branch office.

You have a deployment of System Center Configuration Manager (Current Branch).

The main office has a software update point. Currently, all client computers receive Microsoft updates from the main office.

You need to ensure that the computers in the branch office receive updates from a local server. The solution must meet the following requirements:

- Ensure that the updates are managed by using Configuration Manager.
- Ensure that the computers in the branch office scan for updates against a local catalog.

What should you deploy to the branch office?

- A. a software update point, a service connection point, and an Application Catalog website point
- B. a software update point, a distribution point, and a reporting services point
- C. Windows Server Update Services (WSUS), a service connection point, and a management point
- D. Windows Server Update Services (WSUS), a software update point, and a distribution point

Correct Answer: D

Section: (none)

QUESTION 66

You have a deployment of System Center Configuration Manager (Current Branch).

All the users at your company access their email by using Microsoft Exchange Online.

You need to prevent the users from connecting to their email from a jailbroken or rooted device.

Which two items should you deploy? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. a conditional access policy
- B. a compliance policy
- C. custom Client Device Settings
- D. an email profile

Correct Answer: AB

Section: (none)

Explanation

References: <https://docs.microsoft.com/en-us/sccm/mdm/deploy-use/manage-access-to-services>

QUESTION 67

You have a deployment of System Center Configuration Manager (Current Branch).

You add the cloud management gateway connector point to the deployment.

Which site system role can be configured to receive the traffic from the cloud management gateway?

- A. Service connection point
- B. Software update point
- C. Asset Intelligence synchronization point
- D. Endpoint Protection point

Correct Answer: B

Section: (none)

Explanation

QUESTION 68

You use System Center Configuration Manager (Current Branch) to manage client computers that run Windows 7. You have a Microsoft Application Virtualization (App-V) package named App1.

You need to deploy App1 to the computers by using Configuration Manager and ensure that the App1 runs.

What should you do first?

- A. Install the App-V Sequencer on a reference computer.
- B. From the Configuration Manager console, create an App-V virtual environment.
- C. Deploy the App-V client to the computers.
- D. Configure the **Enable App-V Client** setting by using a Group Policy object (GPO).

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference: References: <https://docs.microsoft.com/en-us/windows/application-management/app-v/appv-enable-the-app-v-desktop-client>

QUESTION 69

You have a deployment of System Center Configuration Manager (Current Branch) that was implemented by a user named Admin1.

Configuration Manager includes the administrative users shown in the following table:

User name	Security role	Security scope
User1	Infrastructure Administrator	Default, Scope1
User2	Asset Manager	Scope1
User3	Full Administrator	Default
User4	Operating System Deployment Manager	Scope1
User5	Operating System Deployment Manager	Default
User6	Operations Administrator	Scope1
User7	Operations Administrator	Default
User8	Company Resource Access Manager	Default, Scope1

You add a boot image named Boot1 to Configuration Manager. You set the security scope of Boot1 to **Scope1**.

Which user can create a task sequence that uses Boot1?

- A. User8
- B. User3
- C. User6
- D. User1

Correct Answer: B

Section: (none)

QUESTION 70

You have a deployment of System Center Configuration Manager (Current Branch).

You add the cloud management gateway connector point to the deployment.

Which site system role can be configured to receive the traffic from the cloud management gateway?

- A. Service connection point
- B. Software update point
- C. Asset Intelligence synchronization point
- D. Distribution point

Correct Answer: B

Section: (none)

Explanation

QUESTION 71

You deploy System Center Configuration Manager (Current Branch).

You need to manage the antimalware settings for Configuration Manager clients.

What should you do first?

- A. Add an Endpoint Protection point.
- B. Disable Windows Defender.
- C. Create a configuration baseline.
- D. Create a compliance policy.

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:

References: <https://docs.microsoft.com/en-us/sccm/protect/deploy-use/scenarios-endpoint-protection>

QUESTION 72

Your network contains an Active Directory domain. The domain contains client computers that are managed by using System Center Configuration Manager (Current Branch). The computers are configured as shown in the following table.

Number of computers	Operating system
1,000	Windows 10 Enterprise
10	Windows 10 Pro

You need to ensure that you can run a virtual application on all the computers. What should you do?

- A. Deploy a provisioning package that upgrades all the computers that run Windows 10 Pro to Windows 10 Enterprise.
- B. Deploy a certificate profile.
- C. Enable hardware virtualization support for all the computers.
- D. From Application Management, create Microsoft Application Virtualization (App-V) virtual environment.

Correct Answer: D

Section: (none)

Explanation

Explanation/Reference:

QUESTION 73

You have a deployment of System Center Configuration Manager (Current Branch).

You need to enable on-premises mobile device management (MDM) for the deployment.

Which three site system roles should you install? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Cloud management gateway connection point
- B. Enrollment proxy point
- C. Service connection point
- D. Enrollment point
- E. Certificate registration point

Correct Answer: BCD

Section: (none)

Explanation

QUESTION 74

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You use Endpoint Protection in System Center Configuration Manager.

You need to review the list of all client computers that have the latest antivirus definitions installed.

Solution: You use the Windows Server Update Services (WSUS) console.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

Section: (none)

Explanation

QUESTION 77

You have a deployment of System Center Configuration Manager (Current Branch).
Microsoft Office 365 ProPlus is deployed to all client computers.

You need to ensure that all updates for Office 365 are deployed from Configuration Manager by using the least amount of administrative effort.

Which three actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Create an automatic deployment rule (ADR)
- B. Add a product to the software update point
- C. Create a configuration baseline
- D. Create an application
- E. Update the Client Settings
- F. Create a task sequence

Correct Answer: ABE

Section: (none)

Explanation

Explanation/Reference: References: <https://docs.microsoft.com/en-us/sccm/sum/deploy-use/automatically-deploy-software-updates>

QUESTION 78

You have a deployment of System Center Configuration Manager (Current Branch).

You add the cloud management gateway connector point to the deployment.

Which site system role can be configured to receive the traffic from the cloud management gateway?

- A. Service connection point
- B. Endpoint Protection point
- C. Asset Intelligence synchronization point
- D. Management point

Correct Answer: D

Section: (none)

QUESTION 79

You have a deployment of System Center Configuration Manager (Current Branch).

You configure the environment for co-management.

You need to install the Configuration Manager client on all computers that are enrolled in Microsoft Intune.

Which three actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Distribute the Configuration Manager client installation files to the cloud-based distribution point.
- B. From Intune, deploy an app that contains Ccmsetup.msi.
- C. From Configuration Manager, deploy a cloud-based distribution point.
- D. From Configuration Manager, enable site-wide client push installation.
- E. From Intune, deploy an app that contains Client.msi.

Correct Answer: ABC

Section: (none)

Explanation

Explanation/Reference:

QUESTION 80

You have a deployment of System Center Configuration Manager (Current Branch).

You have offices in Montreal and Seattle. Each office is configured as an Active Directory site. Objects in each office are part of a device collection.

You need to deploy software to clients in the Montreal office from servers in the Montreal office only.

What should you do?

- A. Configure a boundary group for the client assignment.

- B. Create a boundary for the Montreal office that uses Active Directory sites.
- C. Add a management point in the Montreal office.
- D. Create a user collection that contains the users in the Montreal office.

Correct Answer: B

Section: (none)

Explanation

Explanation/Reference:

QUESTION 81

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You plan to deploy System Center Configuration Manager (Current Branch) by using an initial pilot deployment.

The pilot deployment will contain five computers that run Windows 10.

You need to deploy the Configuration Manager client to the five computers only.

Solution: From each client, you run **ccmsetup.exe**.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: A

Section: (none)

Explanation

Explanation/Reference:
