Installation, Storage, and Compute with Windows Server 2016

Exam A

QUESTION 1

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory forest.

You install Windows Server 2016 on 10 virtual machines.

You need to deploy the Web Server (IIS) server role identically to the virtual machines.

Solution: From a Group Policy object (GPO), you create an application control policy, and then you apply the policy to the virtual machines.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

Explanation:

QUESTION 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory forest.

You install Windows Server 2016 on 10 virtual machines.

You need to deploy the Web Server (IIS) server role identically to the virtual machines.

Solution: You create a software installation package, and then you publish the package to the virtual machines by using a Group Policy object (GPO).

https://www.vceplus.com/ Does

this meet the goal?

A. Yes

B. No

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

Explanation:

CEplus

QUESTION 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a server named Server1 that runs Windows Server 2016.

Server1 hosts a line-of-business application named App1. App1 has a memory leak that occasionally causes the application to consume an excessive amount of memory.

You need to log an event in the Application event log whenever App1 consumes more than 4 GB of memory.

Solution: You create a performance counter data collector.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

Explanation:

QUESTION 4

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a server named Server1 that runs Windows Server 2016.

Server1 hosts a line-of-business application named App1. App1 has a memory leak that occasionally causes the application to consume an excessive amount of memory.

You need to log an event in the Application event log whenever App1 consumes more than 4 GB of memory.

Solution: You create a performance counter alert data collector.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A Section: (none) Explanation

Explanation/Reference:

Explanation:

QUESTION 5

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a server named Server1 that runs Windows Server 2016.

Server1 hosts a line-of-business application named App1. App1 has a memory leak that occasionally causes the application to consume an excessive amount of memory.

You need to log an event in the Application event log whenever App1 consumes more than 4 GB of memory.

Solution: You create a system configuration information data collector.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

Explanation:

QUESTION 6

You have a Hyper-V host named Server1 that runs Windows Server 2016.

Server1 has a virtual machine named VM1. VM1 is configured to run the Docker daemon.

On VM1, you have a container network that uses transparent mode.

You need to ensure that containers that run on VM1 can obtain IP addresses from DHCP.

What should you do?

- A. On VM1, run Get-VMNetworkAdapter-VMName VM1 | Set-VMNetworkAdapter –MacAddressSpoofing On.
- B. On VM1, run docker network connect.
- C. On Server1, run docker network connect.
- D. On Server1, run Get-VMNetworkAdapter –VMName VM1 | Set-VMNetworkAdapter –MacAddressSpoofing On.

Correct Answer: D Section: (none) Explanation

Explanation/Reference:

Explanation:

To use DHCP for IP assignment on a virtual container host enable MACAddressSpoofing

If the container host is virtualized, and you wish to use DHCP for IP assignment, you must enable MACAddressSpoofing on the virtual machine's network adapter. Otherwise, the Hyper-V host will block network traffic from the containers in the VM with multiple MAC addresses.

CEplus

You can enable MACAddressSpoofing with this PowerShell command:

PS C:\> Get-VMNetworkAdapter -VMName ContainerHostVM | Set-VMNetworkAdapter -MacAddressSpoofing On

References: https://docs.microsoft.com/en-us/virtualization/windowscontainers/container-networking/advanced

QUESTION 7

You have a server that runs Windows Server 2016.

The server contains a storage pool named Pool1. Pool1 contains five physical disks named Disk1, Disk2, Disk3, Disk4, and Disk5.

A virtual disk named VirtualDisk1 is stored in Pool1. VirtualDisk1 uses the parity storage layout.

Disk3 fails.

You need to remove Disk3 from Pool1.

Which two commands should you run? Each correct answer presents part of the solution.

- A. Update-StoragePool –FriendlyName Pool1
- B. Set-ResiliencySetting -StoragePool Pool1 -PhysicalDiskRedundancyDefault 4
- C. Reset-PhysicalDisk -FriendlyName Disk3
- D. Set-PhysicalDisk -FriendlyName Disk3 -Usage Retired
- E. Remove-PhysicalDisk –FriendlyName Disk3

Correct Answer: DE Section: (none) Explanation

Explanation/Reference:

Explanation:

QUESTION 8

You have an Active Directory domain named Contoso.com. The domain contains servers named Server1, Server2 and Server3 that run Windows Server 2016. https://www.vceplus.com/

Server1 and Server 2 are nodes in a Hyper-V cluster named Cluster1. You add a Hyper-V Replica Broker role named Broker1 to Cluster1.

Server3 is Hyper-V server. A virtual machine VM1 runs on Server3.

Live Migration is enabled on all three servers and it is configured to use Kerberos authentication only.

You need to ensure that you can perform the migration of VM1 to Server2.

What should you do?

- A. Modify the **Storage Migration** settings on Server3.
- B. Modify the **Cluster** permissions for Cluster1.
- C. Add the Server3 computer account to the **Replicator** group on Server1 and Server2.
- D. Modify the **Delegation** settings of the Server3 computer account.

Correct Answer: D Section: (none) Explanation

Explanation/Reference:

Explanation:

If you have decided to use Kerberos to authenticate live migration traffic, configure constrained delegation. This involves modifying the Delegation settings of the source server, which is Server3 in this instance.

References: https://technet.microsoft.com/en-us/library/jj134199(v=ws.11).aspx#BKMK Step1

QUESTION 9

You have a Windows Server 2016 Hyper-V failover cluster that contains two nodes named Node1 and Node2.

On Node1, you create a virtual machine named VM01 by using Hyper-V Manager.

You need to configure VM01 to move to Node2 automatically if Node1 becomes unavailable.

What should you do?

- A. From Failover Cluster Manager, run Configure Role actions.
- B. From Hyper-V Manager, click VM01, and click Enable Replication.
- C. From Hyper-V Manager, click Node1, and then modify the Hyper-V settings.

https://www.vceplus.com/

D. From Windows PowerShell, run the Enable-VMReplicationcmdlet.

Correct Answer: A Section: (none) Explanation

Explanation/Reference:

Explanation:

If you have VMs on cluster nodes that are not currently cluster resources, it's a simple process to make them highly available, provided they're using cluster storage (such as a Cluster Shared Volume):

- 1. Start Failover Cluster Manager.
- 2. Expand the cluster Roles.
- 3. Select the Configure Role... action.
- 4. Click Next to the introduction wizard.
- 5. In the Select Role dialog box, select Virtual Machine as the type and click Next.
- 6. Select all the virtual machines you want to make highly available and click Next.
- 7. Click Next to the confirmation.
- 8. Click Finish to the report, which should show Success for all. If there are Warnings, check and resolve problems if needed

QUESTION 10

Your network contains three Hyper-V hosts. You add all of the hosts to a cluster.

You need to create highly available storage spaces that connect to directly attached storage on the hosts.

Which cmdlet should you use?

- A. Add-ClusterDisk
- ${\sf B.} \ \ \textbf{Enable-ClusterStorageSpacesDirect}$
- C. Update-ClusterVirtualMachineConfiguration
- D. Set-StoragePool

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

Explanation:

QUESTION 11

You have four servers named Server1, Server2, Server3, and Server4 that run Windows Server 2016. Each server has a single 4-TB SATA hard disk.

To each server you attach a new 4-TB SATA hard disk.

You need to create a new storage cluster that uses Storage Spaces Direct. The storage pool must contain all of the new disks.

Which command should you run before you enable Storage Space Direct?

- A. Add-ClusterSharedVolume -Name "Disk 1" -Cluster Cluster1
- B. New-Cluster -Name Cluster1 -Node 'Server1', 'Server2', 'Server3', 'Server4' -NoStorage
- C. Get-ClusterAvailableDisk -Cluster Cluster1 | Add-ClusterDisk
- D. New-ClusterStorageEnclosure -id 1 -name Cluster1 -type jbod -ConnectionString "Server1,Server2,Server3,Server4"

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

Explanation:

QUESTION 12

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Your network contains an Active Directory domain named contoso.com. The functional level of the forest and the domain is Windows Server 2008 R2. All servers in the domain run Windows Server 2016 Standard. The domain contains 300 client computers that run either Windows 8.1 or Windows 10.

The domain contains nine servers that are configured as shown in the following table.

Name Configuration Server1 Domain controller		Planned changes	
		None	
Server2 File server		Run Failover Clustering and Storage Spaces Direct	
Server3 File server		Run Failover Clustering and Storage Spaces Direct	
Server4	Hyper-V host	Run shielded virtual machines	
Server5	Hyper-V host	None	
Server6 Member server		Run Active Directory Federation Service (AD FS)	
VM1	Virtual machine hosted on Server5	None	
VM2	Virtual machine hosted on Server5	5 None	
VM3	Virtual machine hosted on Server5	None	

The virtual machines are configured as follows:

- All of the servers on the network can communicate with all of the virtual machines.

On Server4, you plan to provision a new volume that will be used to create large, fixed-size VHDX files.

Which type of file system should you use for the new volume to minimize the amount of time required to create the VHDX files?

- A. ReFS
- B. NTFS
- C. CSVFS
- D. exFAT

Correct Answer: A Section: (none) Explanation

Explanation/Reference:

Explanation:

QUESTION 13

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Your network contains an Active Directory domain named contoso.com. The functional level of the forest and the domain is Windows Server 2008 R2. All servers in the domain run Windows Server 2016 Standard. The domain contains 300 client computers that run either Windows 8.1 or Windows 10.

The domain contains nine servers that are configured as shown in the following table.

Name Configuration Server1 Domain controller		Planned changes	
		None	
Server2 File server		Run Failover Clustering and Storage Spaces Direct	
Server3 File server		Run Failover Clustering and Storage Spaces Direct	
Server4	Hyper-V host	Run shielded virtual machines	
Server5	Hyper-V host	None	
Server6	Member server	Run Active Directory Federation Services (AD FS)	
VM1	Virtual machine hosted on Server5	None	
VM2	Virtual machine hosted on Server5	None	
VM3	Virtual machine hosted on Server5	None	

The virtual machines are configured as follows:

- Each virtual machine has one virtual network adapter.
- VM1 and VM2 are part of a Network Load Balancing (NLB) cluster.
- All of the servers on the network can communicate with all of the virtual machines.

You need to minimize the likelihood that a virtual machine running malicious code will consume excessive resources on Server5.

What should you do?

- A. Configure the virtual machines as shielded virtual machines.
- B. Run the **Set-VMProcessor** cmdlet and specify the **EnableHostResourceProtection** parameter.
- C. Run the **Set-VMProcessor** cmdlet and specify the **MaximumCountPerNumaNode** parameter.
- D. Configure VM Network Adapter Isolation.

Correct Answer: B Section: (none) Explanation

Explanation:

QUESTION 14

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.

You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 has a dynamically expanding virtual hard disk (VHD) file that is 900 GB. The VHD contains 400 GB of free space.

You need to reduce the amount of disk space used by the VHD.

What should you run?

- A. the **Mount-VHD** cmdlet
- B. the **Diskpart** command
- C. the Set-VHD cmdlet
- D. the **Set-VM** cmdlet
- E. the **Set-VMHost** cmdlet
- F. the **Set-VMProcessor** cmdlet
- G. the Install-WindowsFeature cmdlet
- H. the **Optimize-VHD** cmdlet

Correct Answer: H Section: (none) Explanation

Explanation/Reference:

Explanation:

QUESTION 15

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.

You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 contains a virtual machine named VM1.

You need to ensure that you can use nested virtualization on VM1.

What should you run on Server1?

- A. the Mount-VHD cmdlet
- B. the **Diskpart** command
- C. the Set-VHD cmdlet
- D. the Set-VM cmdlet
- E. the Set-VMHost cmdlet
- F. the **Set-VMProcessor** cmdlet
- G. the Install-WindowsFeature cmdlet
- H. the **Optimize-VHD** cmdlet

Correct Answer: F Section: (none) Explanation

Explanation/Reference:

Explanation:

QUESTION 16

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.

You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 has a virtual machine named VM1 that uses a single VHDX file. VM1 is configured as shown in the following table.

Configuration	Details	
Virtual machine generation	V2	
Operating system	Windows 8	
File system	NTFS	
Number of partitions	1	
Disk type	Basic	
Unallocated disk space	100 GB	

You plan to use VM1 as a virtual Machine Template to deploy shielded virtual machines.

You need to ensure that VM1 can be used to deploy shielded virtual machines.

https://www.vceplus.com/ What

should you run?

- A. the Mount-VHD cmdlet
- B. the **Diskpart** command
- C. the Set-VHD cmdlet
- D. the **Set-VM** cmdlet
- E. the **Set-VMHost** cmdlet
- F. the Set-VMProcessor cmdlet
- G. the Install-WindowsFeature cmdlet
- H. the **Optimize-VHD** cmdlet

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

Explanation:

The VHDX requires two partitions.

QUESTION 17

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

A company named Contoso, Ltd. has several servers that run Windows Server 2016. Contoso has a Hyper-V environment that uses failover clustering and Windows Server Update Services (WSUS). The environment contains several Windows containers and several virtual machines.

The WSUS deployment contains one upstream server that is located on the company's perimeter network and several downstream servers located on the internal network. A firewall separates the upstream server from the downstream servers.

You plan to deploy a human resources application to a new server named HRServer5. HRServer5 contains a FAT32-formatted data volume.

The CIO of Contoso identifies the following requirements for the company's IT department:

- Deploy a failover cluster to two new virtual machines.
- Store all application databases by using Encrypted File System (EFS).
- Ensure that each Windows container has a dedicated IP address assigned by a DHCP server.
- Produce a report that lists the processor time used by all of the processes on a server named Server1 for five hours.
- Encrypt all communication between the internal network and the perimeter network, including all WSUS communications.
- Automatically load balance the virtual machines hosted in the Hyper-V cluster when processor utilization exceeds 70 percent.

You need to modify the Hyper-V cluster to meet the load balancing requirement for the virtual machine.

Which command should you run?

- A. (Get-ClusterParameter).AutoBalancerMode=2
- B. (Get-Cluster).AutoBalancerMode=2
- C. (Get-ClusterParameter).AutoBalancerLevel=2
- D. (Get-Cluster).AutoBalancerLevel=2

Correct Answer: D Section: (none) Explanation

Explanation/Reference:

Explanation:

QUESTION 18

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

A company named Contoso, Ltd. has several servers that run Windows Server 2016. Contoso has a Hyper-V environment that uses failover clustering and Windows Server Update Services (WSUS). The environment contains several Windows containers and several virtual machines.

The WSUS deployment contains one upstream server that is located on the company's perimeter network and several downstream servers located on the internal network. A firewall separates the upstream server from the downstream servers.

____.com

You plan to deploy a human resources application to a new server named HRServer5. HRServer5 contains a FAT32-formatted data volume.

The CIO of Contoso identifies the following requirements for the company's IT department:

- Deploy a failover cluster to two new virtual machines.
- Store all application databases by using Encrypted File System (EFS).
- Ensure that each Windows container has a dedicated IP address assigned by a DHCP server.
- Produce a report that lists the processor time used by all of the processes on a server named Server1 for five hours.
- Encrypt all communication between the internal network and the perimeter network, including all WSUS communications.
- Automatically load balance the virtual machines hosted in the Hyper-V cluster when processor utilization exceeds 70 percent.

What should you do to prepare the data volume on HRServer5 to store the databases required for the human resources application?

- A. Format the data volume by using ReFS.
- B. Enable Trusted Platform Module (TPM) on HRServer5.
- C. Format the data volume by using NTFS.
- D. Enable BitLocker Drive Encryption (BitLocker) on the data volume.

Correct Answer: C Section: (none) Explanation

QUESTION 31

You have a Nano Server named Nano1. Which cmdlet should you use to identify whether the DNS Server role is installed on Nano1?

- A. Find-NanoServerPackage
- B. Get-Package
- C. Find-Package
- D. Get-WindowsOptionalFeature

Correct Answer: D Section: (none) Explanation

Explanation/Reference:

Explanation:

QUESTION 32

Note: In this section, you'll see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem.

Once you answer a question in this section, you will NOT be able to return to it. As a result these questions will not appear in the review screen.

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

Your network contains an Active Directory forest named contoso.com. The forest contains a member server named Server1 that runs Windows Server 2016. All domain controllers run Windows Server 2012 R2. Contoso com has the following configuration:

```
PS C:\> (Get-ADForest). ForestMode Windows2008R2Forest PS C:\> (Get-ADDomain). DomainMode Windows2008R2Domain PS C:\>
```

You plan to deploy an Active Directory Federation Services (AD FS) farm on Server1 and to configure device registration. You need to configure Active Directory to support the planned deployment.

Solution: You raise the domain functional level to Windows Server 2012 R2.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

Explanation:

QUESTION 33

You are configuring a Windows Server 2016 failover cluster in a workgroup. Before installing one of the nodes, you run the ipconfig /all command and receive the following output:

Windows IP Configuration

Host Name.....: Serverl
Primary DNS Suffix....:
Node Type....: Hybrid
IP Routing Enabled...: No
WINS Proxy Enabled...: No
DNS Suffix Search List...:

Ethernet adapter Ethernet:

You need to ensure that Server1 can be added as a node in the cluster. What should you do?

- A. Assign a static IP address
- B. Change the $\bf Node\ Type$ to $\bf Broadcast$
- C. Configure a DNS suffix
- D. Enable NetBIOS over TCP/IP

Correct Answer: C Section: (none) Explanation

Explanation/Reference:

Explanation:

QUESTION 34

Note: In this section, you'll see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem.

Once you answer a question in this section, you will NOT be able to return to it. As a result these questions will not appear in the review screen.

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

Your network contains an Active Directory forest named contoso.com. The forest contains a member server named Server1 that runs Windows Server 2016. All domain controllers run Windows Server 2012 R2. Contoso com has the following configuration:

```
PS C:\> (Get-ADForest). ForestMode Windows2008R2Forest PS C:\> (Get-ADDomain). DomainMode Windows2008R2Domain PS C:\>
```

You plan to deploy an Active Directory Federation Services (AD FS) farm on Server1 and to configure device registration. You need to configure Active Directory to support the planned deployment.

Solution: You raise the forest functional level to Windows Server 2012 R2.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

Explanation:

New installations of AD FS 2016 require the Active Directory 2016 schema (minimum version 85)

QUESTION 35

You have a server named Served that runs Windows Server 2016. Server1 will be used as a VPN server. You need to configure Server1 to support VPN Reconnect. Which VPN protocol should you use?

A. PPTP

B. L2TP

C. SSTP

D. IKEv2

Correct Answer: D Section: (none) Explanation

Explanation/Reference:

Explanation:

QUESTION 36

You have a server named Server1 that runs Windows Server 2016. You install the Docker daemon on Server1. You need to configure the Docker daemon to accept connections only on TCP port 64500.

What should you do?

- A. Run the New-NetFirewallRule cmdlet
- B. Run the Set-ServiceWindows PowerShell cmdlet
- C. Edit the daemon.json file
- D. Edit the configuration json file
- E. Modify the routing table on Server1
- F. Run the sc control command

Correct Answer: C Section: (none) Explanation

Explanation/Reference:

Explanation:

The preferred method for configuring the Docker Engine on Windows is using a configuration file. The configuration file can be found at 'C:\ProgramData\Docker \config\daemon.json'. If this file does not already exist, it can be created.

Note: The Docker Engine can also be configured by modifying the Docker service using the sc config command.

 $References: \\ \underline{https://docs.microsoft.com/en-us/virtualization/windowscontainers/manage-docker/configure-docker-daemon \\$

QUESTION 37

Note: This question is part of a series of questions that use the same similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.

You have two servers named Server1 and Server2 that run Windows Server 2016. Server1 and Server2 have the Hyper-V server role installed. An iSCSI SAN connects to the network.

You create a LUN on the SAN and configure both servers to connect to the iSCSI target. You create a failover cluster and add Server1 and Server2 to the cluster.

You connect both servers to the iSCSI target and format the shared storage. You need to add the shared storage to the cluster. The solution must ensure that virtual machines running on both nodes can access the shared storage simultaneously.

Which tool should you use?

- A the clussyc-exe command
- B. the cluster.exe command
- C. the Computer Management snap-in
- D. the configurehyperv.exe command
- E. the Disk Management snap-in
- F. the Failover Cluster Manager snap-in
- G. the Hyper-V Manager snap-in
- H. the Server Manager app

Correct Answer: F Section: (none) Explanation

Explanation:

QUESTION 38

You have an Active Directory domain named Contoso.com. The domain contains servers named Server1 and Server2 that run Windows Server 2016. You install the Remote Access server role on Server1. You install the Network Policy and Access Services server role on Server2. You need to configure Server1 to use Server2 as a RADIUS server. What should you do?

- A. From **Routing and Remote Access**, configure the authentication provider.
- B. From the Connection Manager Administration Kit, create a Connection Manager profile.
- C. From **Server Manager**, create an **Access Policy**.
- D. From Active Directory Users and Computers, modify the Delegation settings of the Server1 computer account.

Explanation:

QUESTION 40

Note: In this section, you'll see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem.

Once you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

Your network contains an Active Directory domain named contoso.com. The domain contains a DNS server named Server1. All client computers run Windows 10. On Server1, you have the following zone configuration:

ZoneName	ZoneType	IsAutoCreated	IsDsIntegrated	IsReverseLookupZone	IsSign
msdcs.contoso.com	Primary	False	True	False	False
adatum.com	Forwarder	False	False	False	
contoso.com	Primary	False	True	False	False
fabrikam.com	Primary	False	False	False	True
TrustAnchors	Primary	False	True	False	False

You have the following subnets defined on Server1.

Name	IPv4Subnet	IPv6Subnet
Subnet1	(10.0.0.0/24)	
Subnet2	(10.0.1.0/24)	
Subnet3	(192.168.15.0/24)	
Subnet4	(172.16.1.0/24)	

You need to prevent Server1 from resolving queries from DNS clients located on Subnet4. Server1 must resolve queries from all other DNS clients. Solution: From Windows PowerShell on Server1, you run the **Export-DnsServerDnsSecPublicKey** cmdlet.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

QUESTION 41

Note: This question is part of a series of questions that use the same similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.

You have a two-node Hyper-V cluster named Cluster1.

As virtual machine named VM1 runs on Cluster1. You need to configure monitoring of VM1.

The solution must move VM1 to a different node if the Print Spooler service on VM1 stops unexpectedly.

https://www.vceplus.com/

Which tool should you use?

- A. the clussvc.exe command
- B. the cluster.exe command
- C. the Computer Management console
- D. the configurehyperv.exe command
- E. the Disk Management console
- F. the Failover Cluster Manager console
- G. the Hyper-V Manager console
- H. the Server Manager app

Correct Answer: F Section: (none) Explanation

Explanation/Reference:

Explanation:

QUESTION 42

You have a failover cluster named Cluster1. A virtual machine named VM1 is a highly available virtual machine that runs on Cluster1. A custom application named App1 runs on VM1. You need to configure monitoring of VM1. If App1 adds an error entry to the Application event log, VM1 should be automatically rebooted and moved to another cluster node. Which tool should you use?

- A. Hyper-V Manager
- B. Failover Cluster Manager
- C. Server Manager
- D. Resource Monitor

QUESTION 53

Note: In this section, you'll see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem.

Once you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

Your network contains an Active Directory domain named contoso.com. The domain contains a DNS server named Server1. All client computers run Windows 10. On Server1, you have the following zone configuration:

ZoneName	ZoneType	IsAutoCreated	IsDsIntegrated	IsReverseLookupZone	IsSign
					50755
msdcs.contoso.com	Primary	False	True	False	False
adatum.com	Forwarder	False	False	False	
contoso.com	Primary	False	True	False	False
fabrikam.com	Primary	False	False	False	True
TrustAnchors	Primary	False	True	False	False

You have the following subnets defined on Server1.

Name	IPv4Subnet	IPv6Subnet
75 75 75 75 75 75 75 75 75 75 75 75 75 7		
Subnet1	(10.0.0.0/24)	
Subnet2	(10.0.1.0/24)	
Subnet3	(192.168.15.0/24)	
Subnet4	(172.16.1.0/24)	

You need to prevent Server1 from resolving queries from DNS clients located on Subnet4. Server1 must resolve queries from all other DNS clients.

Solution: From the Security setting of each zone on Server1, you modify the permissions.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

Explanation:

QUESTION 54

You have a server named Server1 that runs Windows Server 2016. The Docker daemon runs on Server1.

You need to ensure that members of a security group named Docker Administrators can administer Docker.

What should you do?

A. Run the **Set-Service** cmdlet.

- B. Modify the Security settings of **Dockerd.exe**.
- C. Edit the Configuration.json file.
- D. Run the sc config command.
- E. Run the sc privs command.
- F. Add Docker Administrators to the local Administrators group

Correct Answer: D Section: (none) **Explanation**

Explanation/Reference:

Explanation:

The preferred method for configuring the Docker Engine on Windows is using a configuration file. The configuration file can be found at 'C:\ProgramData\Docker \config\daemon.ison'. If this file does not already exist, it can be created.

The Docker Engine can also be configured by modifying the Docker service using the sc config command.

QUESTION 62

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a server named Server1 that runs Windows Server 2016.

Server1 hosts a line-of-business application named App1. App1 has a memory leak that occasionally causes the application to consume an excessive amount of memory.

You need to log an event in the Application event log whenever App1 consumes more than 4 GB of memory.

Solution: You create an event trace data collector.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

QUESTION 63

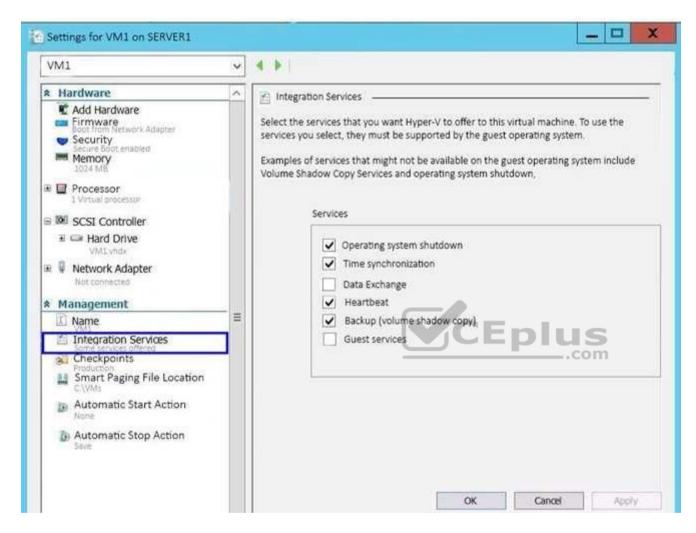

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Hyper-V host named Server1 that hosts a virtual machine named VM1. Server1 and VM1 run Windows Server 2016.

The settings for VM1 are configured as shown in the exhibit. (Click the Exhibit button.)

You need to ensure that you can use the Copy-VMFile cmdlet on Server1 to copy files from VM1.

Solution: You start the Hyper-V Guest Service Interface service on VM1.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: A Section: (none) Explanation

QUESTION 68

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Your network contains an Active Directory domain named contoso.com. The functional level of the forest and the domain is Windows Server 2008 R2. All servers in the domain run Windows Server 2016 Standard. The domain contains 300 client computers that run either Windows 8.1 or Windows 10.

The domain contains nine servers that are configured as shown in the following table.

Name	Configuration	Planned changes
Server1	Domain controller	None
Server2	File server	Run Failover Clustering and Storage Spaces Direct
Server3 File server		Run Failover Clustering and Storage Spaces Direct
Server4	Hyper-V host	Run shielded virtual machines
Server5	Hyper-V host	None
Server6	Member server	Run Active Directory Federation Services (AD FS)
VM1	Virtual machine hosted on Server5	None
VM2	Virtual machine hosted on Server5	None
VM3	Virtual machine hosted on Server5	None

The virtual machines are configured as follows:

- Each virtual machine has one virtual network adapter.
- VM1 and VM2 are part of a Network Load Balancing (NLB) cluster.
- All of the servers on the network can communicate with all of the virtual machines.

You plan to implement nested virtual machines on VM1.

Which two features will you be prevented from using for VM1?

- A. NUMA spanning
- B. live migration
- C. Dynamic Memory
- D. Smart Paging

Correct Answer: BC Section: (none) Explanation

Explanation/Reference:

Explanation: References:

https://blogs.technet.microsoft.com/virtualization/2015/10/13/windows-insider-preview-nested-virtualization/

QUESTION 69

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Your network contains an Active Directory domain named contoso.com. The functional level of the forest and the domain is Windows Server 2008 R2. All servers in the domain run Windows Server 2016 Standard. The domain contains 300 client computers that run either Windows 8.1 or Windows 10.

The domain contains nine servers that are configured as shown in the following table.

Name	Configuration	Planned changes
Server1	Domain controller	None
Server2	File server	Run Failover Clustering and Storage Spaces Direct
Server3 File server		Run Failover Clustering and Storage Spaces Direct
Server4	Hyper-V host	Run shielded virtual machines
Server5	Hyper-V host	None
Server6	Member server	Run Active Directory Federation Services (AD FS)
VM1	Virtual machine hosted on Server5	None
VM2	Virtual machine hosted on Server5	None
VM3	Virtual machine hosted on Server5	None

The virtual machines are configured as follows:

• All of the servers on the network can communicate with all of the virtual machines.

You create a new NLB cluster that contains VM3.

You need to ensure that VM2 can remain in the original cluster and be added to the new cluster.

What should you do first?

- A. Add a new virtual network adapter to VM2.
- B. Install the Web Application Proxy server role on VM2 and VM3.
- C. Modify the default port rule.
- D. Change the cluster operation mode.

Correct Answer: A Section: (none) Explanation

QUESTION 71

You have a server named Server1 that runs Windows Server 2016. The Docker daemon runs on Server1.

You need to ensure that members of a security group named Docker Administrators can administer Docker.

What should you do?

- A. Run the **sc privsc** ommand.
- B. Edit the Daemon.json file.
- C. Add **Docker Administrators** to the local Administrators group.
- D. Edit the Configuration.json file.
- E. Modify the Security settings of **Docker.exe**.
- F. Run the **Set-Service** cmdlet.

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

Explanation:

The preferred method for configuring the Docker Engine on Windows is using a configuration file. The configuration file can be found at 'C:\ProgramData\Docker \config\daemon.json'. If this file does not already exist, it can be created.

Note: The Docker Engine can also be configured by modifying the Docker service using the sc config command.

QUESTION 73

You have a Hyper-V host that runs Windows Server 2016.

You need to identify the amount of processor resources consumed by Hyper-V and virtual machines.

Which counter should you use from Performance Monitor?

- A. \Hyper-V Hypervisor\Logical Processor
- B. \Hyper-V Hypervisor Root Virtual Processor(_Total)\% Guest Run Time
- C. \Hyper-V Hypervisor Virtual Processor(_Total)\% Hypervisor Run Time
- D. \Hyper-V Hypervisor Virtual Processor(_Total)\% Total Run Time

E. \Hyper-V Hypervisor Logical Processor(_Total)\% Total Run Time

Correct Answer: E Section: (none) Explanation

Explanation/Reference:

QUESTION 74

You have a server named Server1 that runs Windows Server 2016.

The disks on Server1 are configured as shown in the following table.

Volume	Туре	File System	Capacity
C:	Attached locally	NTFS	150 GB
D:	Attached locally	exFAT	100 GB
E:	Attached locally	NTFS	20 GB
F:	Attached locally	ReFS	1 TB
G:	ISCSI LUN	NTFS	2 TB

Windows Server 2016 is installed in C:\Windows.

On which two volumes can you enable data deduplication? Each correct answer presents a complete solution.

A. C:

B. D:

C. E:D. F:

E. G:

Correct Answer: CE Section: (none) Explanation

<u>2016/</u>

QUESTION 77

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.

You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 has a virtual machine that uses a virtual hard disk (VHD) named disk1.vhdx.

You receive the following warning message from Event Viewer: "One or more virtual hard disks have a physical sector size that is smaller than the physical sector size of the storage on which the virtual hard disk file is located." You need to resolve the problem that causes the warning message.

What should you run?

- A. the Mount-VHD cmdlet
- B. the **Diskpart** command
- C. the Set-VHD cmdlet
- D. the Set-VM cmdlet
- E. the Set-VMHost cmdlet
- F. the **Set-VMProcessor** cmdlet
- G. the Install-WindowsFeature cmdlet
- H. the Optimize-VHD cmdlet

QUESTION 78

You deploy two servers that run Windows Server 2016.

You install the Failover Clustering feature on both servers.

You need to create a workgroup cluster.

What should you do?

- A. Configure both of the server to be in a workgroup named Workgroup. Configure the Cluster Service to log on as Network Service. Run the **New-Cluster** cmdlet and specify an administrative access point of **None**.
- B. Create matching local administrative accounts on both of the servers. Assign the same primary DNS suffix to both of the servers. Run the **New-Cluster** cmdlet and specify an administrative access point of **DNS**.
- C. Configure both of the server to be in a workgroup named Workgroup. Configure the Cluster Service to log on as Network Service. Run the **New-Cluster** cmdlet and specify an administrative access point of **DNS**.
- D. Create matching local administrative accounts on both of the servers. Assign the same primary DNS suffix to both of the servers. Run the **New-Cluster** cmdlet and specify an administrative access point of **None**

Correct Answer: B Section: (none) Explanation

QUESTION 79

You have two Hyper-V hosts named Server1 and Server2 that run Windows Server 2016. The hosts are nodes in failover cluster.

You have a virtual machine named VM1. VM1 connects to a virtual switch named vSwitch1.

You discover that VM1 automatically live migrates when vSwitch temporarily disconnects.

You need to prevent VM1 from being live migrated when vSwitch1 temporarily disconnects.

What should you do?

- A. Run the Set-VMNetworkAdapter cmdlet and set StormLimit to 0.
- B. From the network adapter setting of VM1, disable the Heartbeat integration service.

https://www.vceplus.com/

- C. Run the **Set-VMNetworkAdapter** cmdlet and set IsManagementOS to **False**.
- D. From the network adapter setting of VM1, disable the Protected network setting.

Correct Answer: D Section: (none) Explanation

QUESTION 82

Your network contains an Active Directory domain named contoso.com. The domain contains two servers named Server1 and Server2 that run Windows Server 2016.

Each server has an operating system disk and four data disks. All of the disks are locally attached SATA disks. Each disk is a basic disk, is initialized as an MBR disk, and has a single NTFS volume.

You plan to implement Storage Spaces Direct by using the data disks on Server1 and Server2.

You need to prepare the data disks for the Storage Spaces Direct implementation.

What should you do?

- A. Format the volumes on the data disks as exFAT.
- B. Initialize the data disks as GPT disks and create an ReFS volume on each disk.
- C. Convert the data disks to dynamic disks.
- D. Delete the volumes from the data disks.

Correct Answer: D

Section: (none) Explanation

Explanation:

QUESTION 83

Your network contains a new Active Directory domain named contoso.com.

You have a security policy that states that new servers should run Nano Server whenever possible.

Which server role can be deployed on a Nano Server?

- A. Active Directory Certificate Services
- B. **DHCP Server**
- C. Remote Desktop Services
- D. **DNSServer**

Correct Answer: D Section: (none) Explanation

Explanation/Reference:

Explanation:

QUESTION 84

You have an Active Directory domain named contoso.com.

The computers in contoso.com are installed by using Windows Deployment Services.

You have a server named Server1 that runs Windows Server 2016 and is a member of contoso.com. Server1 has the Hyper-V role installed. Virtual machines on Server1 are connected to an external switch named Switch1.

You create a virtual machine named VM1 on Server1 by running the following cmdlets.

New-VM VM1
Add-VMHardDiskDrive -VMName VM1 -ControllerType IDE -Path c:\VMs\Disk1.vhd
Add-VMNetworkAdapter -VMName VM1

You need to ensure that you can install the operating system on VM1 by using Windows Deployment Services.

What should you do?

https://www.vceplus.com/

- A. Modify the **DefaultFlowMinimumBandwidthWeight** parameter of Switch1.
- B. Add a SCSI controller to VM1.
- C. Add a legacy network adapter to VM1.
- D. Modify the **SwitchType** parameter of Switch1.

Correct Answer: C Section: (none) Explanation

QUESTION 85

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory forest.

You install Windows Server 2016 on 10 virtual machines.

You need to deploy the Web Server (IIS) server role identically to the virtual machines.

Solution: From Windows System Image Manager, you create an answer file, you copy the file to C:\Sysprep on each virtual machine, and then you run the ApplyImage cmdlet.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

QUESTION 86

You have a server named Server1 that runs Windows Server 2016. Server1 has the Containers feature installed. You create a text file that contains the commands that will be used to automate the creation of new containers. You need to ensure that the commands in the text file are used when you create new containers. What should you name the file?

- A. Bootstrap.ini
- B. Config.ini
- C. Dockerfile
- D. Unattend.txt

Correct Answer: C Section: (none) Explanation

Explanation/Reference:

https://www.digitalocean.com/community/tutorials/docker-explained-using-dockerfiles-to-automate-building-of-images

QUESTION 87

You have Hyper-V virtual machines that run 50 web servers, 10 Microsoft SQL Server servers, 10 files servers, and eight domain controllers.

You need to implement a backup strategy that meets the following requirements:

- Backs up all servers
- Centralizes backup management
- Performs application-level backups

Provides the ability to perform bare metal recovery What

should you use?

- A. Microsoft Azure VM Backup
- B. Microsoft Azure Backup Agent
- C. Windows Server Backup
- D. Microsoft Azure Backup Server

Correct Answer: D Section: (none) Explanation

Explanation/Reference:

QUESTION 88

You create a Storage Spaces Direct hyper-converged failover cluster. The cluster contains three nodes and a 1-TB Storage Spaces Direct volume.

The cluster will store virtual machines.

You plan to extend the volume by adding an additional 3 TB.

What is the minimum amount of extra disk capacity required to accommodate extending the volume?

- A. 3TB on the coordinator node
- B. 3 TB per node
- C. 4 TB per node
- D. 4 TB on the coordinator node

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

https://docs.microsoft.com/en-us/windows-server/storage/storage-spaces/drive-symmetry-considerations

QUESTION 89

You have a Hyper-V failover cluster that contains three nodes. Virtual machines are distributed evenly across the cluster nodes. https://www.vceplus.com/

You need to ensure that if a node loses connectivity from the other nodes, the virtual machines on the node will be transitioned to one of the remaining nodes after one minute.

Which settings should you modify?

- A. Quarantene Duration and Quarantine Threshold
- B. SameSubnetDelay and CrossSubnetDelay
- C. QuorumArbitrationTimeMax and RequestReplyTimeout
- D. ResiliencyPeriod and ResiliencyLevel

Correct Answer: D Section: (none) **Explanation**

QUESTION 90

QUESTION 90
You have a server named Server1 that runs Windows Server 2016. Server1 is a Hyper-V host that hosts a virtual machine named VM1.

Server1 has three network adapter cards that are connected to virtual switches named vSwitch1, vSwitch2 and vSwitch3.

You configure NIC Teaming on VM1 as shown in the exhibit.

You need to ensure that VM1 will retain access to the network if a physical adapter card fails on Server1. What should you do?

- A. From Hyper-V Manager on Server1, modify the settings of VM1.
- B. From Windows PowerShell on Server1, run the **Set-VmSwitch** cmdlet.

- C. From the properties of the NIC team on VM1, add the adapter named Ethernet to the NIC team.
- D. From the properties of the NIC team on VM1, change the load balancing of the NIC team.

Correct Answer: A Section: (none) **Explanation**

Explanation/Reference:

QUESTION 91

You have a Nano Server that runs Windows Server 2016. The Nano Server runs on a physical machine.

You have not installed any packages on the server.

You attach a new disk to the server, and you initialize the disk as a GPT disk.

You need to create a ReFS-formatted volume on the new disk.

What should you do first?

- CEplus A. From the physical server, log on to the Nano Server Recovery Console.
- B. Install the Microsoft NanoServer-Host-Package package.
- C. Run the **Format-Volume** cmdlet and specify the **-FileSystem** switch.
- D. Install the Microsoft NanoServer-Storage-Package package.

Correct Answer: D Section: (none) **Explanation**

Explanation/Reference:

QUESTION 92

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After your answer a question in this section, you will NOT be able to return to it.

As a result, these questions will not appear in the review screen.

You have a server named Server1 that runs Windows Server 2016.

You plan to use Windows Server Backup to back up all of the data on Server1.

You create a new volume on Server1.

You need to ensure that the new volume can be used as a backup target.

The backup target must support incremental backups.

Solution: You mount the volume to C:\Backup, and you format the volume by using NTFS.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A Section: (none) Explanation

Explanation/Reference:

QUESTION 93

You create a Nano server image named Nano1.vhdx by using the New-NanoServerImage cmdlet.

You attach Nano1.vhdx to a Generation 1 virtual machine named Nano1.

When you start Nano1, you get the following error message:

"Boot failure. Reboot and select proper Boot device or Insert Boot Media in selected Boot device"

You need to successfully start Nano server.

What should you do?

- A. Attach Nano1.vhdx to a SCSIcontroller.
- B. Recreate Nano1 as a Generation 2 virtual machine.
- C. Increase the memory of Nano1 to 512 Mb.
- D. Modify the BIOS settings of Nano1.

Correct Answer: B

Section: (none) Explanation

Explanation/Reference:

Explanation:

A Generation 1 VM cannot boot from a vhdx disk; only a Generation 2 VM can boot from a vhdx disk.

QUESTION 94

You have two servers named Server1 and Server2 that run Windows Server 2016.

You plan to implement Storage Replica to replicate the contents of volumes on Server1 to Server2.

You need to ensure that the replication traffic between the servers is limited to a maximum of 100 Mbps.

Which cmdlet should you run?

- A. Set-NetUDPSetting
- B. New-StorageQosPolicy
- C. Set-
 - **SmbBandwidthLimit**
- D. Set-NetTCPSetting
- E. New-
 - ${\bf Net Transport Filter}$
- F. Set-NetworkController
- G. Set-NetUDPSetting

Correct Answer: C Section: (none) Explanation

Explanation/Reference:

QUESTION 95

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.

You have two servers named Server1 and Server2 that run Windows Server 2016. Server1 and Server2 have the Hyper-V server role installed and are nodes in a failover cluster.

On Server1, an administrator creates a virtual machine named VM1.

You need to configure VM1 for high availability.

Which tool should you use?

- A. the clussvc.exe command
- B. the cluster.exe command
- C. the Computer Management snap-in
- D. the configurehyperv.exe command
- E. the Disk Management snap-in
- F. the Failover Cluster Manager snap-in
- G. the Hyper-V Manager snap-in
- H. the Server Manager app

Correct Answer: F Section: (none) Explanation

Explanation/Reference: Explanation: http://windowsitpro.com/hyper-v/make-

vm-highly-available-windows-server-2012

QUESTION 96

You have a server named Server1 that runs Windows Server 2016.

Server1 has four SCSI disks and a storage pool named Pool1 that contains three disks.

You create a virtual disk named Disk 1 that uses a mirrored layout.

You create a partition named Partition1 that uses all of the available space on Disk 1.

You need to extend Partition1.

What should you do first?

- A. From Windows PowerShell, run the Resize-VirtualDisk cmdlet.
- B. From Windows PowerShell, run the Resize-VHD cmdlet.
- C. From Disk Management, modify the properties of Partition1.

- D. From Windows PowerShell, run the **Resize-Partition** cmdlet.
- E. From Windows PowerShell, run the Resize-StorageTier cmdlet.
- F. From Disk Management, extend a volume.
- G. From Windows PowerShell, run the Expand-IscsiVirtualDisk cmdlet.

Correct Answer: A Section: (none) Explanation

Explanation/Reference:

QUESTION 97

You have a Hyper-V host named Server1 that runs Windows Server 2016.

The host has two virtual machines (VMs) named VM1 and VM2.

On the Hyper-V host, you create two virtual disks named Disk1 and Disk2.

You plan to create a test environment for Storage Spaces Direct.

You need to configure the VMs to connect to the virtual disks.

What should you use?

- A. An iSCSI target
- B. A virtual SCSI controller
- C. A virtual fibre channel adapter
- D. A virtual IDE controller

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

References: https://blogs.msdn.microsoft.com/clustering/2015/05/27/testing-storage-spaces-direct-using-windows-server-2016-virtual-machines/

QUESTION 98

CEplus

Your network contains an Active Directory domain.

The domain contains two Hyper-V hosts.

You plan to perform live migrations between the hosts.

You need to ensure that the live migration traffic is authenticated by using Kerberos.

What should you do first?

- A. From Server Manager, install the Host Guardian Service server role on a domain controller.
- B. From Active Directory Users and Computers, add the computer accounts for both servers to the Cryptographic Operators group.
- C. From Active Directory Users and Computers, modify the Delegation properties of the computer accounts for both servers.
- D. From Server Manager, install the Host Guardian Service server role on both servers.

Correct Answer: C Section: (none) Explanation

Explanation/Reference:

Explanation:

QUESTION 99

A company named Contoso, Ltd has five Hyper-V hosts that are configured as shown In the following table.

Hyper-V host name	Configuration
Server1	Windows Server 2012 R2 and an Intel Xeon E7 processor
Server2	Windows Server 2012 R2 and an Intel i7 processor
Server3	Windows Server 2016 and an Intel i7 processor
Server4	Windows Server 2016 and an AMD Opteron processor
Server5	Windows Server 2016 and an Intel Xeon E7 processor

What are two valid live migration scenarios for virtual machines in your environment? Each correct answer presents a complete solution.

- A. from Server4 to Server5
- B. from Server1 to Server5
- C. from Server3 to Server4
- D. from Server2 to Server3

Correct Answer: BD Section: (none) Explanation

Explanation/Reference:

Explanation:

Common requirements for any form of live migration:

- Two (or more) servers running Hyper-V that:
 - Support hardware virtualization.
 - Use processors from the same manufacturer. For example, all AMD or all Intel.
 - Belong to either the same Active Directory domain, or to domains that trust each other.

Incorrect Answers:

A, C: Live migration is only supported on processors from the same manufacturer.

QUESTION 100

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After your answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory forest named contoso.com.

You need to identify which server is the schema master.

Solution: From Windows PowerShell, you run Get-ADDomainController -Discover -Service 2.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

References: https://blogs.technet.microsoft.com/mempson/2007/11/08/how-to-find-out-who-has-your-fsmo-roles/

QUESTION 101

You have Nano Server image named Diskl .vhdx.

You mount Diskl .vhdx.

You need to add a folder that contains several files to the image.

Which tool or cmdlet you should use?

- A. Copy-Item
- B. Add-WindowsImage
- C. Add-WindowsPackage
- D. Edit-NanoServerImage
- E. Dism
- F. Nano Server Image Builder

Correct Answer: A Section: (none) Explanation

Explanation/Reference:

QUESTION 102

Your network contains an Active Directory domain. The domain contains a new file server named Server1 that runs a Server Core installation of Windows Server 2016.

Server1 has an ReFS-formatted volume D: and NTFS-formatted volume E:. The volumes do not contain any data.

You install the Data Deduplication role service on Server1.

You need to implement Data Deduplication for volumes on D: and E:.

Solution: From Windows PowerShell, you run Format-Volume D: -FileSystem EXFat and Enable-DeDupVolume -Volume D:,E:.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

QUESTION 103

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

___.com

After your answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory forest named contoso.com.

You need to identify which server is the schema master.

Solution: From a command prompt, you run **netdom query fsmo**.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A Section: (none) Explanation

Explanation/Reference:

QUESTION 104

You have two servers named Server1 and Server2.

A firewall exists between Server1 and Server2.

Both servers run Windows Server Update Services (WSUS).

Server1 downloads updates from Microsoft update.

Server2 must synchronize updates from Server1.

Which port should to open on the firewall?

- A. 80
- B. 443
- C. 3389
- D. 8530

Correct Answer: D Section: (none) Explanation

Explanation/Reference: QUESTION 105

You have two servers named Server1 and Server2 that run Windows Server 2016.

You plan to implement Storage Replica to replicate the contents of volumes on Server1 to Server2.

You need to ensure that the replication traffic between the servers is limited to a maximum of 100 Mbps.

Which cmdlet should you run?

- A. New-NetQosPolicy
- B. Set-NetworkController
- C. New-NetTransportFilter
- D. New-StorageQosPolicy
- E. Set-NetTCPSetting
- F. Set-NetUDPSetting

QUESTION 109

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. You have an Exchange Server 2016 organization.

Some users access the mailbox on their mobile device by using Exchange ActiveSync.

You need to prevent the users from synchronizing more than one month of email or calendar data to their device.

Solution: You deploy an Allow/Block/Quarantine policy.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

QUESTION 110

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You network contains an Active Directory domain named contoso.com.

You need to create a Nano Server image named Nano1 that will be used as a virtualization host. The Windows Server 2016 source files are located in drive D.

Solution: You run the following cmdlet.

```
New-NanoServerImage -Edition Datacenter -DeploymentType Host -Defender EnableEMS -MediaPath 'D:\' -TargetPath C:\Nano1\Nano1.wim -ComputerName Nano1 -DomainName Contoso.com
```

Does this meet the goal?

A. Yes

B. No

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

QUESTION 111

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You network contains an Active Directory forest named contoso.com. The forest contains a child domain named eu.contoso.com.

You plan to implement live migration between two Hyper-V hosts that run Windows Server 2016. The hosts are configured as shown in the following table.

Host name	Configuration
Host1	Is a member of the contoso.com domain
	 Uses an Intel Xeon processor released in 2012
	 Has an external virtual switch named Switch1
	 Hosts a virtual machine named VM1 that connects
	to Switch1
Host2	Is a member of the eu.contoso.com domain
	 Uses an Intel Xeon processor released in 2016
	Has an external virtual switch named Switch1

You need to ensure that you can perform a live migration of VM1 from Host1 to Host2.

Solution: You shut down VM1, configure the processor compatibility settings, and then start VM1.

Does meet the goal?

A. Yes

B. No

Correct Answer: A Section: (none) Explanation

QUESTION 112

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a server named Server1 that runs Windows Server 2016.

You plan to use Windows Server Backup to back up all of the data on Server1.

You create a new volume on Server1.

You need to ensure that the new volume can be used as a backup target.

The backup target must support incremental backups.

Solution: You assign a drive letter to the volume, and you format the volume by using exFAT.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

QUESTION 113

Your network contains an Active Directory domain named contoso.com. The domain contains a Hyper-V host named Server1 that runs Windows Server 2016.

Server1 hosts four virtual machines that are members of the domain. The virtual machines are configured as shown in the following table.

Virtual machine name	Operating system	Virtual machine generation	Type of VHD file
VM1	Windows 10	2	VHD
VM2	Windows Server 2016	2	VHD
VM3	Windows Server 2012 R2	2	VHDx
VM4	Windows Server 2016	1	VHDx

Which virtual machines can you manage by using PowerShell Direct?

A. VM1, VM2, and VM3

B. VM1, VM2, and VM4

C. only VM2

D. only VM4

Correct Answer: B

Section: (none) Explanation

Explanation/Reference:

Explanation:

To use PowerShell Direct, the host operating system must run at least Windows 10 or Windows Server 2016.

References: <a href="https://docs.microsoft.com/en-us/windows-server/virtualization/hyper-v/manage/manage-windows-virtual-machines-with-powershell-direct#whatsrequired-to-use

QUESTION 114

You have two Hyper-V hosts named Server1 and Server2 that run Windows Server 2016. The hosts are nodes in failover cluster.

A highly available virtual machine named VM1 is running on Server1.

You need to move VM1 to Server2 while minimizing downtime.

What should you do?

A. From Windows PowerShell, run Move-ClusterGroup

C. From Failover Cluster Manager, use the **Move Virtual Machine Storage** option.

D. From Windows PowerShell, run Move-VM.

Correct Answer: A Section: (none) Explanation

Explanation/Reference:

QUESTION 115

You have two Hyper-V hosts named Server1 and Server2 that run Windows Server 2016. Server1 hosts a virtual machine named VM1 that is in a Running state.

On Server1, you export VM1 and then you import VM1 on Server2.

What is the current state of VM1 on Server2?

- A. Paused
- B. Off

C. Saved

D. Running

Correct Answer: C Section: (none) Explanation

Explanation/Reference:

References: https://blog.workinghardinit.work/2016/06/16/live-export-a-running-virtual-machine-or-a-checkpoint/

QUESTION 116

You have a file server named Server1 that runs Windows Server 2016.

Object access auditing is configured on Server1.

You need to filter the Security event log to show all log entries that relate to a user named User1.

What should you do?

- A. Right-click the **Security** log, and then click **Filter Current Log...** On the Filter tab, type a value in the User box.
- B. Right-click the **Security** log, and then click **Filter Current Log...** On the Filter tab, select a value from the Event sources box.
- C. Right-click the **Security** log, and then click **Create Custom View...** On the Filter tab, type a value in the User box.
- D. Right-click the **Security** log, and then click **Filter Current Log...** On the XML tab, modify the QueryList entry and set an EventData tag.

Correct Answer: A Section: (none) Explanation

Explanation/Reference:

Explanation:

Right clicking the event log name and selecting the "Filter Current Log" will display various options for filtering the event log.

These options are:

- Time logged: There are pre-canned filters for the last hour, last 12 hours, last 24 hours, last week and last 30 days. Additionally you can specify a custom range.
- Event level: Choose to show only events that match the specified level critical, warning etc. •

Event Source: Select to only see events from MSI Installer, DHCP client etc.

- EventID: Specify the event ID.
- * Keywords: Specify filters based on Audit Failure, Audit success

- User
- Computer(s)

References: https://blogs.technet.microsoft.com/rmilne/2014/08/06/quick-tip-event-viewer-filtering/

QUESTION 117

You have a server named Server1 that runs Windows Server 2016.

The server has an application named App1. App1 writes entries to the Application event log when errors are encountered. The events have IDs of either 111 or 112.

You need to restart the service whenever either of these events is logged.

What should you do?

- A. From Windows PowerShell, run the **Get-SMServerEvent** cmdlet and pipe the output to the **Start-NetEventSession** cmdlet.
- B. From Event Viewer, create a subscription that has a filter for the event IDs.
- C. From Task Scheduler, use Create Task to create one task that includes triggers for both event IDs.
- D. From Windows PowerShell, run the **Get-Event** cmdlet and pipe the output to the **Start-NetEventSession** cmdlet.

Correct Answer: C Section: (none) Explanation

Explanation/Reference:

QUESTION 118

HOTSPOT

You have two servers named Server1 and Server2 that run Windows Server 2016. Server1 hosts two containers named Container1 and Container2.

The servers and the containers are configured as shown in the following table.

Name	IP address	IP subnet mask
Server1	10.10.50.20	255.255.255.0
Server2	10.10.50.21	255.255.255.0
Container1	172.16.1.100	255.255.255.0
Container2	172.16.1.101	255.255.255.0

Container1 hosts a website on port 8080.

You create a port mapping between port 8080 on Container1 and port 80 on Server1.

Which URL can you use to access the website from Server1, Server2, and Container2? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

QUESTION 119

You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 has ab external virtual switch named Switch1. Server1 hosts a virtual machine named VM1 that runs Windows Server 2016. VM1 has one network adapter. The network adapter connects to Switch1.

You need to limit the maximum network bandwidth available to VM1 to 100 Mbps. The solution must limit the bandwidth for VM1 only.

Which cmdlet should you run?

- A. Set-NetAdapter
- B. **Set- VMNetworkAdapter**
- C. Set-VM
- D. Set-NetAdapterVmq
- E. Set-NetworkSwitchPortPro perty

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

The Set-VMNetworkAdapterVlan cmdlet configures virtual LAN settings for the traffic through a virtual network adapter.

Incorrect Answers:

A: The Set-NetAdapter cmdlet sets the basic properties of a network adapter such as virtual LAN (VLAN) identifier (ID) and MAC address.

C: The Set-VM cmdlet configures a virtual machine.

D: The Set-NetAdapterVmq cmdlet sets the virtual machine queue (VMQ) properties of a network adapter. VMQ is a scaling networking technology for Hyper-V switch that improves network throughput by distributing processing of network traffic for multiple virtual machines among multiple processors.

https://docs.microsoft.com/en-us/powershell/module/hyper-v/set-vmnetworkadaptervlan?view=win10-ps https://docs.microsoft.com/en-us/powershell/module/hyper-v/set-vm?view=win10-ps https://docs.microsoft.com/en-us/powershell/module/hyper-v/set-vm?view=win10-ps https://docs.microsoft.com/en-us/powershell/module/netadapter/set-netadapter/s

QUESTION 120

You have a Windows Server 2016 failover cluster that contains two servers named Server1 and Server2.

The Cluster Service on Server1 fails.

You need to identify the cause of the failure.

What should you do?

- A. From Windows PowerShell, run the **Get-ClusterNode** cmdlet.
- B. From Event Viewer, review the Application event log.
- C. From Windows PowerShell, run the Get-ClusterLog cmdlet.
- D. From Event Viewer, review the System event log.

Correct Answer: C Section: (none) Explanation

Explanation/Reference:

References: https://blogs.msdn.microsoft.com/clustering/2015/05/14/windows-server-2016-failover-cluster-troubleshooting-enhancements-cluster-log/

QUESTION 121

You have a server named Server1 that is an iSCSI target. You have a server named Server2 that runs Windows Server 2016. Server2 has an iSCSI disk named Disk1 that is hosted on Server1. Disk1 contains one volume that is assigned a drive letter of E.

You need to increase the size of Disk1.

What should you do?

- A. Run the Resize-IscsiVirtualDisk cmdlet and specify the -ComputerName Server2 parameter.
- B. Run the Resize-IscsiVirtualDisk cmdlet and specify the -ComputerName Server1 parameter.
- C. Run the **Resize-Partition** cmdlet and specify the *-ComputerName Server1* parameter.
- D. Run the Resize- Partition cmdlet and specify the -ComputerName Server2 parameter.

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

The Resize-IscsiVirtualDisk cmdlet resizes a virtual disk either by expanding or compacting an existing virtual disk.

The -ComputerName parameter specifies the computer name, or IP address, of the remote computer, if this cmdlet is run on a remote computer. If you do not specify a value for this parameter, the cmdlet uses the local computer.

Incorrect Answers:

A: Resize-IscsiVirtualDisk would be run on Server2. Server2 has an iSCSI disk named Disk1 that is hosted on Server1. Therefore, Server1 would be specified in the -ComputerName parameter.

C, D: The Resize-Partition cmdlet resizes a partition and the underlying file system. It does not take a -ComputerName parameter.

References:

https://docs.microsoft.com/en-us/powershell/module/iscsitarget/resize-iscsivirtualdisk?view=win10-ps https://docs.microsoft.com/en-us/powershell/module/storage/resize-partition?view=win10-ps

QUESTION 122

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After your answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain. The domain contains a new file server named Server1 that runs a Server Core installation of Windows Server 2016.

Server1 has an ReFS-formatted volume D: and NTFS-formatted volume E: The volumes do not contain any data.

You install the Data Deduplication role service on Server1.

You need to implement Data Deduplication for volumes on D: and E:.

Solution: From Windows PowerShell, you run Format-Volume D: -FileSystem NTFS and Enable-DeDupVolume -Volume D:,E:.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A Section: (none) Explanation

Explanation/Reference:

Explanation:

Data Deduplication is supported on NTFS formatted volumes. You, therefore, need to format the ReFS-formatted volume D: as an NTFS volume. The Enable-DedupVolume cmdlet enables data deduplication on one or more volumes.

References: https://docs.microsoft.com/en-us/powershell/module/deduplication/enable-dedupvolume?view=win10-ps

QUESTION 123

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

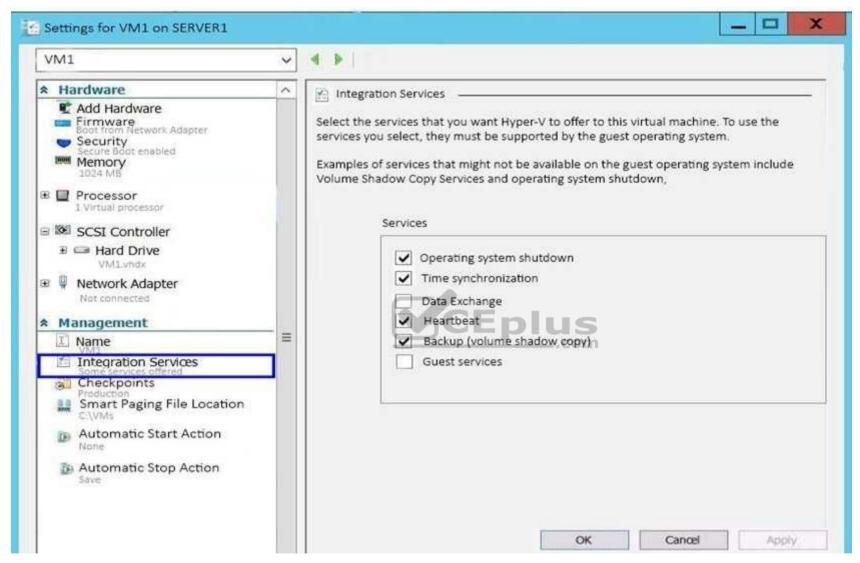

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Hyper-V host named Server1 that hosts a virtual machine named VM1. Server1 and VM1 run Windows Server 2016.

The settings for VM1 are configured as shown in the exhibit. (Click the **Exhibit** button.)

You need to ensure that you can use the Copy-VMFile cmdlet on Server1 to copy files from VM1.

Solution: You enable the Guest services integration service for VM1.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A Section: (none) Explanation

Explanation/Reference:

Explanation:

The guest service allows the Hyper-V administrator to copy files to a running virtual machine without using a network connection. Beforehand the only way to copy files to the virtual machine was for both the virtual machine and the host be connected to same network and then either use file services to copy file or to create a remote desktop session to the virtual machine and copy files via RDS session.

To copy a file to a virtual machine you need to use the Copy-VMFile PowerShell cmdlet.

References: https://technet.microsoft.com/en-us/library/dn798297(v=ws.11).aspx

QUESTION 124

You have a server named Server1 that runs Windows Server 2016.

Server1 has four SCSI disks and a storage pool named Pool1 that contains three disks.

You create a virtual disk named Disk 1 that uses a mirrored layout.

You create a partition named Partition1 that uses all of the available space on Disk 1.

You need to extend Partition1.

https://www.vceplus.com/ What

should you do first?

- A. From Windows PowerShell, run the **Resize-Partition** cmdlet.
- B. From Disk Management, modify the properties of Partition1.

- C. From the Storage Pools page in Server Manager, extend a virtual disk.
- D. From Disk Management, extend a volume.
- E. From Windows PowerShell, run the Resize-VHD cmdlet.

Correct Answer: C Section: (none) Explanation

Explanation/Reference:

References: https://charbelnemnom.com/2015/03/step-by-step-how-to-extend-and-resize-a-two-way-mirrored-storage-tiered-space-storagespaces-ws2012r2/

QUESTION 125

You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 hosts a virtual machine named VM1.

You need to provide VM1 with direct access to a graphics processing unit (GPU) on Server1.

What should you do first?

A. On VM1, install the Quality Windows Audio Video Experience (qWave) feature.

- B. Dismount the display adapter on Server1.
- C. In the settings of VM1, add a RemoteFX 3D Video Adapter.
- D. Disable the display adapter device on Server1.

Correct Answer: D Section: (none) Explanation

Explanation/Reference:

Explanation:

Before the physical device is allowed to be passed through to the VM, the device must be disabled on the host system. The physical device must be accessible/available exclusively to the VM only.

References:

Introduction to Windows Server 2016 Hyper-V DiscreteDevice Assignment, page 5 https://lenovopress.com/lp0088.pdf

QUESTION 126

You have a Windows Server 2106 failover cluster named Cluster1 that contains four nodes named Server1, Server2, Server3, and Server4. Cluster1 hosts 40 virtual machines that are distributed evenly across the nodes.

Server1 and Server2 are located in a data center in Madrid. Server3 and Server4 are located in a data center in Barcelona.

You need to ensure that when you pause a node, the clustered virtual machines will always attempt to move automatically to another node in the same data center before attempting to move to a node in the other data center.

Which two actions should you perform? Each correct answer presents part of the solution.

- A. Run the **New-ClusterFaultDomain** cmdlet.
- B. Run the Add-ClusterGroup cmdlet.
- C. Configure a file share witness for each data center.
- D. Run the **Set-ClusterFaultDomain** cmdlet.
- E. Create an Active Directory site for each data center.
- F. Change the quorum configuration of the cluster to **Node Majority**.

Correct Answer: BC Section: (none) Explanation

Explanation/Reference:

QUESTION 127

You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 hosts a virtual machine named VM1. VM1 has the following settings:

Nested virtualization is enabled.

Dynamic Memory is disabled.

VM1 is currently running.

You need to adjust the amount of memory assigned to VM1 as quickly as possible.

What should you do first?

- A. Change the memory buffer setting of VM1.
- B. Pause VM1.
- C. Shut down VM1.
- D. Enable Dynamic Memory for VM1.

Correct Answer: C Section: (none) Explanation

Explanation/Reference:

References: https://docs.microsoft.com/en-us/virtualization/hyper-v-on-windows/user-guide/nested-virtualization

QUESTION 128

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

A company named Contoso, Ltd. has several servers that run Windows Server 2016. Contoso has a Hyper-V environment that uses failover clustering and Windows Server Update Services (WSUS). The environment contains several Windows containers and several virtual machines.

The WSUS deployment contains one upstream server that is located on the company's perimeter network and several downstream servers located on the internal network. A firewall separates the upstream server from the downstream servers.

You plan to deploy a human resources application to a new server named HRServer5. HRServer5 contains a FAT32-formatted data volume.

The CIO of Contoso identifies the following requirements for the company's IT department:

Deploy a failover cluster to two new virtual machines.

- Store all application databases by using Encrypted File System (EFS).
- Ensure that each Windows container has a dedicated IP address assigned by a DHCP server.
- Produce a report that lists the processor time used by all of the processes on a server named Server1 for five hours.
- Encrypt all communication between the internal network and the perimeter network, including all WSUS communications.
- Automatically load balance the virtual machines hosted in the Hyper-V cluster when processor utilization exceeds 70 percent.

Which two actions should you perform to meet the encryption requirement for WSUS? Each correct answer presents part of the solution.

- A. Require SSL on the Inventory virtual directory.
- B. Require SSL on the ClientWebService virtual directory.
- C. Create a firewall rule to allow TCP port 443.
- D. Create a firewall rule to allow TCP port 8531.

Correct Answer: BC Section: (none) Explanation

Explanation/Reference:

References:

https://technet.microsoft.com/en-us/library/bb633246.aspx https://en.wikipedia.org/wiki/List_of_TCP_and_UDP_port_numbers

QUESTION 129

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

CEplus

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have two servers that run Windows Server 2016.

You plan to create a Network Load Balancing (NLB) cluster that will contain both servers.

You need to configure the network cards on the servers for the planned NLB configuration.

Solution: You configure the network cards to be on a separate subnet and to have static IP addresses. You configure the cluster to use unicast.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

References: https://technet.microsoft.com/en-us/windows-server-docs/networking/technologies/network-load-balancing

QUESTION 130

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a server named Server1 that runs Windows Server 2016. Server1 has the Hyper-V server role and Docker installed.

You pull the Microsoft/iis Docker image to Server1.

You need to view the available space in the Microsoft/iis Docker image.

Solution: You run the command docker run -d Microsoft/iis.

You open Disk Management on Server1.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

QUESTION 131

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have two servers that run Windows Server 2016.

You have a server named Server1 that runs Windows Server 2016. Server1 has the Hyper-V server role and Docker installed.

You pull the Microsoft/iis Docker image to Server1.

You need to view the available space in the Microsoft/iis Docker image.

Solution: You run the following commands.

```
docker run -name container1 -isolation hyperv -d Microsoft/iis
docker exec -i container1 cmd.exe dir
```

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

QUESTION 132

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have two servers that run Windows Server 2016.

You have a server named Server1 that runs Windows Server 2016. Server1 has the Hyper-V server role and Docker installed.

You pull the Microsoft/iis Docker image to Server1.

You need to view the available space in the Microsoft/iis Docker image.

Solution: You run the following commands.

docker run -name container1 -d Microsoft/iis
docker exec -i container1 cmd.exe dir

Does this meet the goal?

A. Yes

B. No

Correct Answer: A Section: (none) Explanation

Explanation/Reference:

QUESTION 133

DRAG DROP

You have a server named Server1 that runs Windows Server 2016.

You open a command prompt on Server1 and run the following commands.

C:\>diskpart

Microsoft DiskPart version 10.0.14393.0

Copyright (c) 1999-2013 Microsoft Corporation.

On computer: SERVER1

DISKPART> list disk

Disk ### Status Size Free Dyn Gpt

Disk 0 Online 127 GB 0 B Disk 1 Online 1800 GB 0 B

DISKPART> select disk 1

Disk 1 is now the selected disk.

DISKPART> list partition

Partition ### Type Size Offset

Partition 1 Primary 1799 GB 1024 KB

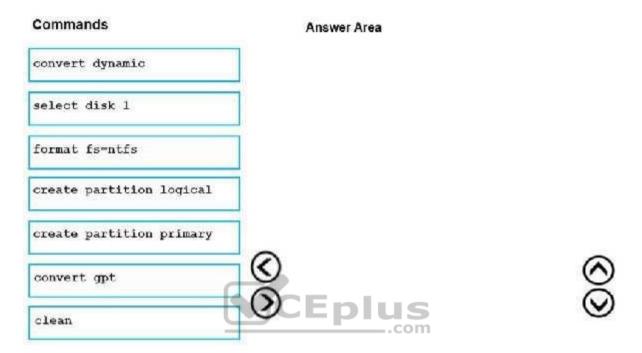

You back up the data on Disk 1.

You plan to convert Disk 1 to a GPT disk, and then to restore the data to Disk 1.

Which four DiskPart commands should you run in sequence before you restore the data? To answer, move the appropriate commands from the list of commands to the answer area and arrange them in the correct order.

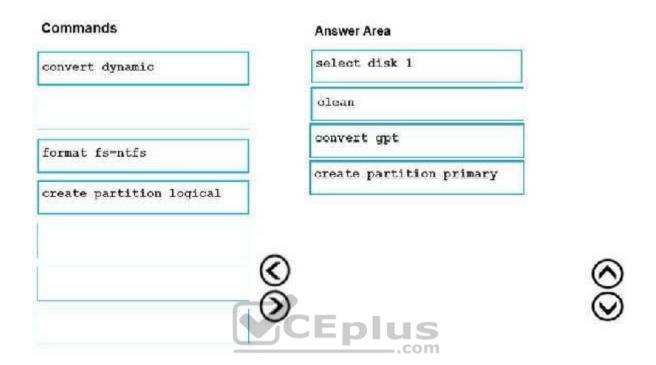

Select and Place:

Correct Answer:

Section: (none) Explanation

Explanation/Reference:

References: https://docs.microsoft.com/en-us/windows-server/administration/windows-commands/create-partition-primary

QUESTION 134

You have four servers named Server1, Server2, Server3, and Server4 that run Windows Server 2016. Server1 and Server2 have the Hyper-V server role installed. Server1 hosts a virtual machine named VM1. Server2 hosts a virtual machine named VM2. Server3 hosts the disks and the configurations of both virtual machines on an SMB share named VMShare. All servers are joined to an Active Directory domain.

You use Server4 to manage Hyper-V operations on Server1 and Server2.

From Server4, you attempt to perform a live migration of VM1 and VM2, but you receive the following error message: "No credentials are available in the security package".

You need to ensure that you can perform the live migration of VM1 and VM2 between Server1 and Server2 while signed in to Server4.

What should you do?

- A. From Active Directory Users and Computers, modify the properties of Server4. Configure the delegation settings to trust the computer for delegation of cifs.
- B. From Windows PowerShell on Server3, run the remove-SMBMultiChannelConstraint cmdlet, and then assign Server4 Full Control permissions to VMShare.
- C. From Active Directory Users and Computers, modify the properties of Server1 and Server2. Configure the Delegation settings to trust the computers for delegation of the Microsoft Virtual System Migration Service.
- D. From Active Directory Users and Computers, modify the properties of your user account. Modify the Account is sensitive and cannot be delegated setting.

Correct Answer: C Section: (none) Explanation

Explanation/Reference:

References: https://docs.microsoft.com/en-us/windows-server/virtualization/hyper-v/deploy/set-up-hosts-for-live-migration-without-failover-clustering

QUESTION 135

You have a server that runs Windows Server 2016 Standard.

You create a new three-way mirror storage space. You format the storage space by using ReFS.

Which two features can you use on the new storage space? Each correct answer presents a complete solution.

- A. file and folder permissions
- B. disk quotas
- C. Encrypting File System (EFS)
- D. long file names
- E. Data Deduplication
- F. Shrink volume

Correct Answer: AE Section: (none) Explanation

Explanation/Reference:

References:

https://docs.microsoft.com/en-us/windows-server/storage/refs/refs-overview

QUESTION 136

You have a Nano Server named Nano1.

Nano1 is configured to perform real-time protection scans by using Windows Defender.

You need to ensure that all of the files located in D:\App1\Data are excluded from the real-time protection scans.

What should you do?

- A. Run the Add-MpPreference cmdlet and specify the -ExclusionPath parameter
- B. Run the Import-ShieldingDataFile cmdlet and specify the -ShieldingDataFilePath parameter
- C. Run the Protect-ShieldingDataFile cmdlet and specify the -ShieldingDataFilePath parameter
- D. Run the **Get-ChildItem** cmdlet and specify the Exclude parameter
- E. From the properties of the D:\App1\Data folder, enable the Hidden attribute.
- F. From the properties of the D:\App1\Data folder, modify the permissions
- G. From a command prompt, run the **attrib** command and specify the –s parameter.

Correct Answer: A Section: (none) Explanation

Explanation/Reference:

References:

https://docs.microsoft.com/en-us/windows/security/threat-protection/windows-defender-antivirus/configure-extension-file-exclusions-windows-defender-antivirus

QUESTION 137

You have a server named Server1 that runs Windows Server 2016 and has the File and Storage Services server role installed.

Server1 has an ReFS-formatted volume named Volume1 that is 512 GB. Volume1 is mounted as C:\App1\temp.

You need to ensure that you can enable deduplication of Volume1.

What should you do?

- A. Format Volume1.
- B. Unmount Volume1.
- C. Install a Windows feature.
- D. Initialize the physical disk that contains Volume1.

https://www.vceplus.com/

Correct Answer: C Section: (none) Explanation

Explanation/Reference:

References:

https://docs.microsoft.com/en-us/windows-server/storage/data-deduplication/install-enable https://docs.microsoft.com/en-us/windows-server/storage/refs/refs-

<u>overview</u>

QUESTION 138

You plan to deploy three servers that will run Windows Server 2016. The servers will be configured as shown in the following table.

Server name	Hard disk configuration	
Server1	Disk1: 250-GB, NTFS-formatted Disk2: 4-TB, ReFS-formatted	
Server2	Disk1: 1-TB, NTFS-formatted Disk2: 2-TB, NTFS-formatted Disk3: 500-GB, exFAT-formatted	plu
Server3	Disk1: 8-TB, NTFS-formatted Disk2: 2-TB, ReFS-formatted Disk3: 1-TB, ReFS-formatted	

You need to ensure that you can use all of the available space on each disk.

What is one of the disks that you must initialize as a GPT disk?

- A. Disk3 on Server3
- B. Disk1 on Server2
- C. Disk2 on Server2
- D. Disk1 on Server3
- E. Disk2 on Server3
- F. Disk1 on Server1
- G. Disk3 on Server2

Correct Answer: D Section: (none) Explanation

Explanation/Reference:

Explanation:

GPT is more robust and allows for volumes bigger than 2 TB. The two disks that are larger than 2 TB are Disk2 on Server1 and Disk1 on Server3.

References:

https://docs.microsoft.com/en-us/windows-server/storage/disk-management/initialize-new-disks#about-partition-styles-GPT-and-MBR

QUESTION 139

You have two Hyper-V hosts named Server1 and Server2 that run Windows Server 2012 R2. The servers are nodes in a failover cluster named Cluster1.

You perform a rolling upgrade of the cluster nodes to Windows Server 2016.

You need to ensure that you can implement the Virtual Machine Load Balancing feature.

Which cmdlet should you use?

- A. Update-ClusterNetWorkNameResource
- B. Set-ClusterGroupSet
- C. Set-CauClusterRole
- D. Update-ClusterFunctionalLevel

Correct Answer: D Section: (none) Explanation

Explanation/Reference:

References:

https://docs.microsoft.com/en-us/windows-server/failover-clustering/cluster-operating-system-rolling-upgrade#cluster-os-rolling-upgrade-process

QUESTION 140

You have a Windows Server 2016 failover cluster named Cluster1 that contains four nodes named Server1, Server2, Server3, and Server4.

You need to configure Cluster 1 to use directly attached storage to store several virtual machines.

You run the Enable-ClusterStorageSpacesDirect cmdlet on Server1.

What should you do next?

- A. Run the Enable-ClusterStorageSpacesDirect cmdlet on the other three nodes.
- B. Create volumes.
- C. Create a storage pool.
- D. Run the Add-ClusterResource cmdlet on all of the nodes.

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

References: https://medium.com/beyond-the-helpdesk/setting-up-and-configuring-storage-spaces-direct-in-windows-server-2016-4d2be85a8f7d

QUESTION 141

You have a Hyper-V server named Server1 that runs Windows Server 2012 R2.

Server1 hosts a virtual machine named VM1 that runs Windows Server 2016. VM1 connects to an external virtual switch named Switch1.

You can ping VM1 from Server1.

You upgrade Server1 to Windows Server 2016.

You need to ensure that you can connect to VM1 by using PowerShell Direct.

What should you do?

- A. Configure the firewall rules on Server1.
- B. Enable the Hyper-V extensible switch extensions on Server1.
- C. Upgrade the configuration version of VM1.
- D. Configure the firewall rules on VM1.

Correct Answer: C Section: (none) Explanation

Explanation/Reference:

References:

__.com

https://docs.microsoft.com/en-us/windows-server/virtualization/hyper-v/deploy/upgrade-virtual-machine-version-in-hyper-v-on-windows-or-windows-server

QUESTION 142

You have a server named Server1 that runs Windows Server 2016. Windows Defender is enabled on Server1.

Server1 runs an application named App1 that stores various types of files in Microsoft OneDrive for Business, MicrosoftOneDrive, and Microsoft SharePoint Online. App1 also interacts with several local services.

You need to prevent Windows Defender from scanning any files opened by App1.

What should you do on Server1?

- A. From the Windows Defender settings, configure a file exclusion.
- B. Run the **New-CiPolicy** cmdlet.
- C. Modify the real-time protection settings in Windows Defender.
- D. From the Windows Defender settings, configure a process exclusion.
- E. Run the **Set-ExecutionPolicy** cmdlet.
- F. Run the **New-AppLockerPolicy** cmdlet.

Correct Answer: D Section: (none) Explanation

Explanation/Reference: References: <a href="https://docs.microsoft.com/en-us/windows/security/threat-protection/windows-defender-antivirus/configure-process-opened-file-exclusions-windows-defender-antivirus https://docs.microsoft.com/en-us/windows/security/threat-protection/windows-defender-antivirus/configure-server-exclusions-windows-defender-antivirus

QUESTION 143

You have a server named Server1 that runs Windows Server 2016. Server1 has two network adapters that support single root I/O virtualization (SR-IOV). The network adapters are from two different vendors.

You plan to install the Hyper-V server role on Server1, and then to create a virtual machine named VM1 that runs Windows Server 2016. VM1 will use SR-IOV.

You need to ensure that VM1 can use both network adapters for load balancing and failover.

What should you do?

- A. On Server1, create two virtual switches without embedded teaming. On VM1, create one NIC team.
- B. On Server1, create one virtual switch without embedded teaming. On VM1, create one NIC team.

- C. On Server1, create one NIC team. On VM1, create one NIC team.
- D. On Server1, create one virtual switch that has embedded teaming. On VM1, create two NIC teams.

Correct Answer: A Section: (none) Explanation

Explanation/Reference:

QUESTION 144

You have a server named Server1 that runs Windows Server 2016.

Server1 is a Docker host.

You are creating a Dockerfile to build a Docker image.

You need to add a file named File1.txt from Server1 to C:\Folder1\ in the Docker image.

What are two possible commands that you can use to achieve the goal? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

A. COPY file1.txt c:/folder1/

B. copy-item file1.txt folder1\file1.txt

C. ROBOCOPY file.txt \folder1\

D. XCOPY file1.txt c:\folder1\

E. ADD file1.txt /folder1/

Correct Answer: AE Section: (none) Explanation

Explanation/Reference:

References:

https://docs.microsoft.com/en-us/virtualization/windowscontainers/manage-docker/manage-windows-dockerfile

QUESTION 145

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are a server administrator at a company named Contoso, Ltd.

Contoso has a Windows Server 2016 Hyper-V environment configured as shown in the following table.

Hyper-V host name	Configuration	Virtual switch name
Host1	 Uses an Intel processor Is a member of a SAN named SAN1 	Switch1
Host2	 Uses an AMD processor Has local storage only 	Switch2
Host3	 Uses an Intel processor Is a member of a SAN named SAN1 	Switch1
Host4	- Uses an Intel processor - Has local storage only	Switch2

All of the virtual switches are of the external type.

You need to ensure that you can move virtual machines between the hosts without causing the virtual machines to disconnect from the network.

Solution: You implement live migration by using Host1 and Host3.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A Section: (none) Explanation

Explanation/Reference:

QUESTION 146

You plan to deploy three servers that will run Windows Server 2016. The servers will be configured as shown in the following table.

Server name	Hard disk configuration	
Server1	Disk1: 250-GB, NTFS-formatted Disk2: 4-TB, ReFS-formatted	
Server2	Disk1: 1-TB, NTFS-formatted Disk2: 2-TB, NTFS-formatted Disk3: 500-GB, exFAT-formatted	
Server3	Disk1: 8-TB, NTFS-formatted Disk2: 2-TB, ReFS-formatted Disk3: 1-TB, ReFS-formatted	

You need to ensure that you can use all of the available space on each disk.

What is one of the disks that you must initialize as a GPT disk?

A. Disk2 on Server1

B. Disk1 on Server2

C. Disk1 on Server1

D. Disk3 on Server3

Correct Answer: A Section: (none) Explanation

Explanation/Reference:

Explanation:

GPT is more robust and allows for volumes bigger than 2 TB. The two disks that are larger than 2 TB are Disk2 on Server1 and Disk1 on Server3.

 ${\color{red}References:} \ \underline{\text{https://docs.microsoft.com/en-us/windows-server/storage/disk-management/initialize-new-disks\#about-partition-styles-GPT-and-MBR}$

QUESTION 147

You have a server named Server1 that runs Windows Server 2016.

You need to install the DNS Server role on Server1.

What should you run?

- A. the dnscmd.exe command
- B. the Enable-WindowsOptionalFeature cmdlet
- C. the dns.exe command
- D. the **setup.exe** command
- E. the Install-Package cmdlet
- F. the optional features. exe command

Correct Answer: B Section: (none) Explanation

Explanation/Reference:

QUESTION 148

You have a server named Server1 that runs Windows Server 2016.

You need to install the DNS Server role on Server1.

What should you run?

- A. the Add-WindowsPackage cmdlet
- B. the dnscmd.exe command
- C. the optional features. exe command
- D. the Add-WindowsFeature cmdlet
- E. the **dnscmd.exe** command
- F. the **dns.exe** command

Correct Answer: D Section: (none) Explanation

Explanation/Reference:

Explanation:

The Add-WindowsFeature cmdlet installs one or more roles, role services, or features on either the local or a specified remote server that is running Windows Server 2008 R2. This cmdlet has been replaced by the Install-WindowsFeature cmdlet in Windows Server 2012 R2.

QUESTION 149

You have a Windows Server 2016 Server Core named Server1.

Server1 is configured to perform real-time protection scans by using Windows Defender.

You need to ensure that all of the files located in D:\App1\Data are excluded from the real-time protection scans.

What should you do?

- A. Run the Set-MpPreference cmdlet and specify the -ExclusionPath parameter
- B. Run the **Get-ChildItem** cmdlet and specify the **-Exclude** parameter
- C. From the properties of the D:\App1\Data folder, modify the permissions
- D. From a command prompt, run the **attrib** command and specify the **-s** parameter
- E. From the properties D:\App1\Data folder, enable the Hidden attribute.
- F. Run the Import-ShieldingDataFile cmdlet and specify the -ShieldingDataFilePath parameter
- G. Run the Protect-ShieldingDataFile cmdlet and specify the -ShieldingDataFilePath parameter.

Correct Answer: A Section: (none) Explanation

Explanation/Reference:

Explanation:

The Set-MpPreference cmdlet configures preferences for Windows Defender scans and updates.

https://docs.microsoft.com/en-us/powershell/module/defender/set-mppreference?view=win10-ps

QUESTION 150

You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 hosts a virtual machine named VM1 that runs Windows Server 2012. VM1 has the following configuration.

C:\>Get-VM VM1 | f1 Version, HardDrives, DynamicMemoryEnabled, Generation, MemoryStartup

Version : 5.0

HardDrives :{Hard drive on IDE controller number 0 at location 0}

DynamicMemoryEnabled :False Generation :1

MemoryStartup :536870912

C:\>Get-VMIntegrationService VM1

VMNan	ne Name	Enabled	PrimaryStatusDescription	${\tt SecondaryStatusDescription}$
	# #####	5 53 53- 5		1 (6 - 50 - 50 - 50 - 50 - 50
VM1	Guest Service Interface	False	OK	
VM1	Heartbeat	False	OK	
VM1	Key-Value Pair Exchange	False	OK	
VM1	Shutdown	False	OK	
VM1	Time Synchronization	False	OK	
VM1	VSS	False	ok	

You discover that when you back up Server1, VM1 temporarily pauses.

You need to ensure that you can back up Server1 without causing downtime on VM1.

What should you do?

- A. Increase the memory on VM1
- B. Connect the hard disk drive of VM1 to an SCSI controller
- C. Update the virtual machine version of VM1
- D. Upgrade VM1 to Windows Server 2016
- E. Enable the VSS integration service on VM1

Correct Answer: E Section: (none) Explanation

Explanation/Reference:

QUESTION 151

You have a server named Server1 that runs Windows Server 2016. The Docker daemon runs on Server1. You need to configure the Docker daemon to accept connections only on TCP port 64500.

What should you do?

- A. Modify the routing table on Server1
- B. Run the Set-Service Windows PowerShell cmdlet
- C. Edit the configuration ison file
- D. Run the sc config command

Correct Answer: D Section: (none) **Explanation**

Explanation/Reference:

Explanation:

CEplus The preferred method for configuring the Docker Engine on Windows is using a configuration file. The configuration file can be found at 'C:\ProgramData\Docker \config\daemon.json'. If this file does not already exist, it can be created.

The Docker Engine can also be configured by modifying the Docker service using the sc config command.

QUESTION 152

You have a server named Server1 that runs Windows Server 2016. Server1 contains a volume named D. Volume D contains the folders shown in the following table.

Name Size		Description	
Folder1	200 GB	Contains Microsoft Word documents and PowerPoint presentations that are encrypted by using EFS	
Folder2	200 GB	Contains several VHDX files that contain installations of Windows 10	
Folder3	200 GB	Contains uncompressed BMP images	
Folder4 200 GB		Application source files for different versions of Microsoft Office	

You enable Data Deduplication.

Which folder will benefit the least from Data Deduplication?

A. Folder2

B. Folder3

C. Folder1

D. Folder4

Correct Answer: C Section: (none) Explanation

Explanation/Reference:

References:

https://docs.microsoft.com/en-us/windows-server/storage/data-deduplication/overview

QUESTION 153

You have a Hyper-V cluster that uses Cluster Shared Volumes (CSV). The cluster contains 20 virtual machines. Each virtual machine has a single disk.

You create a storage QoS policy that sets the minimum IOPS to 100 and the maximum IOPS to 200.

You need to ensure that the storage traffic of each virtual machine complies with the storage QoS policy.

What should you run?

- A. Set-VMHardDiskDrive
- B. Set-VM

C. Set-VMHost

D. Set-VHD

Correct Answer: A Section: (none) Explanation

QUESTION 154

You have a five-node failover cluster named Cluster1. All the nodes run Windows Server 2012 R2. All the nodes run on physical hardware.

You need to upgrade Cluster1 to Windows Server 2016. The solution must minimize administrative effort and costs.

What should you do first?

- A. Add a Windows Server 2016 node to Cluster1
- B. Create a new Windows Server 2016 failover cluster
- C. Enable Cluster-Aware updating (CAU) on Cluster1
- D. Drain and evict a node from Cluster1

Correct Answer: D Section: (none) Explanation

QUESTION 155

DRAG DROP

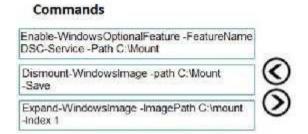

You have a WIM file named Image.wim in a folder named C:\Images. The image contains a custom image of Windows Server 2016.

You need to update the image to include the PowerShell Desired State Configuration (DSC) feature.

Which three commands should you run in sequence? To answer, move the appropriate commands from the list of commands to the answer area and arrange them in the correct order.

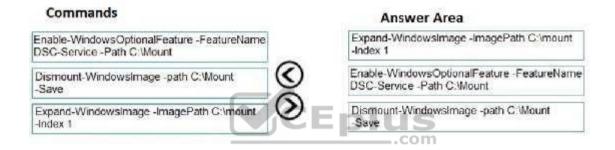

Select and Place:

Answer Area

Correct Answer:

Section: (none) Explanation

QUESTION 156

You have a Hyper-V host named Server1 that hosts a virtual machine named VM1. VM1 runs Windows Server 2016 and is configured as shown in the following table.

Setting	Value
Generation	1
Configuration version	8.0
Dynamic Memory	Enabled
Integration Services	Disabled

You need to ensure that you can manually increase and decrease the amount of memory allocated to VM1 while VM1 is running.

What should you do?

A. Disable Dynamic Memory

B. Enable Integration Services

C. Upgrade the configuration version

Correct Answer: A Section: (none) Explanation
