**Installation, Storage, and Compute with Windows Server 2016**

**Exam A**

**QUESTION 1**

**Note:** This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

<https://vceplus.com/>

**After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.**

Your network contains an Active Directory forest.

You install Windows Server 2016 on 10 virtual machines.

You need to deploy the Web Server (IIS) server role identically to the virtual machines.

Solution: From a Group Policy object (GPO), you create an application control policy, and then you apply the policy to the virtual machines.

Does this meet the goal?

- A. Yes
- B. No

**Correct Answer: B**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

Explanation:

## **QUESTION 2**

**Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.**

**After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.**

Your network contains an Active Directory forest.

You install Windows Server 2016 on 10 virtual machines.

You need to deploy the Web Server (IIS) server role identically to the virtual machines.

Solution: You create a software installation package, and then you publish the package to the virtual machines by using a Group Policy object (GPO).

<https://vceplus.com/>

Does this meet the goal?

- A. Yes
- B. No

**Correct Answer:** B

**Section:** (none)

**Explanation**

#### QUESTION 4

**Note:** This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

**After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.**

You have a server named Server1 that runs Windows Server 2016.

Server1 hosts a line-of-business application named App1. App1 has a memory leak that occasionally causes the application to consume an excessive amount of memory.

You need to log an event in the Application event log whenever App1 consumes more than 4 GB of memory.

Solution: You create a performance counter alert data collector.

Does this meet the goal?

A. Yes

B. No

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

#### QUESTION 5

**Note:** This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

**After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.**

You have a server named Server1 that runs Windows Server 2016.

Server1 hosts a line-of-business application named App1. App1 has a memory leak that occasionally causes the application to consume an excessive amount of memory.

You need to log an event in the Application event log whenever App1 consumes more than 4 GB of memory.

Solution: You create a system configuration information data collector.

Does this meet the goal?

- A. Yes
- B. No

**Correct Answer: B**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

Explanation:

#### **QUESTION 6**

You have a Hyper-V host named Server1 that runs Windows Server 2016.

Server1 has a virtual machine named VM1. VM1 is configured to run the Docker daemon.

On VM1, you have a container network that uses transparent mode.

You need to ensure that containers that run on VM1 can obtain IP addresses from DHCP.

What should you do?

- A. On VM1, run **Get-VMNetworkAdapter-VMName VM1 | Set-VMNetworkAdapter -MacAddressSpoofing On**.
- B. On VM1, run **docker network connect**.
- C. On Server1, run **docker network connect**.
- D. On Server1, run **Get-VMNetworkAdapter -VMName VM1 | Set-VMNetworkAdapter -MacAddressSpoofing On**.

**Correct Answer: D**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

Explanation:

To use DHCP for IP assignment on a virtual container host enable MACAddressSpoofing

If the container host is virtualized, and you wish to use DHCP for IP assignment, you must enable MACAddressSpoofing on the virtual machine's network adapter. Otherwise, the Hyper-V host will block network traffic from the containers in the VM with multiple MAC addresses.

You can enable MACAddressSpoofing with this PowerShell command:

```
PS C:\> Get-VMNetworkAdapter -VMName ContainerHostVM | Set-VMNetworkAdapter -MacAddressSpoofing On
```

References: <https://docs.microsoft.com/en-us/virtualization/windowscontainers/container-networking/advanced>

**QUESTION 7**

DRAG DROP

You have a server named Server1 that runs Windows Server 2016.

You plan to deploy Internet Information Services (IIS) in a Windows container.

You need to prepare Server1 for the planned deployment.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Select and Place:**

Actions	Answer Area	
Install the Hyper-V server role.	<div data-bbox="1077 1155 1144 1219">⏪</div> <div data-bbox="1077 1235 1144 1299">⏩</div>	<div data-bbox="1630 1155 1697 1219">⏴</div> <div data-bbox="1630 1235 1697 1299">⏵</div>
Install the Base Container Images.		
Install the Container feature.		
Install Docker		
Install the Web Server role.		

**Correct Answer:**

<https://vceplus.com/>

Actions	Answer Area
Install the Hyper-V server role.	Install the Container feature.
	Install Docker.
	Install the Base Container Images.
Install the Web Server role.

### QUESTION 8

You have a server that runs Windows Server 2016.

The server contains a storage pool named Pool1. Pool1 contains five physical disks named Disk1, Disk2, Disk3, Disk4, and Disk5.

A virtual disk named VirtualDisk1 is stored in Pool1. VirtualDisk1 uses the parity storage layout.

Disk3 fails.

You need to remove Disk3 from Pool1.

Which two commands should you run? Each correct answer presents part of the solution.

- A. **Update-StoragePool –FriendlyName Pool1**
- B. **Set-ResiliencySetting –StoragePool Pool1 –PhysicalDiskRedundancyDefault 4**
- C. **Reset-PhysicalDisk –FriendlyName Disk3**
- D. **Set-PhysicalDisk –FriendlyName Disk3 –Usage Retired**
- E. **Remove-PhysicalDisk –FriendlyName Disk3**

<https://vceplus.com/>

**Correct Answer:** DE

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

### QUESTION 9

You have an Active Directory domain named Contoso.com. The domain contains servers named Server1, Server2 and Server3 that run Windows Server 2016.

Server1 and Server 2 are nodes in a Hyper-V cluster named Cluster1. You add a Hyper-V Replica Broker role named Broker1 to Cluster1.

Server3 is Hyper-V server. A virtual machine VM1 runs on Server3.

Live Migration is enabled on all three servers and it is configured to use Kerberos authentication only.

You need to ensure that you can perform the migration of VM1 to Server2.

What should you do?

- A. Modify the **Storage Migration** settings on Server3.
- B. Modify the **Cluster** permissions for Cluster1.
- C. Add the Server3 computer account to the **Replicator** group on Server1 and Server2.
- D. Modify the **Delegation** settings of the Server3 computer account.

**Correct Answer:** D

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

If you have decided to use Kerberos to authenticate live migration traffic, configure constrained delegation. This involves modifying the Delegation settings of the source server, which is Server3 in this instance.

References: [https://technet.microsoft.com/en-us/library/jj134199\(v=ws.11\).aspx#BKMK\\_Step1](https://technet.microsoft.com/en-us/library/jj134199(v=ws.11).aspx#BKMK_Step1) **QUESTION 10**

You have a Windows Server 2016 Hyper-V failover cluster that contains two nodes named Node1 and Node2.

On Node1, you create a virtual machine named VM01 by using Hyper-V Manager.

You need to configure VM01 to move to Node2 automatically if Node1 becomes unavailable.

<https://vceplus.com/>

What should you do?

- A. From **Failover Cluster Manager**, run **Configure Role** actions.
- B. From **Hyper-V Manager**, click **VM01**, and click **Enable Replication**.
- C. From **Hyper-V Manager**, click **Node1**, and then modify the Hyper-V settings.
- D. From **Windows PowerShell**, run the **Enable-VMReplicationcmdlet**.

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

If you have VMs on cluster nodes that are not currently cluster resources, it's a simple process to make them highly available, provided they're using cluster storage (such as a Cluster Shared Volume):

1. Start Failover Cluster Manager.
2. Expand the cluster Roles.
3. Select the Configure Role... action.
4. Click Next to the introduction wizard.
5. In the Select Role dialog box, select Virtual Machine as the type and click Next.
6. Select all the virtual machines you want to make highly available and click Next.
7. Click Next to the confirmation.
8. Click Finish to the report, which should show Success for all. If there are Warnings, check and resolve problems if needed

#### **QUESTION 11**

Your network contains three Hyper-V hosts. You add all of the hosts to a cluster.

You need to create highly available storage spaces that connect to directly attached storage on the hosts.

Which cmdlet should you use?

- A. **Add-ClusterDisk**
- B. **Enable-ClusterStorageSpacesDirect**
- C. **Update-ClusterVirtualMachineConfiguration**
- D. **Set-StoragePool**

<https://vceplus.com/>

**Correct Answer:** B

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

### QUESTION 12

You have four servers named Server1, Server2, Server3, and Server4 that run Windows Server 2016. Each server has a single 4-TB SATA hard disk.

To each server you attach a new 4-TB SATA hard disk.

You need to create a new storage cluster that uses Storage Spaces Direct. The storage pool must contain all of the new disks.

Which command should you run before you enable Storage Space Direct?

- A. **Add-ClusterSharedVolume -Name "Disk 1" -Cluster Cluster1**
- B. **New-Cluster -Name Cluster1 -Node 'Server1', 'Server2', 'Server3', 'Server4' -NoStorage**
- C. **Get-ClusterAvailableDisk -Cluster Cluster1 | Add-ClusterDisk**
- D. **New-ClusterStorageEnclosure -id 1 -name Cluster1 -type jbod -ConnectionString "Server1,Server2,Server3,Server4"**

**Correct Answer:** B

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

### QUESTION 13

**Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.**

Your network contains an Active Directory domain named contoso.com. The functional level of the forest and the domain is Windows Server 2008 R2. All servers in the domain run Windows Server 2016 Standard. The domain contains 300 client computers that run either Windows 8.1 or Windows 10.

The domain contains nine servers that are configured as shown in the following table.

Name	Configuration	Planned changes
Server1	Domain controller	<i>None</i>
Server2	File server	Run Failover Clustering and Storage Spaces Direct
Server3	File server	Run Failover Clustering and Storage Spaces Direct
Server4	Hyper-V host	Run shielded virtual machines
Server5	Hyper-V host	<i>None</i>
Server6	Member server	Run Active Directory Federation Services (AD FS)
VM1	Virtual machine hosted on Server5	<i>None</i>
VM2	Virtual machine hosted on Server5	<i>None</i>
VM3	Virtual machine hosted on Server5	<i>None</i>

The virtual machines are configured as follows:

- Each virtual machine has one virtual network adapter.
- VM1 and VM2 are part of a Network Load Balancing (NLB) cluster.
- All of the servers on the network can communicate with all of the virtual machines.

On Server4, you plan to provision a new volume that will be used to create large, fixed-size VHDX files.

Which type of file system should you use for the new volume to minimize the amount of time required to create the VHDX files?

- A. ReFS
- B. NTFS
- C. CSVFS
- D. exFAT

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

**QUESTION 14**

<https://vceplus.com/>

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Your network contains an Active Directory domain named contoso.com. The functional level of the forest and the domain is Windows Server 2008 R2. All servers in the domain run Windows Server 2016 Standard. The domain contains 300 client computers that run either Windows 8.1 or Windows 10.

The domain contains nine servers that are configured as shown in the following table.

Name	Configuration	Planned changes
Server1	Domain controller	None
Server2	File server	Run Failover Clustering and Storage Spaces Direct
Server3	File server	Run Failover Clustering and Storage Spaces Direct
Server4	Hyper-V host	Run shielded virtual machines
Server5	Hyper-V host	None
Server6	Member server	Run Active Directory Federation Services (AD FS)
VM1	Virtual machine hosted on Server5	None
VM2	Virtual machine hosted on Server5	None
VM3	Virtual machine hosted on Server5	None

The virtual machines are configured as follows:

- Each virtual machine has one virtual network adapter.
- VM1 and VM2 are part of a Network Load Balancing (NLB) cluster.
- All of the servers on the network can communicate with all of the virtual machines.

You need to minimize the likelihood that a virtual machine running malicious code will consume excessive resources on Server5.

What should you do?

- A. Configure the virtual machines as shielded virtual machines.
- B. Run the **Set-VMProcessor** cmdlet and specify the **EnableHostResourceProtection** parameter.
- C. Run the **Set-VMProcessor** cmdlet and specify the **MaximumCountPerNumaNode** parameter.
- D. Configure **VM Network Adapter Isolation**.

**Correct Answer: B**

#### QUESTION 15

**Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.**

You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 has a dynamically expanding virtual hard disk (VHD) file that is 900 GB. The VHD contains 400 GB of free space.

You need to reduce the amount of disk space used by the VHD.

What should you run?

- A. the **Mount-VHD** cmdlet
- B. the **Diskpart** command
- C. the **Set-VHD** cmdlet
- D. the **Set-VM** cmdlet
- E. the **Set-VMHost** cmdlet
- F. the **Set-VMProcessor** cmdlet
- G. the **Install-WindowsFeature** cmdlet
- H. the **Optimize-VHD** cmdlet

**Correct Answer: H**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

#### QUESTION 16

**Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.**

You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 contains a virtual machine named VM1.

<https://vceplus.com/>

You need to ensure that you can use nested virtualization on VM1.

What should you run on Server1?

- A. the **Mount-VHD** cmdlet
- B. the **Diskpart** command
- C. the **Set-VHD** cmdlet
- D. the **Set-VM** cmdlet
- E. the **Set-VMHost** cmdlet
- F. the **Set-VMProcessor** cmdlet
- G. the **Install-WindowsFeature** cmdlet
- H. the **Optimize-VHD** cmdlet

**Correct Answer:** F

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

#### QUESTION 17

**Note:** This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.

You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 has a virtual machine named VM1 that uses a single VHDX file. VM1 is configured as shown in the following table.

Configuration	Details
Virtual machine generation	V2
Operating system	Windows 8
File system	NTFS
Number of partitions	1
Disk type	Basic
Unallocated disk space	100 GB

You plan to use VM1 as a virtual Machine Template to deploy shielded virtual machines.

You need to ensure that VM1 can be used to deploy shielded virtual machines.

What should you run?

- A. the **Mount-VHD** cmdlet
- B. the **Diskpart** command
- C. the **Set-VHD** cmdlet
- D. the **Set-VM** cmdlet
- E. the **Set-VMHost** cmdlet
- F. the **Set-VMProcessor** cmdlet
- G. the **Install-WindowsFeature** cmdlet
- H. the **Optimize-VHD** cmdlet

**Correct Answer:** B

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

The VHDX requires two partitions.

#### QUESTION 18

**Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.**

A company named Contoso, Ltd. has several servers that run Windows Server 2016. Contoso has a Hyper-V environment that uses failover clustering and Windows Server Update Services (WSUS). The environment contains several Windows containers and several virtual machines.

The WSUS deployment contains one upstream server that is located on the company's perimeter network and several downstream servers located on the internal network. A firewall separates the upstream server from the downstream servers.

You plan to deploy a human resources application to a new server named HRServer5. HRServer5 contains a FAT32-formatted data volume.

The CIO of Contoso identifies the following requirements for the company's IT department:

- Deploy a failover cluster to two new virtual machines.
- Store all application databases by using Encrypted File System (EFS).
- Ensure that each Windows container has a dedicated IP address assigned by a DHCP server.

<https://vceplus.com/>

- Produce a report that lists the processor time used by all of the processes on a server named Server1 for five hours.
- Encrypt all communication between the internal network and the perimeter network, including all WSUS communications.
- Automatically load balance the virtual machines hosted in the Hyper-V cluster when processor utilization exceeds 70 percent.

You need to modify the Hyper-V cluster to meet the load balancing requirement for the virtual machine.

Which command should you run?

- A. **(Get-ClusterParameter).AutoBalancerMode=2**
- B. **(Get-Cluster).AutoBalancerMode=2**
- C. **(Get-ClusterParameter).AutoBalancerLevel=2**
- D. **(Get-Cluster).AutoBalancerLevel=2**

**Correct Answer:** D

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

#### **QUESTION 22**

You have a server named Server1 that runs Windows Server 2016.

The Windows Server 2016 installation media is mounted as drive D.

You copy the NanoServerImageGenerator folder from the D:\NanoServer folder to the C:\NanoServer folder.

You need to create a custom Nano Server image that includes the Hyper-V server role. The image will be used to deploy Nano Servers to physical servers.

Which two commands should you run? Each correct answer presents part of the solution.

- A. **New-NanoServerImage –Edition Standard –DeploymentType Guest –MediaPath D:\ -TargetPath .\NanoServerImage\NanoServer.wim –Compute**
- B. **Install-PackageProvider NanoServerPackage**
- C. **Import-PackageProvider NanoServerPackage**
- D. **New-NanoServerImage –Edition Standard –DeploymentType Host –MediaPath D:\ -TargetPath .\NanoServerImage\NanoServer.wim –Compute**
- E. **Import-Module C:\NanoServer\NanoServerImageGenerator**

**Correct Answer:** DE

### QUESTION 27

You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 has two virtual machines named VM1 and VM2.

You discover that VM1 and VM2 can communicate with Server1 over the network.

You need to ensure that VM1 and VM2 can communicate with each other only. The solution must prevent VM1 and VM2 from communicating with Server1.

Which cmdlet should you use?

- A. **Set-VMSwitch**
- B. **Enable-VMSwitchExtension**
- C. **Set-NetNeighbor**
- D. **Remove-VMSwitchTeamMember**

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

### QUESTION 28

You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 contains four virtual machines that are configured as shown in the following table.

Virtual machine name	Configuration
VM1	A shielded virtual machine that runs Windows Server 2012 R2
VM2	A shielded virtual machine that runs Windows Server 2016
VM3	A virtual machine that runs Windows Server 2012 R2 and has Secure Boot enabled
VM4	A virtual machine that runs Windows Server 2016 and has all of its drivers protected by using BitLocker Drive Encryption (BitLocker)

<https://vceplus.com/>

To which virtual machine or machines can you connect by using Virtual Machine Connection from Hyper-V Manager?

- A. VM1, VM2, VM3, and VM4
- B. VM4 only
- C. VM1 and VM2 only
- D. VM3 and VM4 only
- E. VM2 only

**Correct Answer:** D

**Section:** (none)

#### QUESTION 29

Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.

You have a two-node Hyper-V cluster named Cluster1 at a primary location and a stand-alone Hyper-V host named Server1 at a secondary location.

A virtual machine named VM1 runs on Cluster1.

You configure a Hyper-V Replica of VM1 to Server1.

You need to perform a Test Failover of VM1.

Which tool should you use?

- A. the **clussvc.exe** command
- B. the **cluster.exe** command
- C. the Computer Management snap-in
- D. the **configurehyperv.exe** command
- E. the Disk Management snap-in
- F. the Failover Cluster Manager snap-in
- G. the Hyper-V Manager snap-in
- H. the **Server Manager** app

**Correct Answer:** G

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

**QUESTION 30**

**Note:** This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.

You have three servers named Server1, Server2, and Server3 that run Windows Server 2016.

The servers are configured only with the components listed in the table below:

Server name	Components installed
Server1	Hyper-V server role
Server2	Hyper-V server role
Server3	iSCSI Target Server role service

You need to create a Hyper-V cluster.

Which tool should you use first?

- A. the **clussvc.exe** command
- B. the **cluster.exe** command
- C. the Computer Management snap-in
- D. the **configurehyperv.exe** command
- E. the Disk Management snap-in
- F. the Failover Cluster Manager snap-in
- G. the Hyper-V Manager snap-in
- H. the Server Manager app

**Correct Answer:** H

### QUESTION 33

**Note:** In this section, you'll see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem.

Once you answer a question in this section, you will NOT be able to return to it. As a result these questions will not appear in the review screen.

**Note:** This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

Your network contains an Active Directory forest named contoso.com. The forest contains a member server named Server1 that runs Windows Server 2016. All domain controllers run Windows Server 2012 R2. Contoso.com has the following configuration:

```
PS C:\> (Get-ADForest). ForestMode Windows2008R2Forest
PS C:\> (Get-ADDomain). DomainMode Windows2008R2Domain
PS C:\>
```

You plan to deploy an Active Directory Federation Services (AD FS) farm on Server1 and to configure device registration. You need to configure Active Directory to support the planned deployment.

Solution: You raise the domain functional level to Windows Server 2012 R2.

Does this meet the goal?

- A. Yes
- B. No

**Correct Answer:** B

Section: (none)

### QUESTION 34

You are configuring a Windows Server 2016 failover cluster in a workgroup. Before installing one of the nodes, you run the ipconfig /all command and receive the following output:

```
Windows IP Configuration
```

```
Host Name..... : Server1
Primary DNS Suffix..... :
Node Type..... : Hybrid
IP Routing Enabled..... : No
WINS Proxy Enabled..... : No
DNS Suffix Search List..... :
```

```
Ethernet adapter Ethernet:
```

```
Connection-specific DNS Suffix.. :
Description..... : Microsoft Hyper-V Network Adapter
Physical Address..... : 00-15-SD-01-62-17
DHCP Enabled..... : Yes
Autoconfiguration Enabled..... : Yes
Link-local IPv6 Address..... : fe80::7548:46d8:8ffc:d5ab%17 (Preferred)
IPv4 Address..... : 192.168.1.154 (Preferred)
Subnet Mask..... : 255.255.255.0
Default Gateway..... : 192.168.1.10
DHCPv6 IAID..... : 369099429
DHCPv6 Client DUID..... : 00-01-00-01-1A-1D-5D-60-00-02-A5-4E-F4-85
DNS Servers..... : 192.168.1.32
NetBIOS over TCP/IP..... : Disabled
```

You need to ensure that Server1 can be added as a node in the cluster. What should you do?

- A. Assign a static IP address
- B. Change the **Node Type** to **Broadcast**
- C. Configure a DNS suffix
- D. Enable **NetBIOS over TCP/IP**

**Correct Answer:** C

### QUESTION 38

You have a server named Server1 that runs Windows Server 2016. You install the Docker daemon on Server1. You need to configure the Docker daemon to accept connections only on TCP port 64500.

What should you do?

- A. Run the `New-NetFirewallRule` cmdlet

<https://vceplus.com/>

- B. Run the `Set-Service Windows PowerShell` cmdlet
- C. Edit the `daemon.json` file
- D. Edit the configuration json file
- E. Modify the routing table on Server1
- F. Run the `sc control` command
  
- G. Run the `Set-NetFirewallPortFilter` cmdlet

**Correct Answer: C**  
**Section: (none)**  
**Explanation**

**Explanation/Reference:**

Explanation:

The preferred method for configuring the Docker Engine on Windows is using a configuration file. The configuration file can be found at 'C:\ProgramData\Docker\config\daemon.json'. If this file does not already exist, it can be created.

Note: The Docker Engine can also be configured by modifying the Docker service using the `sc config` command.

**QUESTION 39**

**Note: This question is part of a series of questions that use the same similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.**

You have two servers named Server1 and Server2 that run Windows Server 2016. Server1 and Server2 have the Hyper-V server role installed. An iSCSI SAN connects to the network.

You create a LUN on the SAN and configure both servers to connect to the iSCSI target. You create a failover cluster and add Server1 and Server2 to the cluster.

You connect both servers to the iSCSI target and format the shared storage. You need to add the shared storage to the cluster. The solution must ensure that virtual machines running on both nodes can access the shared storage simultaneously.

Which tool should you use?

- A. the `clussvc.exe` command
- B. the `cluster.exe` command

- C. the Computer Management snap-in
- D. the **configurehyperv.exe** command
- E. the Disk Management snap-in
- F. the Failover Cluster Manager snap-in
- G. the Hyper-V Manager snap-in
  
- H. the **Server Manager** app

#### QUESTION 42

Note: In this section, you'll see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem.

Once you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

Your network contains an Active Directory domain named contoso.com. The domain contains a DNS server named Server1. All client computers run Windows 10. On Server1, you have the following zone configuration:

ZoneName	ZoneType	IsAutoCreated	IsDsIntegrated	IsReverseLookupZone	IsSign
_msdcs.contoso.com	Primary	False	True	False	False
adatum.com	Forwarder	False	False	False	False
contoso.com	Primary	False	True	False	False
fabrikam.com	Primary	False	False	False	True
TrustAnchors	Primary	False	True	False	False

You have the following subnets defined on Server1.

Name	IPv4Subnet	IPv6Subnet
Subnet1	(10.0.0.0/24)	
Subnet2	(10.0.1.0/24)	
Subnet3	(192.168.15.0/24)	
Subnet4	(172.16.1.0/24)	

You need to prevent Server1 from resolving queries from DNS clients located on Subnet4. Server1 must resolve queries from all other DNS clients.

Solution: From Windows PowerShell on Server1, you run the **Export-DnsServerDnsSecPublicKey** cmdlet.

Does this meet the goal?

<https://vceplus.com/>

- A. Yes
- B. No

**Correct Answer:** B

Once you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

Your network contains an Active Directory domain named contoso.com. The domain contains a DNS server named Server1. All client computers run Windows 10. On Server1, you have the following zone configuration:

ZoneName	ZoneType	IsAutoCreated	IsDsIntegrated	IsReverseLookupZone	IsSign
_msdcs.contoso.com	Primary	False	True	False	False
adatum.com	Forwarder	False	False	False	False
contoso.com	Primary	False	True	False	False
fabrikam.com	Primary	False	False	False	True
TrustAnchors	Primary	False	True	False	False

You have the following subnets defined on Server1.

Name	IPv4Subnet	IPv6Subnet
Subnet1	(10.0.0.0/24)	
Subnet2	(10.0.1.0/24)	
Subnet3	(192.168.15.0/24)	
Subnet4	(172.16.1.0/24)	

You need to prevent Server1 from resolving queries from DNS clients located on Subnet4. Server1 must resolve queries from all other DNS clients.

<https://vceplus.com/>

Solution: From the Security setting of each zone on Server1, you modify the permissions.

Does this meet the goal?

- A. Yes
- B. No

**Correct Answer:** B

**Section:** (none)

#### QUESTION 57

You have a server named Server1 that runs Windows Server 2016. The Docker daemon runs on Server1.

You need to ensure that members of a security group named Docker Administrators can administer Docker.

What should you do?

- A. Run the **Set-Service** cmdlet.
- B. Modify the Security settings of **Dockerd.exe**.
- C. Edit the Configuration.json file.
- D. Run the **sc config** command.
- E. Run the **sc privs** command.
- F. Add Docker Administrators to the local Administrators group

**Correct Answer:** D

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

The preferred method for configuring the Docker Engine on Windows is using a configuration file. The configuration file can be found at 'C:\ProgramData\Docker\config\daemon.json'. If this file does not already exist, it can be created.

The Docker Engine can also be configured by modifying the Docker service using the **sc config** command.

### QUESTION 58

Note: In this section, you'll see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem.

Once you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

Your network contains an Active Directory domain named contoso.com. The domain contains a DNS server named Server1. All client computers run Windows 10. On Server1, you have the following zone configuration:

ZoneName	ZoneType	IsAutoCreated	IsDnsIntegrated	IsReverseLookupZone	IsSign
_msdcs.contoso.com	Primary	False	True	False	False
adatum.com	Forwarder	False	False	False	False
contoso.com	Primary	False	True	False	False
fabrikam.com	Primary	False	False	False	True
TrustAnchors	Primary	False	True	False	False

You have the following subnets defined on Server1.

Name	IPv4Subnet	IPv6Subnet
Subnet1	(10.0.0.0/24)	
Subnet2	(10.0.1.0/24)	
Subnet3	(192.168.15.0/24)	
Subnet4	(172.16.1.0/24)	

You need to prevent Server1 from resolving queries from DNS clients located on Subnet4. Server1 must resolve queries from all other DNS clients.

Solution: From Windows Firewall with Advanced Security on Server1, you create an inbound rule.

Does this meet the goal?

- A. Yes
- B. No

**Correct Answer:** A

**Section:** (none)

Explanation:

**QUESTION 59**

You need to modify the GPO prefix by IPAM. What should you do?

- A. Run the **Set-IpamConfiguration** cmdlet
- B. Click **Provision the IPAM server** in **Server Manager**
- C. Click **Configure server discovery** in **Server Manager**
- D. Run the **Invoke-IpamGpoProvisioning** cmdlet

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

**QUESTION 60**

You have a server named Server1 that runs Windows Server 2016. Server1 is a Hyper-V host that hosts a virtual machine named VM1. Server1 has three network adapter cards. That connect to a virtual switch named vSwitch1. You configure NIC Teaming on VM1 as shown in the exhibit:

### NIC Teaming

New team

Team name:

Member adapters:

In Team	Adapter	Speed	State	Reason
<input type="checkbox"/>	Ethernet	1 Gbps		
<input checked="" type="checkbox"/>	Ethernet 2	1 Gbps		
<input checked="" type="checkbox"/>	Ethernet 3	1 Gbps		

^ Additional properties

Teaming mode:

Load balancing mode:

Standby adapter:

Primary team interface: Converged NIC Team, Default VLAN

You need to ensure that VM1 will retain access to the network if a physical adapter card fails on Server1. What should you do?

- A. From **Hyper-V Manager** on Server1, modify the settings of VM1.
- B. From **Windows PowerShell** on Server1, run the **Set-VmSwitch** cmdlet.
- C. From the properties of the NIC team on VM1, add the adapter named Ethernet to the NIC team.
- D. From the properties of the NIC team on VM1, change the load balancing of the NIC team.

**Correct Answer:** A

#### QUESTION 61

Note: This question is part of a series of questions that use the same similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.

You have an Active Directory domain that contains two Hyper-V servers named Server1 and Server2. Server1 has Windows Server 2016 installed. Server2 has Windows Server 2012 R2 installed. Each Hyper-V server has three network cards. Each network card is connected to a different subnet. Server1 contains a dedicated migration network. Server2 contains a virtual machine named VM5.

You plan to perform a live migration of VM5 to Server1. You need to ensure that Server1 uses all available networks to perform the live migration of VM5.

What should you run?

- A. the **Mount-VHD** cmdlet
- B. the **Diskpart** command
- C. the **Set-VHD** cmdlet
- D. the **Set-VM** cmdlet
- E. the **Set-VMHost** cmdlet
- F. the **Set-VMProcessor** cmdlet
- G. the **Install-WindowsFeature** cmdlet
- H. the **Optimize-VHD** cmdlet

**Correct Answer:** E

**Section:** (none)

Explanation:

**QUESTION 62**

DRAG DROP

You have a physical server named Server1 that runs Windows Server 2016.

Server1 is a Hyper-V host. On Server1, you create a virtual machine named VM1 that runs Windows Server 2016.

You plan to install the Hyper-V server role on VM1. You need to ensure that you can configure VM1 to host virtual machines.

How should you complete the Windows PowerShell script? To answer, drag the appropriate values to the correct targets. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

**Select and Place:**

Values	Answer Area
<input type="text" value="Sfalse"/>	Set-VMProcessor -VMName VM1 -ExposeVirtualizationExtensions <input type="text"/> Count 2
<input type="text" value="Snull"/>	Set-VMMemory VM1 -DynamicMemoryEnabled <input type="text"/>
<input type="text" value="Strue"/>	Get-VMNetworkAdapter -VMName VM1   Set-VMNetworkAdapter -MacAddressSpoofing on

**Correct Answer:**

Values	Answer Area
<input type="text"/>	Set-VMProcessor -VMName VM1 -ExposeVirtualizationExtensions <input type="text" value="Strue"/> Count 2
<input type="text" value="Snull"/>	Set-VMMemory VM1 -DynamicMemoryEnabled <input type="text" value="Sfalse"/>

**QUESTION 63**

**Note:** This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

**After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.**

You have a server named Server1 that runs Windows Server 2016.

You plan to use Windows Server Backup to back up all of the data on Server1.

You create a new volume on Server1.

You need to ensure that the new volume can be used as a backup target.

The backup target must support incremental backups.

Solution: You assign a drive letter to the volume, and you format the volume by using ReFS.

Does this meet the goal?

- A. Yes
- B. No

**Correct Answer:** B

**Section:** (none)

**Explanation**

**QUESTION 70**

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Your network contains an Active Directory domain named contoso.com. The functional level of the forest and the domain is Windows Server 2008 R2. All servers in the domain run Windows Server 2016 Standard. The domain contains 300 client computers that run either Windows 8.1 or Windows 10.

The domain contains nine servers that are configured as shown in the following table.

Name	Configuration	Planned changes
Server1	Domain controller	None
Server2	File server	Run Failover Clustering and Storage Spaces Direct
Server3	File server	Run Failover Clustering and Storage Spaces Direct
Server4	Hyper-V host	Run shielded virtual machines
Server5	Hyper-V host	None
Server6	Member server	Run Active Directory Federation Services (AD FS)
VM1	Virtual machine hosted on Server5	None
VM2	Virtual machine hosted on Server5	None
VM3	Virtual machine hosted on Server5	None

The virtual machines are configured as follows:

- Each virtual machine has one virtual network adapter.
- VM1 and VM2 are part of a Network Load Balancing (NLB) cluster.
- All of the servers on the network can communicate with all of the virtual machines.

You plan to implement nested virtual machines on VM1.

Which two features will you be prevented from using for VM1?

- A. NUMA spanning
- B. live migration
- C. Dynamic Memory
- D. Smart Paging

**Correct Answer:** BC

#### QUESTION 71

**Note:** This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Your network contains an Active Directory domain named contoso.com. The functional level of the forest and the domain is Windows Server 2008 R2. All servers in the domain run Windows Server 2016 Standard. The domain contains 300 client computers that run either Windows 8.1 or Windows 10.

The domain contains nine servers that are configured as shown in the following table.

Name	Configuration	Planned changes
Server1	Domain controller	<i>None</i>
Server2	File server	Run Failover Clustering and Storage Spaces Direct
Server3	File server	Run Failover Clustering and Storage Spaces Direct
Server4	Hyper-V host	Run shielded virtual machines
Server5	Hyper-V host	<i>None</i>
Server6	Member server	Run Active Directory Federation Services (AD FS)
VM1	Virtual machine hosted on Server5	<i>None</i>
VM2	Virtual machine hosted on Server5	<i>None</i>
VM3	Virtual machine hosted on Server5	<i>None</i>

The virtual machines are configured as follows:

- Each virtual machine has one virtual network adapter.
- VM1 and VM2 are part of a Network Load Balancing (NLB) cluster.
- All of the servers on the network can communicate with all of the virtual machines.

You create a new NLB cluster that contains VM3.

You need to ensure that VM2 can remain in the original cluster and be added to the new cluster.

What should you do first?

- A. Add a new virtual network adapter to VM2.
- B. Install the Web Application Proxy server role on VM2 and VM3.
- C. Modify the default port rule.
- D. Change the cluster operation mode.

**Correct Answer:** A

### QUESTION 73

You have a server named Server1 that runs Windows Server 2016. The Docker daemon runs on Server1.

You need to ensure that members of a security group named Docker Administrators can administer Docker.

What should you do?

- A. Run the **sc privsc** ommand.
- B. Edit the Daemon.json file.
- C. Add **Docker Administrators** to the local Administrators group.
- D. Edit the Configuration.json file.
- E. Modify the Security settings of **Docker.exe**.
- F. Run the **Set-Service** cmdlet.

**Correct Answer: B**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

Explanation:

The preferred method for configuring the Docker Engine on Windows is using a configuration file. The configuration file can be found at 'C:\ProgramData\Docker\config\daemon.json'. If this file does not already exist, it can be created.

Note: The Docker Engine can also be configured by modifying the Docker service using the sc config command.

**QUESTION 74**

You have a Hyper-V host that runs Windows Server 2016.

You need to identify the amount of processor resources consumed by Hyper-V and virtual machines.

Which counter should you use from Performance Monitor?

<https://vceplus.com/>

- A. \Hyper-V Hypervisor\Logical Processor
- B. \Hyper-V Hypervisor Root Virtual Processor(\_Total)\% Guest Run Time
- C. \Hyper-V Hypervisor Virtual Processor(\_Total)\% Hypervisor Run Time
- D. \Hyper-V Hypervisor Virtual Processor(\_Total)\% Total Run Time
- E. \Hyper-V Hypervisor Logical Processor(\_Total)\% Total Run Time

**Correct Answer:** E

**Section:** (none)

**Explanation**

**Explanation/Reference:**

**QUESTION 75**

You have a server named Server1 that runs Windows Server 2016.

<https://vceplus.com/>

The disks on Server1 are configured as shown in the following table.

Volume	Type	File System	Capacity
C:	Attached locally	NTFS	150 GB
D:	Attached locally	exFAT	100 GB
E:	Attached locally	NTFS	20 GB
F:	Attached locally	ReFS	1 TB
G:	iSCSI LUN	NTFS	2 TB

Windows Server 2016 is installed in C:\Windows.

On which two volumes can you enable data deduplication? Each correct answer presents a complete solution.

- A. C:
- B. D:
- C. E:D. F:
- E. G:

**Correct Answer:** CE

**Section:** (none)

## QUESTION 77

HOTSPOT

You plan to deploy three servers named Server1, Server2, and Server3 that will run Windows Server 2016. The servers will have the following disk configurations:

- Server1 will have a C: drive of 2 TB.
- Server2 will have two disks. The C: drive will be 2 TB. The D: drive will be 1TB. D: must support file system-based compression. ▪
- Server3 will have two disks. The C: drive will be 2 TB. The D: drive will be 1TB and must support file-system based quotas.

Which file system can you use for each drive? To answer, select the appropriate options in the answer area.

**Hot Area:**

## Answer Area

C: on all servers:

	▼
NTFS only	
ReFS only	
Either NTFS or ReFS	

D: on Server2:

	▼
NTFS only	
ReFS only	
Either NTFS or ReFS	

D: on Server3:

	▼
NTFS only	
ReFS only	
Either NTFS or ReFS	

Correct Answer:

## Answer Area

C: on all servers:

	▼
NTFS only	
ReFS only	
Either NTFS or ReFS	

D: on Server2:

	▼
NTFS only	
ReFS only	
Either NTFS or ReFS

om/

All of the nodes in the failover cluster have sufficient resources to run VM1 and VM2 concurrently.

VM1 and VM2 fail over to Server3.

What is the state of each virtual machine after the failover?

- A. Both VM1 and VM2 are stopped.
- B. Both VM1 and VM2 are running.
- C. VM1 is stopped and VM2 is running.
- D. VM1 is stopped and VM2 is paused.

**Correct Answer:** C

#### **QUESTION 82**

Your network contains an Active Directory domain named contoso.com. The domain contains two servers named Server1 and Server2 that run Windows Server 2016.

Each server has an operating system disk and four data disks. All of the disks are locally attached SATA disks. Each disk is a basic disk, is initialized as an MBR disk, and has a single NTFS volume.

You plan to implement Storage Spaces Direct by using the data disks on Server1 and Server2.

You need to prepare the data disks for the Storage Spaces Direct implementation.

What should you do?

- A. Format the volumes on the data disks as exFAT.
- B. Initialize the data disks as GPT disks and create an ReFS volume on each disk.
- C. Convert the data disks to dynamic disks.
- D. Delete the volumes from the data disks.

**Correct Answer:** D

**Section: (none)**

**Explanation**

**Explanation/Reference:**

Explanation:

**QUESTION 83**

Your network contains a new Active Directory domain named contoso.com.

You have a security policy that states that new servers should run Nano Server whenever possible.

Which server role can be deployed on a Nano Server?

- A. **Active Directory Certificate Services**
- B. **DHCP Server**
- C. **Remote Desktop Services**
- D. **DNSServer**

**Correct Answer: D**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

Explanation:

**QUESTION 84**

You have an Active Directory domain named contoso.com.

The computers in contoso.com are installed by using Windows Deployment Services.

You have a server named Server1 that runs Windows Server 2016 and is a member of contoso.com. Server1 has the Hyper-V role installed. Virtual machines on Server1 are connected to an external switch named Switch1.

You create a virtual machine named VM1 on Server1 by running the following cmdlets.

```
New-VM VM1
Add-VMHardDiskDrive -VMName VM1 -ControllerType IDE -Path c:\VMs\Disk1.vhd
Add-VMNetworkAdapter -VMName VM1
```

You need to ensure that you can install the operating system on VM1 by using Windows Deployment Services.

What should you do?

- A. Modify the **DefaultFlowMinimumBandwidthWeight** parameter of Switch1.
- B. Add a SCSI controller to VM1.
- C. Add a legacy network adapter to VM1.
- D. Modify the **SwitchType** parameter of Switch1.

**Correct Answer:** C

**Section:** (none)

#### QUESTION 85

**Note:** This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

**After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.**

Your network contains an Active Directory forest.

You install Windows Server 2016 on 10 virtual machines.

You need to deploy the Web Server (IIS) server role identically to the virtual machines.

Solution: From Windows System Image Manager, you create an answer file, you copy the file to C:\Sysprep on each virtual machine, and then you run the ApplyImage cmdlet.

Does this meet the goal?

- A. Yes
- B. No

**Correct Answer:** B

**Section:** (none)

**Explanation**

**Explanation/Reference:**

<https://vceplus.com/>

**QUESTION 86**

You have a server named Server1 that runs Windows Server 2016.

On Server1, you use the Basic template to create a new Data Collector Set named CollectorSet1.

You need to configure CollectorSet1 to generate performance alerts.

What should you do before you start CollectorSet1?

- A. Modify the performance counter data collector of CollectorSet1.
- B. Add a new data collector to CollectorSet1.
- C. Modify the configuration data collector of CollectorSet1.
- D. Add a new task to CollectorSet1.

**Correct Answer:** B

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

We need to add performance counter alert data collector to the set.

**QUESTION 87**

You plan to install a Nano Server on a physical server named Nano1. Nano1 will host several virtual machines that will use live migration.

Which package should you install on Nano1?

- A. **Microsoft-NanoServer-SecureStartup-Package**
- B. **Microsoft-NanoServer-ShieldedVM-Package**
- C. **Microsoft-NanoServer-Compute-Package**
- D. **Microsoft-NanoServer-FailoverCluster-Package**
- E. **Microsoft-NanoServer-Storage –Package**

**Correct Answer:** C

**Section:** (none)

**Explanation**

**Explanation/Reference:**

**QUESTION 88**

You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 hosts a virtual machine named VM1 that runs Windows Server 2016.

You install the Hyper-V server role on VM1.

You need to ensure that the virtual machines hosted on VM1 can communicate with the virtual machines hosted on Server1.

What should you do?

- A. On Server1, run the **Set-VmNetworkAdapterIsolation** cmdlet and specify the **-MultiTenantStack Off** parameter.
- B. On VM1, run the **Set-VMNetworkAdapter** cmdlet and specify the **-MacAddressSpoofing Off** parameter.
- C. On VM1, run the **Set-VmNetworkAdapterIsolation** cmdlet and specify the **-MultiTenantStack On** parameter.
- D. On Server1, run the **Set-VMNetworkAdapter** cmdlet and specify the **-MacAddressSpoofing On** parameter.

**Correct Answer:** D

**Section:** (none)

**Explanation**

**Explanation/Reference:**

**QUESTION 89**

You have two servers that run Windows Server 2016. The servers are configured as shown in the following table.

Server name	Workgroup	DNS suffix
Server1	Workgroup1	None
Server2	Workgroup2	Contoso.com

You need to create a failover cluster that contains both servers.

Which two commands should you run? Each correct answer presents part of the solution.

**NOTE:** Each correct selection is worth one point.

- A. **wmic ComputerSystem Set Workgroup= "Workgroup2"**
- B. **New-Cluster-Name Cluster1- Node Server1, Server2- AdministrativeAccessPoint DNS**

- C. **New-Cluster-Name Cluster1- Node Server1, Server2- AdministrativeAccessPoint ActiveDirectoryAndDns**
- D. **New-Cluster-Name Cluster1- Node Server1, Server2- AdministrativeAccessPoint None**
- E. **netdom computername Server1/MakePrimary:server1.contoso.com**

**Correct Answer:** AB

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### **QUESTION 90**

You have two servers named Server1 and Server 2 that run Windows Server 2016.

You plan to implement Storage Replica to replicate the contents of volumes on Server1 and Server2.

You need to ensure that the replication traffic between the servers is limited to a maximum of 100 Mbps.

Which cmdlet should you run?

- A. **Set-NetworkController**
- B. **Set-NetUDPSetting**
- C. **Set-NetQosPolicy**
- D. **Set- NetTCPSetting**

**Correct Answer:** C

**Section:** (none)

**Explanation**

### QUESTION 92

You have Hyper-V virtual machines that run 50 web servers, 10 Microsoft SQL Server servers, 10 files servers, and eight domain controllers.

You need to implement a backup strategy that meets the following requirements:

- Backs up all servers
- Centralizes backup management
- Performs application-level backups
- Provides the ability to perform bare metal recovery

What should you use?

- A. Microsoft Azure VM Backup
- B. Microsoft Azure Backup Agent
- C. Windows Server Backup
- D. Microsoft Azure Backup Server

**Correct Answer:** D

**Section:** (none)

**Explanation**

**Explanation/Reference:**

### QUESTION 93

You create a Storage Spaces Direct hyper-converged failover cluster. The cluster contains three nodes and a 1-TB Storage Spaces Direct volume.

The cluster will store virtual machines.

You plan to extend the volume by adding an additional 3 TB.

<https://vceplus.com/>

What is the minimum amount of extra disk capacity required to accommodate extending the volume?

- A. 3TB on the coordinator node
- B. 3 TB per node
- C. 4 TB per node
- D. 4 TB on the coordinator node

**Correct Answer:** B

**Section:** (none)

**Explanation**

**Explanation/Reference:**

<https://docs.microsoft.com/en-us/windows-server/storage/storage-spaces/drive-symmetry-considerations>

#### QUESTION 94

You have a Hyper-V failover cluster that contains three nodes. Virtual machines are distributed evenly across the cluster nodes.

You need to ensure that if a node loses connectivity from the other nodes, the virtual machines on the node will be transitioned to one of the remaining nodes after one minute.

Which settings should you modify?

- A. **QuaranteneDuration** and **QuarantineThreshold**
- B. **SameSubnetDelay** and **CrossSubnetDelay**
- C. **QuorumArbitrationTimeMax** and **RequestReplyTimeout**
- D. **ResiliencyPeriod** and **ResiliencyLevel**

**Correct Answer:** D

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### QUESTION 95

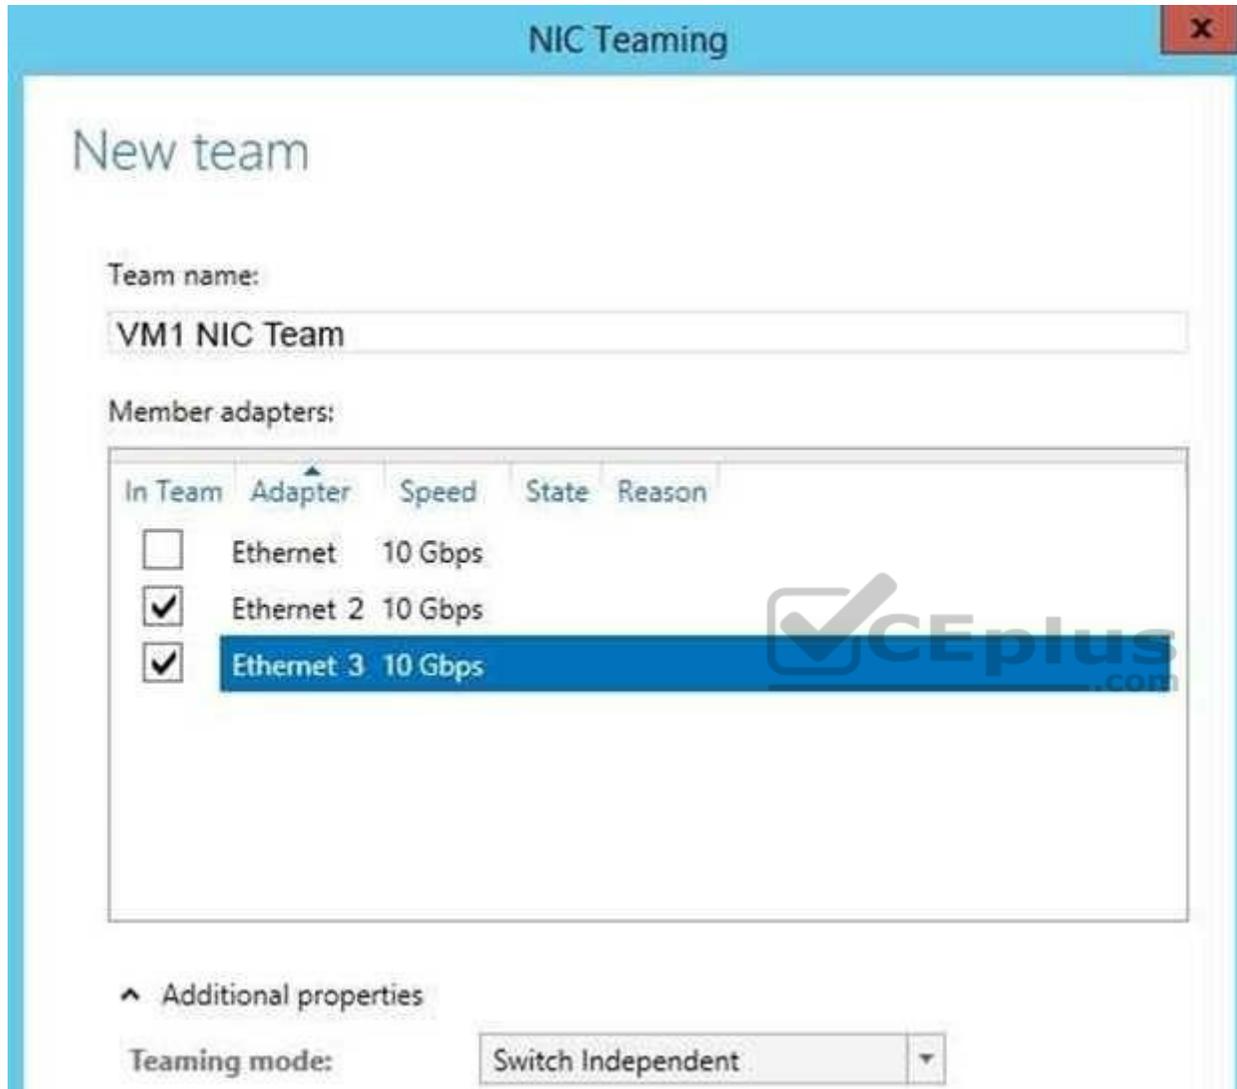

You have a server named Server1 that runs Windows Server 2016. Server1 is a Hyper-V host that hosts a virtual machine named VM1.

Server1 has three network adapter cards that are connected to virtual switches named vSwitch1, vSwitch2 and vSwitch3.

<https://vceplus.com/>

You configure NIC Teaming on VM1 as shown in the exhibit.

You need to ensure that VM1 will retain access to the network if a physical adapter card fails on Server1. What should you do?

- A. From Hyper-V Manager on Server1, modify the settings of VM1.
- B. From Windows PowerShell on Server1, run the **Set-VmSwitch** cmdlet.

- C. From the properties of the NIC team on VM1, add the adapter named Ethernet to the NIC team.
- D. From the properties of the NIC team on VM1, change the load balancing of the NIC team.

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

**QUESTION 96**

**HOTSPOT**

You have a server named Server1 that runs Windows Server 2016. Server1 is a Hyper-V host. You have two network adapter cards on Server1 that are Remote Direct Memory Access (RDMA) -capable.

You need to aggregate the bandwidth of the network adapter cards for a virtual machine on Server1.

The solution must ensure that the virtual machine can use the RDMA capabilities of the network adapter cards.

Which command should you run first? To answer, select the appropriate options in the answer area.

**Hot Area:**

**Answer Area**

<div style="border: 1px solid gray; padding: 2px;">▼</div> <div style="border: 1px solid gray; padding: 2px;">Add-NetLbfoTeamNic</div> <div style="border: 1px solid gray; padding: 2px;">Add-VmNetworkAdapter</div> <div style="border: 1px solid gray; padding: 2px;">New-NetLbfoTeam</div> <div style="border: 1px solid gray; padding: 2px;">New-VmSwitch</div>	-Name Production -NetAdapterName "NIC 1", "NIC 2"	<div style="border: 1px solid gray; padding: 2px;">▼</div> <div style="border: 1px solid gray; padding: 2px;">-EnableEmbeddedTeaming</div> <div style="border: 1px solid gray; padding: 2px;">-EnableIov</div> <div style="border: 1px solid gray; padding: 2px;">-EnablePacketDirect</div>	Struc
---	---	---	-------

**Correct Answer:**

**Answer Area**

	Name Production - NetAdapterName "NIC 1", "NIC 2"		True
▼		▼	
Add-NetLbfoTeamNic		-EnableEmbeddedTeaming	
Add-VmNetworkAdapter		-EnableIov	
New-NetLbfoTeam		-EnablePacketDirect	
New-VmSwitch

**QUESTION 97**

You have a Nano Server that runs Windows Server 2016. The Nano Server runs on a physical machine.

You have not installed any packages on the server.

You attach a new disk to the server, and you initialize the disk as a GPT disk.

You need to create a ReFS-formatted volume on the new disk.

What should you do first?

- A. From the physical server, log on to the Nano Server Recovery Console.
- B. Install the Microsoft NanoServer-Host-Package package.
- C. Run the **Format-Volume** cmdlet and specify the **-FileSystem** switch.
- D. Install the Microsoft NanoServer-Storage-Package package.

**Correct Answer: D**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

**QUESTION 98**

**Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.**

**After your answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.**

You have a server named Server1 that runs Windows Server 2016.

You plan to use Windows Server Backup to back up all of the data on Server1.

You create a new volume on Server1.

You need to ensure that the new volume can be used as a backup target.

The backup target must support incremental backups.

Solution: You mount the volume to C:\Backup, and you format the volume by using NTFS.

Does this meet the goal?

- A. Yes
- B. No

**Correct Answer: A**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

#### **QUESTION 99**

You create a Nano server image named Nano1.vhdx by using the **New-NanoServerImage** cmdlet.

You attach Nano1.vhdx to a Generation 1 virtual machine named Nano1.

When you start Nano1, you get the following error message:

"Boot failure. Reboot and select proper Boot device or Insert Boot Media in selected Boot device"

You need to successfully start Nano server.

What should you do?

<https://vceplus.com/>

- A. Attach Nano1.vhdx to a SCSIcontroller.
- B. Recreate Nano1 as a Generation 2 virtual machine.
- C. Increase the memory of Nano1 to 512 Mb.
- D. Modify the BIOS settings of Nano1.

**Correct Answer:** B

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

A Generation 1 VM cannot boot from a vhdx disk; only a Generation 2 VM can boot from a vhdx disk.

#### **QUESTION 100**

You have two servers named Server1 and Server2 that run Windows Server 2016.

You plan to implement Storage Replica to replicate the contents of volumes on Server1 to Server2.

You need to ensure that the replication traffic between the servers is limited to a maximum of 100 Mbps.

Which cmdlet should you run?

- A. **Set-NetUDPSetting**
- B. **New-StorageQosPolicy**
- C. **Set-SmbBandwidthLimit**
- D. **Set-NetTCPSetting**
- E. **New-NetTransportFilter**
- F. **Set-NetworkController**
- G. **Set-NetUDPSetting**

**Correct Answer:** C

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### **QUESTION 101**

**Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.**

You have two servers named Server1 and Server2 that run Windows Server 2016. Server1 and Server2 have the Hyper-V server role installed and are nodes in a failover cluster.

On Server1, an administrator creates a virtual machine named VM1.

You need to configure VM1 for high availability.

Which tool should you use?

- A. the **clussvc.exe** command
- B. the **cluster.exe** command
- C. the Computer Management snap-in
- D. the **configurehyperv.exe** command
- E. the Disk Management snap-in
- F. the Failover Cluster Manager snap-in
- G. the Hyper-V Manager snap-in
- H. the Server Manager app

**Correct Answer:** F

**Section:** (none)

**Explanation**

**Explanation/Reference:** Explanation: <http://windowsitpro.com/hyper-v/make-vm-highly-available-windows-server-2012>

## QUESTION 102

You have a server named Server1 that runs Windows Server 2016.

Server1 has four SCSI disks and a storage pool named Pool1 that contains three disks.

You create a virtual disk named Disk 1 that uses a mirrored layout.

You create a partition named Partition1 that uses all of the available space on Disk 1.

You need to extend Partition1.

<https://vceplus.com/>

What should you do first?

- A. From Windows PowerShell, run the **Resize-VirtualDisk** cmdlet.
- B. From Windows PowerShell, run the **Resize-VHD** cmdlet.
- C. From Disk Management, modify the properties of Partition1.
- D. From Windows PowerShell, run the **Resize-Partition** cmdlet.
- E. From Windows PowerShell, run the **Resize-StorageTier** cmdlet.
- F. From Disk Management, extend a volume.
- G. From Windows PowerShell, run the **Expand-IscsiVirtualDisk** cmdlet.

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### QUESTION 103

You have Nano Server image named Disk1 .vhdx.

You mount Disk1 .vhdx.

You need to add a folder that contains several files to the image.

Which tool or cmdlet you should use?

- A. **Copy-Item**
- B. **Add-WindowsImage**
- C. **Add-WindowsPackage**
- D. **Edit-NanoServerImage**
- E. Dism
- F. Nano Server Image  
Builder

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

**QUESTION 104**

Your network contains an Active Directory domain. The domain contains a new file server named Server1 that runs a Server Core installation of Windows Server 2016.

Server1 has an ReFS-formatted volume D: and NTFS-formatted volume E:. The volumes do not contain any data.

You install the Data Deduplication role service on Server1.

You need to implement Data Deduplication for volumes on D: and E:.

Solution: From Windows PowerShell, you run **Format-Volume D: -FileSystem EXFat** and **Enable-DeDupVolume -Volume D:,E:**.

Does this meet the goal?

- A. Yes
- B. No

**Correct Answer: B**  
**Section: (none)**  
**Explanation**

**Explanation/Reference:**

**QUESTION 105**

**Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.**

**After your answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.**

Your network contains an Active Directory forest named contoso.com.

You need to identify which server is the schema master.

Solution: From a command prompt, you run **netdom query fsmo**.

Does this meet the goal?

- A. Yes

B. No

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### QUESTION 108

You have a server named Server1 that runs Windows Server 2016.

You need to configure Server1 as a Web Application Proxy.

Which server role or role service should you install on Server1?

- A. Web Server (IIS)
- B. Network Policy and Access Services
- C. Direct Access and VPN (RAS)
- D. Active Directory Federation Services
- E. Remote Access

**Correct Answer:** E

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### QUESTION 109

Your network contains an Active Directory domain. The domain contains a new file server named Server1 that runs a Server Core installation of Windows Server 2016.

Server1 has an ReFS-formatted volume D: and NTFS-formatted volume E:.

The volumes do not contain any data.

You install the Data Deduplication role service on Server1.

You need to implement Data Deduplication for volumes on D: and E:.

Solution: From Windows PowerShell, you run **Enable-DeDupVolume-Volume D:,E:**.

Does this meet the goal?

- A. Yes
- B. No

**Correct Answer: B**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

#### **QUESTION 110**

**Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.**

**After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.**

Your network contains an Active Directory forest named contoso.com.

You need to identify which server is the schema master.

Solution: You open Active Directory Users and Computers, right-click contoso.com in the console tree, and then click Operations Master.

Does this meet the goal?

- A. Yes
- B. No

**Correct Answer:** B  
**Section:** (none)  
**Explanation**

**Explanation/Reference:**

Explanation:

This solution only shows the domain FSMO roles, not the forest FSMO roles.

References:

<https://blogs.technet.microsoft.com/mempson/2007/11/08/how-to-find-out-who-has-your-fsmo-roles/>

**QUESTION 111**

You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 hosts a virtual machine named VM1. VM1 is in a workgroup. VM1 is currently in a running state.

You need to create 10 copies of VM1 on Server1 in the least amount of time possible.

Which cmdlets should you use?

- A. **Stop-VM**, and then **Import-VM**
- B. **Export-VM**, and then **Import-VM**
- C. **Checkpoint-VM**, and then **New-VM**
- D. **Copy-VMFile**, and then **New-VM**

**Correct Answer:** B  
**Section:** (none)  
**Explanation**

**Explanation/Reference:**

**QUESTION 112**

You have two Hyper-V hosts named Server1 and Server2 that run Windows Server 2016.

Server1 and Server2 are connected to the same network.

On Server1 and Server2, you create an external network switch named Switch1.

You have the virtual machines shown in the following table.

Virtual machine name	IP address	Subnet mask	Hyper-V host
VM1	192.168.1.16	255.255.255.0	Server1
VM2	192.168.1.32	255.255.255.0	Server2
VM3	192.168.1.48	255.255.255.0	Server2

All three virtual machines are connected to Switch1.

You need to prevent applications in VM3 from being able to capture network traffic from VM1 or VM2. The solution must ensure that VM1 retains network connectivity.

What should you do?

- A. On Server2, configure the VLAN ID setting of Switch1.
- B. On Server2, create an external switch and connect VM3 to the switch.
- C. Modify the subnet mask of VM1 and VM2.
- D. Configure network virtualization for VM1 and VM2.

**Correct Answer:** D

**Section:** (none)

**Explanation**

**Explanation/Reference:**

### QUESTION 113

DRAG DROP

You have a Hyper-V host named Server1 that runs Windows Server 2016.

Server 1 hosts a virtual machine named VM1 that runs Windows Server 2016.

Server1 has a USB 3.0 device attached to a PCI Express (PCIe) bus.

You need to provide VM1 with pass-through access to the USB 3.0 device.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Select and Place:**

<https://vceplus.com/>

Actions	Answer Area
On Server1, run the <b>Dismount-VMHostAssignableDevice</b> cmdlet.	1
On Server1, run the <b>Add-VMAssignableDevice</b> cmdlet	2
On Server1, run the <b>Disable-PnPDevice</b> cmdlet	3
On VM1, run the <b>Enable-PnPDevice</b> cmdlet	
On VM1, run the <b>Mount-VMHostAssignable Device</b> cmdlet	

Correct Answer:

Actions	Answer Area
	1 On Server1, run the <b>Disable-PnPDevice</b> cmdlet
	2 On Server1, run the <b>Dismount-VMHostAssignableDevice</b> cmdlet.
	3 On Server1, run the <b>Add-VMAssignableDevice</b> cmdlet
On VM1, run the <b>Enable-PnPDevice</b> cmdlet	
On VM1, run the <b>Mount-VMHostAssignable Device</b> cmdlet	

Section: (none)

#### QUESTION 114

**Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.**

**After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.**

You have a server named Server1 that runs Windows Server 2016.

You plan to use Windows Server Backup to back up all of the data on Server1.

You create a new volume on Server1.

You need to ensure that the new volume can be used as a backup target.

The backup target must support incremental backups.

Solution: You mount the volume to C:\Backup, and you format the volume by using exFAT.

Does this meet the goal?

- A. Yes
- B. No

**Correct Answer: B**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

#### QUESTION 115

**Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.**

**After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.**

**QUESTION 116**

**Note:** This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

**After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.**

You network contains an Active Directory forest named contoso.com. The forest contains a child domain named eu.contoso.com.

You plan to implement live migration between two Hyper-V hosts that run Windows Server 2016. The hosts are configured as shown in the following table.

Host name	Configuration
Host1	<ul style="list-style-type: none"><li>• Is a member of the contoso.com domain</li><li>• Uses an Intel Xeon processor released in 2012</li><li>• Has an external virtual switch named Switch1</li><li>• Hosts a virtual machine named VM1 that connects to Switch1</li></ul>
Host2	<ul style="list-style-type: none"><li>• Is a member of the eu.contoso.com domain</li><li>• Uses an Intel Xeon processor released in 2016</li><li>• Has an external virtual switch named Switch1</li></ul>

You need to ensure that you can perform a live migration of VM1 from Host1 to Host2.

Solution: On Host1 and Host2, you create a private switch named Priv1, and then you connect VM1 to Priv1.

Does meet the goal?

- A. Yes
- B. No

**Correct Answer:**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

**QUESTION 117**

**Note:** This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

**After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.**

You network contains an Active Directory forest named contoso.com. The forest contains a child domain named eu.contoso.com.

You plan to implement live migration between two Hyper-V hosts that run Windows Server 2016. The hosts are configured as shown in the following table.

<b>Host name</b>	<b>Configuration</b>
Host1	<ul style="list-style-type: none"><li>• Is a member of the contoso.com domain</li><li>• Uses an Intel Xeon processor released in 2012</li><li>• Has an external virtual switch named Switch1</li><li>• Hosts a virtual machine named VM1 that connects to Switch1</li></ul>
Host2	<ul style="list-style-type: none"><li>• Is a member of the eu.contoso.com domain</li><li>• Uses an Intel Xeon processor released in 2016</li><li>• Has an external virtual switch named Switch1</li></ul>

You need to ensure that you can perform a live migration of VM1 from Host1 to Host2.

Solution: You move Host2 to the contoso.com domain.

Does meet the goal?

- A. Yes
- B. No

**Correct Answer:**

You plan to use Windows Server Backup to back up all of the data on Server1.

You create a new volume on Server1.

You need to ensure that the new volume can be used as a backup target.

The backup target must support incremental backups.

Solution: You assign a drive letter to the volume, and you format the volume by using exFAT.

Does this meet the goal?

- A. Yes
- B. No

**Correct Answer:** B

**Section:** (none)

**Explanation**

**Explanation/Reference:**

**QUESTION 120**

Your network contains an Active Directory domain named contoso.com. The domain contains a Hyper-V host named Server1 that runs Windows Server 2016.

Server1 hosts four virtual machines that are members of the domain. The virtual machines are configured as shown in the following table.

Virtual machine name	Operating system	Virtual machine generation	Type of VHD file
VM1	Windows 10	2	VHD
VM2	Windows Server 2016	2	VHD
VM3	Windows Server 2012 R2	2	VHDx
VM4	Windows Server 2016	1	VHDx

Which virtual machines can you manage by using PowerShell Direct?

- A. VM1, VM2, and VM3
- B. VM1, VM2, and VM4
- C. only VM2
- D. only VM4

**Correct Answer:** B

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

To use PowerShell Direct, the host operating system must run at least Windows 10 or Windows Server 2016.

References: <https://docs.microsoft.com/en-us/windows-server/virtualization/hyper-v/manage/manage-windows-virtual-machines-with-powershell-direct#whatsrequired-to-use-powershell-direct>

### QUESTION 121

You have two Hyper-V hosts named Server1 and Server2 that run Windows Server 2016. The hosts are nodes in failover cluster.

A highly available virtual machine named VM1 is running on Server1.

You need to move VM1 to Server2 while minimizing downtime.

What should you do?

- A. From Windows PowerShell, run **Move-ClusterGroup**

- B. From Hyper-V Manager, use the **Move** action.
- C. From Failover Cluster Manager, use the **Move Virtual Machine Storage** option.
- D. From Windows PowerShell, run **Move-VM**.

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### QUESTION 122

You have two Hyper-V hosts named Server1 and Server2 that run Windows Server 2016. Server1 hosts a virtual machine named VM1 that is in a Running state.

On Server1, you export VM1 and then you import VM1 on Server2.

What is the current state of VM1 on Server2?

- A. Paused
- B. Off
- C. Saved
- D. Running

**Correct Answer:** C

**Section:** (none)

**Explanation**

**Explanation/Reference:**

References: <https://blog.workinghardinit.work/2016/06/16/live-export-a-running-virtual-machine-or-a-checkpoint/>

#### QUESTION 123

You have a file server named Server1 that runs Windows Server 2016.

Object access auditing is configured on Server1.

You need to filter the Security event log to show all log entries that relate to a user named User1.

What should you do?

- A. Right-click the **Security** log, and then click **Filter Current Log...** On the Filter tab, type a value in the User box.
- B. Right-click the **Security** log, and then click **Filter Current Log...** On the Filter tab, select a value from the Event sources box.
- C. Right-click the **Security** log, and then click **Create Custom View...** On the Filter tab, type a value in the User box.
- D. Right-click the **Security** log, and then click **Filter Current Log...** On the XML tab, modify the QueryList entry and set an EventData tag.

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

Right clicking the event log name and selecting the “Filter Current Log” will display various options for filtering the event log.

These options are:

- Time logged: There are pre-canned filters for the last hour, last 12 hours, last 24 hours, last week and last 30 days. Additionally you can specify a custom range.
- Event level: Choose to show only events that match the specified level critical, warning etc.
- Event Source: Select to only see events from MSI Installer, DHCP client etc.
- EventID: Specify the event ID.
- Keywords: Specify filters based on Audit Failure, Audit success
- User
- Computer(s)

References: <https://blogs.technet.microsoft.com/rmilne/2014/08/06/quick-tip-event-viewer-filtering/>

#### **QUESTION 124**

You have a server named Server1 that runs Windows Server 2016.

The server has an application named App1. App1 writes entries to the Application event log when errors are encountered. The events have IDs of either 111 or 112.

You need to restart the service whenever either of these events is logged.

What should you do?

- A. From Windows PowerShell, run the **Get-SMServerEvent** cmdlet and pipe the output to the **Start-NetEventSession** cmdlet.
- B. From Event Viewer, create a subscription that has a filter for the event IDs.
- C. From Task Scheduler, use **Create Task** to create one task that includes triggers for both event IDs.
- D. From Windows PowerShell, run the **Get-Event** cmdlet and pipe the output to the **Start-NetEventSession** cmdlet.

**Correct Answer:** C

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### QUESTION 125

You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 has an external virtual switch named Switch1. Server1 hosts a virtual machine named VM1 that runs Windows Server 2016. VM1 has one network adapter. The network adapter connects to Switch1.

You need to limit the maximum network bandwidth available to VM1 to 100 Mbps. The solution must limit the bandwidth for VM1 only.

Which cmdlet should you run?

- A. **Set-NetAdapter**
- B. **Set-VMNetworkAdapter**
- C. **Set-VM**
- D. **Set-NetAdapterVmq**
- E. **Set-NetworkSwitchPortProperty**

**Correct Answer:** B

**Section:** (none)

**Explanation**

**Explanation/Reference:**

The Set-VMNetworkAdapterVlan cmdlet configures virtual LAN settings for the traffic through a virtual network adapter.

Incorrect Answers:

- A: The Set-NetAdapter cmdlet sets the basic properties of a network adapter such as virtual LAN (VLAN) identifier (ID) and MAC address.
- C: The Set-VM cmdlet configures a virtual machine.
- D: The Set-NetAdapterVmq cmdlet sets the virtual machine queue (VMQ) properties of a network adapter. VMQ is a scaling networking technology for Hyper-V switch that improves network throughput by distributing processing of network traffic for multiple virtual machines among multiple processors.

References:

<http://www.itprotoday.com/virtualization/restrict-bandwidth-virtual-machine>  
<https://docs.microsoft.com/en-us/powershell/module/hyper-v/set-vmnetworkadapervlan?view=win10-ps> <https://docs.microsoft.com/en-us/powershell/module/netadapter/set-netadapter?view=win10-ps> <https://docs.microsoft.com/en-us/powershell/module/hyper-v/set-vm?view=win10-ps>  
<https://docs.microsoft.com/en-us/powershell/module/netadapter/set-netadapervmq?view=win10-ps>

#### QUESTION 126

You have a Windows Server 2016 failover cluster that contains two servers named Server1 and Server2.

The Cluster Service on Server1 fails.

You need to identify the cause of the failure.

What should you do?

- A. From Windows PowerShell, run the **Get-ClusterNode** cmdlet.
- B. From Event Viewer, review the Application event log.
- C. From Windows PowerShell, run the **Get-ClusterLog** cmdlet.
- D. From Event Viewer, review the System event log.

**Correct Answer: C**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

References: <https://blogs.msdn.microsoft.com/clustering/2015/05/14/windows-server-2016-failover-cluster-troubleshooting-enhancements-cluster-log/>

#### QUESTION 127

You have a server named Server1 that is an iSCSI target. You have a server named Server2 that runs Windows Server 2016. Server2 has an iSCSI disk named Disk1 that is hosted on Server1. Disk1 contains one volume that is assigned a drive letter of E.

You need to increase the size of Disk1.

What should you do?

- A. Run the **Resize-IscsiVirtualDisk** cmdlet and specify the *-ComputerName Server2* parameter.
- B. Run the **Resize-IscsiVirtualDisk** cmdlet and specify the *-ComputerName Server1* parameter.
- C. Run the **Resize-Partition** cmdlet and specify the *-ComputerName Server1* parameter.
- D. Run the **Resize- Partition** cmdlet and specify the *-ComputerName Server2* parameter.

**Correct Answer:** B

**Section:** (none)

**Explanation**

**Explanation/Reference:**

The Resize-IscsiVirtualDisk cmdlet resizes a virtual disk either by expanding or compacting an existing virtual disk.

The -ComputerName parameter specifies the computer name, or IP address, of the remote computer, if this cmdlet is run on a remote computer. If you do not specify a value for this parameter, the cmdlet uses the local computer.

Incorrect Answers:

A: Resize-IscsiVirtualDisk would be run on Server2. Server2 has an iSCSI disk named Disk1 that is hosted on Server1. Therefore, Server1 would be specified in the -ComputerName parameter.

C, D: The Resize-Partition cmdlet resizes a partition and the underlying file system. It does not take a -ComputerName parameter.

References:

<https://docs.microsoft.com/en-us/powershell/module/iscsitarget/resize-iscsivirtualdisk?view=win10-ps> <https://docs.microsoft.com/en-us/powershell/module/storage/resize-partition?view=win10-ps>

## QUESTION 128

**Note:** This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

**After your answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.**

Your network contains an Active Directory domain. The domain contains a new file server named Server1 that runs a Server Core installation of Windows Server 2016.

Server1 has an ReFS-formatted volume D: and NTFS-formatted volume E: The volumes do not contain any data.

You install the Data Deduplication role service on Server1.

You need to implement Data Deduplication for volumes on D: and E:.

Solution: From Windows PowerShell, you run **Format-Volume D: -FileSystem NTFS** and **Enable-DeDupVolume -Volume D:,E:**.

Does this meet the goal?

- A. Yes
- B. No

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

Data Deduplication is supported on NTFS formatted volumes. You, therefore, need to format the ReFS-formatted volume D: as an NTFS volume. The Enable-DedupVolume cmdlet enables data deduplication on one or more volumes.

References: <https://docs.microsoft.com/en-us/windows-server/storage/data-deduplication/understand>  
<https://docs.microsoft.com/en-us/powershell/module/deduplication/enable-dedupvolume?view=win10-ps>

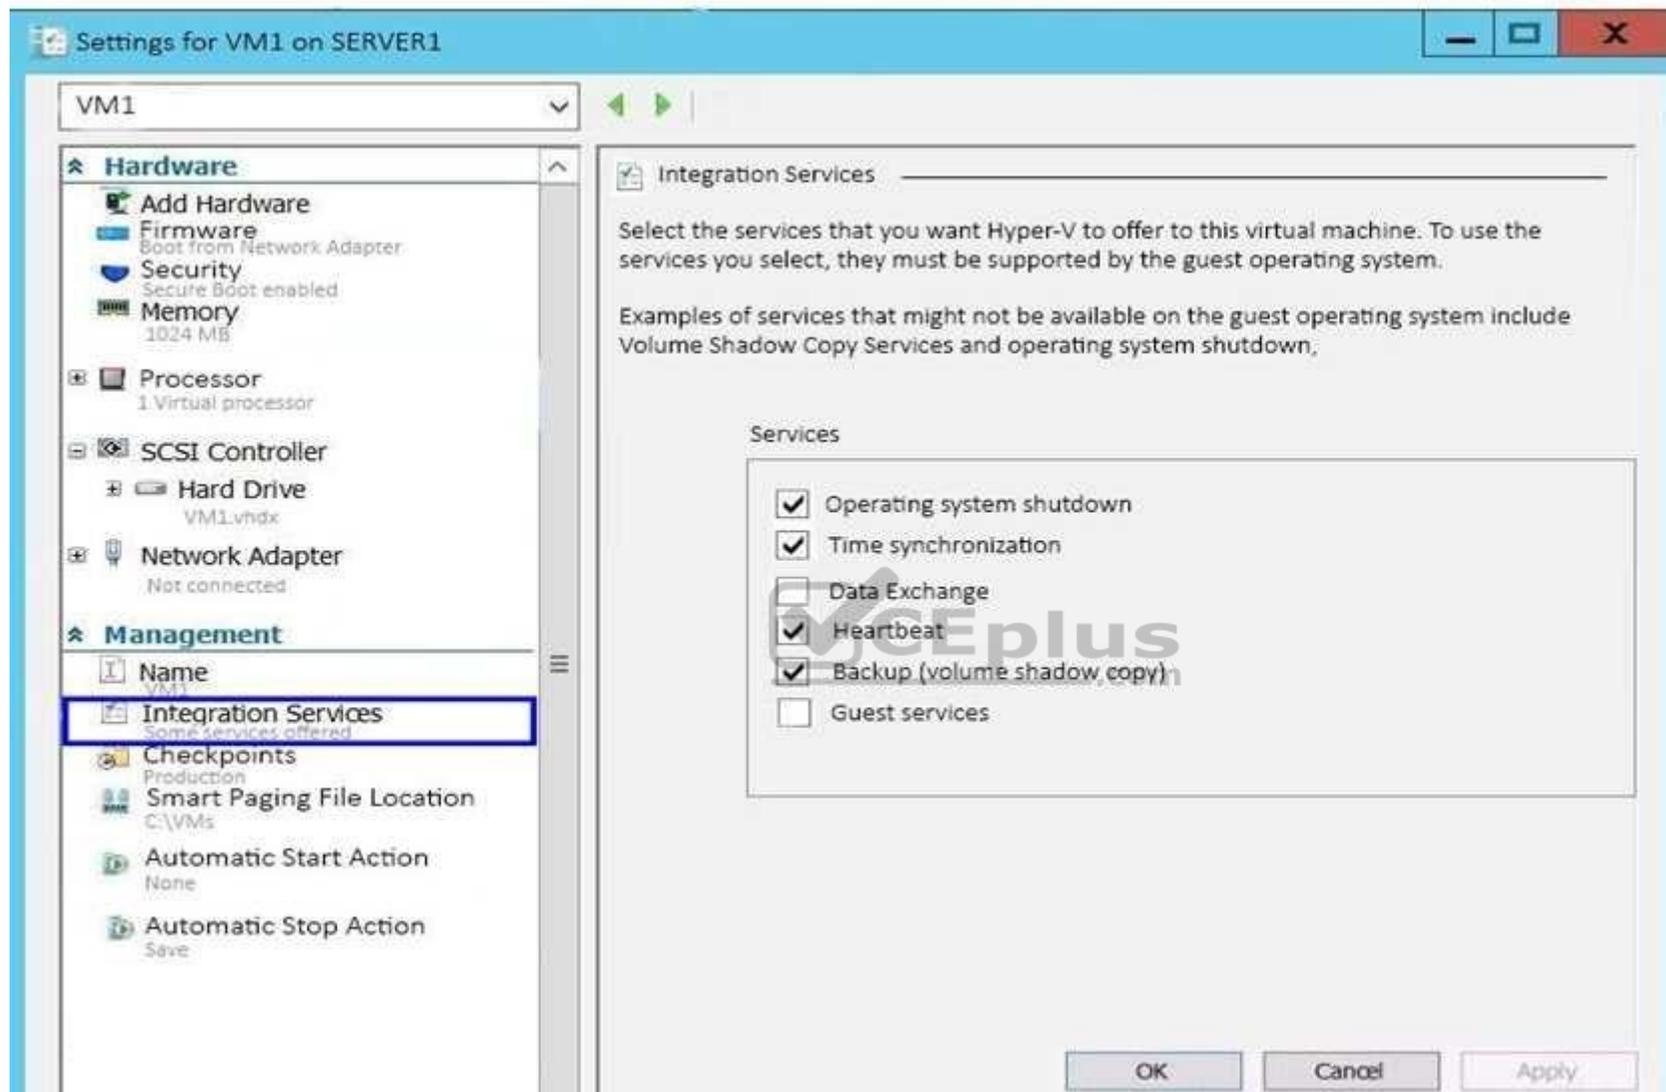

#### QUESTION 129

**Note:** This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

**After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.**

You have a Hyper-V host named Server1 that hosts a virtual machine named VM1. Server1 and VM1 run Windows Server 2016.

The settings for VM1 are configured as shown in the exhibit. (Click the **Exhibit** button.)

You need to ensure that you can use the Copy-VMFile cmdlet on Server1 to copy files from VM1.

Solution: You enable the Guest services integration service for VM1.

Does this meet the goal?

- A. Yes
- B. No

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

The guest service allows the Hyper-V administrator to copy files to a running virtual machine without using a network connection. Beforehand the only way to copy files to the virtual machine was for both the virtual machine and the host be connected to same network and then either use file services to copy file or to create a remote desktop session to the virtual machine and copy files via RDS session.

To copy a file to a virtual machine you need to use the Copy-VMFile PowerShell cmdlet.

References: [https://technet.microsoft.com/en-us/library/dn798297\(v=ws.11\).aspx](https://technet.microsoft.com/en-us/library/dn798297(v=ws.11).aspx)

### QUESTION 130

You have a server named Server1 that runs Windows Server 2016.

Server1 has four SCSI disks and a storage pool named Pool1 that contains three disks.

You create a virtual disk named Disk 1 that uses a mirrored layout.

You create a partition named Partition1 that uses all of the available space on Disk 1.

You need to extend Partition1.

What should you do first?

- A. From Windows PowerShell, run the `Resize-Partition` cmdlet.
- B. From Disk Management, modify the properties of Partition1.
- C. From the Storage Pools page in Server Manager, extend a virtual disk.
- D. From Disk Management, extend a volume.
- E. From Windows PowerShell, run the `Resize-VHD` cmdlet.
- F. From Windows PowerShell, run the `Resize-StorageTier` cmdlet.
- G. From Windows PowerShell, run the `Expand-IscsiVirtualDisk` cmdlet.

**Correct Answer:** C

**Section:** (none)

**Explanation**

**Explanation/Reference:**

References: <https://charbelnemnom.com/2015/03/step-by-step-how-to-extend-and-resize-a-two-way-mirrored-storage-tiered-space-storagespaces-ws2012r2/>

### QUESTION 131

You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 hosts a virtual machine named VM1.

You need to provide VM1 with direct access to a graphics processing unit (GPU) on Server1.

What should you do first?

- A. On VM1, install the Quality Windows Audio Video Experience (qWave) feature.
- B. Dismount the display adapter on Server1.
- C. In the settings of VM1, add a RemoteFX 3D Video Adapter.
- D. Disable the display adapter device on Server1.

**Correct Answer:** D

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

Before the physical device is allowed to be passed through to the VM, the device must be disabled on the host system. The physical device must be accessible/available exclusively to the VM only.

Introduction to Windows Server 2016 Hyper-V DiscreteDevice Assignment, page 5

<https://lenovopress.com/lp0088.pdf>

### QUESTION 132

HOTSPOT

You deploy a new Hyper-V host named Server1 that runs Windows Server 2016.

<https://vceplus.com/>

You implement receive side scaling (RSS) on Server1. The chipset on Server1 does not support NetDMA.

All of the equipment on your network supports 10-Gbps connectivity.

On Server1, you deploy a virtual machine named VM1. You configure VM1 to aggregate all of the Windows and non-Windows log files for all of the servers on the network. VM1 has four virtual processors.

You discover that VM1 drops packets.

You monitor the network, and you discover that the network capacity is sufficient for the monitoring traffic.

You monitor the performance of VM1, and you discover that one processor is consistently at 100 percent utilization, while the other processors are barely in use.

You need to resolve the performance issue.

What should you do? To answer, select the appropriate options in the answer area.

**Hot Area:**

## Answer Area

First action:

	▼
Enable TCP Chimney Offload on Server1	
Enable single root I/O virtualization (SR-IOV) on VM1	
Enable virtual machine queue (VMQ) on Server1 and VM1	

Second action:

	▼
Enable virtual TCP Chimney Offload on VM1	
Enable virtual Receive-side Scaling (vRSS) on VM1	
Enable single root I/O virtualization (SR-IOV) on Server1	

**Correct Answer:**

## Answer Area

First action:

Enable TCP Chimney Offload on Server1
Enable single root I/O virtualization (SR-IOV) on VM1
Enable virtual machine queue (VMQ) on Server1 and VM1

Second action:

Enable virtual TCP Chimney Offload on VM1
Enable virtual Receive-side Scaling (vRSS) on VM1
Enable single root I/O virtualization (SR-IOV) on Server1

Section: (none)  
Explanation

Explanation/Reference:

### QUESTION 133

**Note:** This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

A company named Contoso, Ltd. has several servers that run Windows Server 2016. Contoso has a Hyper-V environment that uses failover clustering and Windows Server Update Services (WSUS). The environment contains several Windows containers and several virtual machines.

The WSUS deployment contains one upstream server that is located on the company's perimeter network and several downstream servers located on the internal network. A firewall separates the upstream server from the downstream servers.

You plan to deploy a human resources application to a new server named HRServer5. HRServer5 contains a FAT32-formatted data volume.

The CIO of Contoso identifies the following requirements for the company's IT department:

- Deploy a failover cluster to two new virtual machines.

- Store all application databases by using Encrypted File System (EFS).
- Ensure that each Windows container has a dedicated IP address assigned by a DHCP server.
- Produce a report that lists the processor time used by all of the processes on a server named Server1 for five hours.
- Encrypt all communication between the internal network and the perimeter network, including all WSUS communications.
- Automatically load balance the virtual machines hosted in the Hyper-V cluster when processor utilization exceeds 70 percent.

Which networking mode should you configure for the Windows containers?

- A. 12tunnel
- B. 12bridge
- C. network address translation (NAT)
- D. transparent

**Correct Answer:** D

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

From the scenario:

- Ensure that each Windows container has a dedicated IP address assigned by a DHCP server.

Transparent mode supports static or dynamic (using external DHCP server) IP allocation and assignment from IP addresses within container host's network prefix.

Incorrect Answers:

A: L2Tunnel mode is reserved for private and public cloud deployments when containers are running on a tenant VM.

B: L2Bridge mode only supports static IP assignment.

C: NAT is the default network mode and attaches containers to a private IP subnet. This mode supports dynamic IP allocation and assignment but by Host Networking Service (HNS) from internal NAT subnet prefix.

<https://docs.microsoft.com/en-us/virtualization/windowscontainers/container-networking/advanced> <https://techcommunity.microsoft.com/t5/Containers/Windows->

[Container-Networking/ba-p/382298](https://techcommunity.microsoft.com/t5/Containers/Windows-Container-Networking/ba-p/382298)

#### **QUESTION 134**

You have a Windows Server 2106 failover cluster named Cluster1 that contains four nodes named Server1, Server2, Server3, and Server4. Cluster1 hosts 40 virtual machines that are distributed evenly across the nodes.

Server1 and Server2 are located in a data center in Madrid. Server3 and Server4 are located in a data center in Barcelona.

You need to ensure that when you pause a node, the clustered virtual machines will always attempt to move automatically to another node in the same data center before attempting to move to a node in the other data center.

Which two actions should you perform? Each correct answer presents part of the solution.

- A. Run the **New-ClusterFaultDomain** cmdlet.
- B. Run the **Add-ClusterGroup** cmdlet.
- C. Configure a file share witness for each data center.
- D. Run the **Set-ClusterFaultDomain** cmdlet.
- E. Create an Active Directory site for each data center.
- F. Change the quorum configuration of the cluster to **Node Majority**.

**Correct Answer:** BC

**Section:** (none)

**Explanation**

**Explanation/Reference:**

### QUESTION 135

You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 hosts a virtual machine named VM1. VM1 has the following settings:

- Nested virtualization is enabled.
- Dynamic Memory is disabled.

VM1 is currently running.

You need to adjust the amount of memory assigned to VM1 as quickly as possible.

What should you do first?

- A. Change the memory buffer setting of VM1.
- B. Pause VM1.
- C. Shut down VM1.
- D. Enable Dynamic Memory for VM1.

**Correct Answer:** C

**Section:** (none)

**Explanation**

**Explanation/Reference:**

References: <https://docs.microsoft.com/en-us/virtualization/hyper-v-on-windows/user-guide/nested-virtualization>

#### QUESTION 136

**Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.**

A company named Contoso, Ltd. has several servers that run Windows Server 2016. Contoso has a Hyper-V environment that uses failover clustering and Windows Server Update Services (WSUS). The environment contains several Windows containers and several virtual machines.

The WSUS deployment contains one upstream server that is located on the company's perimeter network and several downstream servers located on the internal network. A firewall separates the upstream server from the downstream servers.

You plan to deploy a human resources application to a new server named HRServer5. HRServer5 contains a FAT32-formatted data volume.

The CIO of Contoso identifies the following requirements for the company's IT department:

- Deploy a failover cluster to two new virtual machines.
- Store all application databases by using Encrypted File System (EFS).
- Ensure that each Windows container has a dedicated IP address assigned by a DHCP server.
- Produce a report that lists the processor time used by all of the processes on a server named Server1 for five hours.
- Encrypt all communication between the internal network and the perimeter network, including all WSUS communications.
- Automatically load balance the virtual machines hosted in the Hyper-V cluster when processor utilization exceeds 70 percent.

Which two actions should you perform to meet the encryption requirement for WSUS? Each correct answer presents part of the solution.

- A. Require SSL on the Inventory virtual directory.
- B. Require SSL on the ClientWebService virtual directory.
- C. Create a firewall rule to allow TCP port 443.
- D. Create a firewall rule to allow TCP port 8531.

**Correct Answer:** BC

**Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.**

**After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.**

You have two servers that run Windows Server 2016.

You plan to create a Network Load Balancing (NLB) cluster that will contain both servers.

You need to configure the network cards on the servers for the planned NLB configuration.

Solution: You configure the network cards to be on a separate subnet and to have static IP addresses. You configure the cluster to use unicast.

Does this meet the goal?

A. Yes

B. No

**Correct Answer: B**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

#### **QUESTION 141**

You have four servers named Server1, Server2, Server3, and Server4 that run Windows Server 2016. Server1 and Server2 have the Hyper-V server role installed. Server1 hosts a virtual machine named VM1. Server2 hosts a virtual machine named VM2. Server3 hosts the disks and the configurations of both virtual machines on an SMB share named VMShare. All servers are joined to an Active Directory domain.

You use Server4 to manage Hyper-V operations on Server1 and Server2.

From Server4, you attempt to perform a live migration of VM1 and VM2, but you receive the following error message: “No credentials are available in the security package”.

You need to ensure that you can perform the live migration of VM1 and VM2 between Server1 and Server2 while signed in to Server4.

What should you do?

- A. From Active Directory Users and Computers, modify the properties of Server4. Configure the delegation settings to trust the computer for delegation of cifs.
- B. From Windows PowerShell on Server3, run the remove-SMBMultiChannelConstraint cmdlet, and then assign Server4 Full Control permissions to VMShare.
- C. From Active Directory Users and Computers, modify the properties of Server1 and Server2. Configure the Delegation settings to trust the computers for delegation of the Microsoft Virtual System Migration Service.
- D. From Active Directory Users and Computers, modify the properties of your user account. Modify the Account is sensitive and cannot be delegated setting.

**Correct Answer:** C

**Section:** (none)

**Explanation**

**Explanation/Reference:**

References: <https://docs.microsoft.com/en-us/windows-server/virtualization/hyper-v/deploy/set-up-hosts-for-live-migration-without-failover-clustering>

**QUESTION 142**

You have a server that runs Windows Server 2016 Standard.

You create a new three-way mirror storage space. You format the storage space by using ReFS.

Which two features can you use on the new storage space? Each correct answer presents a complete solution.

- A. file and folder permissions
- B. disk quotas
- C. Encrypting File System (EFS)
- D. long file names
- E. Data Deduplication
- F. Shrink volume

**Correct Answer:** AE

**Section:** (none)

**Explanation**

**Explanation/Reference:**

References:

<https://docs.microsoft.com/en-us/windows-server/storage/refs/refs-overview>

**QUESTION 143**

**Note:** This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

**After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.**

Your network contains an Active Directory forest named contoso.com. The forest contains a child domain named eu.contoso.com.

You plan to implement live migration between two Hyper-V hosts that run Windows Server 2016. The hosts are configured as shown in the following table.

Host name	Configuration
Host1	<ul style="list-style-type: none"><li>• Is a member of the contoso.com domain</li><li>• Uses an Intel Xeon processor released in 2012</li><li>• Has an external virtual switch named Switch1</li><li>• Hosts a virtual machine named VM1 that connects to Switch1</li></ul>
Host2	<ul style="list-style-type: none"><li>• Is a member of the eu.contoso.com domain</li><li>• Uses an Intel Xeon processor released in 2016</li><li>• Has an external virtual switch named Switch1</li></ul>

You need to ensure that you can perform a live migration of VM1 from Host1 to Host2.

Solution: You replace the processor in Host1 with a processor that is identical to the processor in Host2.

Does meet the goal?

- A. Yes
- B. No

**Correct Answer:** B

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### QUESTION 144

**Note:** This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

**After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.**

You have a server named Server1 that runs Windows Server 2016. Server1 has the Hyper-V server role and Docker installed.

You pull the Microsoft/iis Docker image to Server1.

You need to view the available space in the Microsoft/iis Docker image.

Solution: You run the command `docker run --isolation hyperv -d microsoft/iis`.

You open Disk Management on Server1.

Does this meet the goal?

- A. Yes
- B. No

**Correct Answer: B**

**Explanation/Reference:**

#### **QUESTION 145**

You have a Hyper-V server named Server1 that runs Windows Server 2012 R2.

Server1 hosts a virtual machine named VM1 that runs Windows Server 2016. VM1 connects to an external virtual switch named Switch1.

You can ping VM1 from Server1.

You upgrade Server1 to Windows Server 2016.

You need to ensure that you can connect to VM1 by using PowerShell Direct.

What should you do?

- A. Configure the firewall rules on Server1.
- B. Enable the Hyper-V extensible switch extensions on Server1.
- C. Upgrade the configuration version of VM1.
- D. Configure the firewall rules on VM1.

**Correct Answer: C**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

#### QUESTION 146

You have a server named Server1 that runs Windows Server 2016. Windows Defender is enabled on Server1.

Server1 runs an application named App1 that stores various types of files in Microsoft OneDrive for Business, MicrosoftOneDrive, and Microsoft SharePoint Online. App1 also interacts with several local services.

You need to prevent Windows Defender from scanning any files opened by App1.

What should you do on Server1?

- A. From the Windows Defender settings, configure a file exclusion.
- B. Run the **New-CiPolicy** cmdlet.
- C. Modify the real-time protection settings in Windows Defender.
- D. From the Windows Defender settings, configure a process exclusion.
- E. Run the **Set-ExecutionPolicy** cmdlet.
- F. Run the **New-AppLockerPolicy** cmdlet.

**Correct Answer:** D

**Section:** (none)

**Explanation**

**Explanation/Reference:**

References:

<https://docs.microsoft.com/en-us/windows/security/threat-protection/windows-defender-antivirus/configure-process-opened-file-exclusions-windows-defenderantivirus> <https://docs.microsoft.com/en-us/windows/security/threat-protection/windows-defender-antivirus/configure-server-exclusions-windows-defender-antivirus>

#### QUESTION 147

You have a server named Server1 that runs Windows Server 2016. Server1 has two network adapters that support single root I/O virtualization (SR-IOV). The network adapters are from two different vendors.

You plan to install the Hyper-V server role on Server1, and then to create a virtual machine named VM1 that runs Windows Server 2016. VM1 will use SR-IOV.

You need to ensure that VM1 can use both network adapters for load balancing and failover.

What should you do?

<https://vceplus.com/>

- A. On Server1, create two virtual switches without embedded teaming. On VM1, create one NIC team.
- B. On Server1, create one virtual switch without embedded teaming. On VM1, create one NIC team.
- C. On Server1, create one NIC team. On VM1, create one NIC team.
- D. On Server1, create one virtual switch that has embedded teaming. On VM1, create two NIC teams.

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

**QUESTION 148**

You have a server named Server1 that runs Windows Server 2016.

Server1 is a Docker host.

You are creating a Dockerfile to build a Docker image.

You need to add a file named File1.txt from Server1 to C:\Folder1\ in the Docker image.

What are two possible commands that you can use to achieve the goal? Each correct answer presents a complete solution.

**NOTE:** Each correct selection is worth one point.

- A. `COPY file1.txt c:/folder1/`
- B. `copy-item file1.txt folder1\file1.txt`
- C. `ROBOCOPY file.txt \folder1\`
- D. `XCOPY file1.txt c:\folder1\`
- E. `ADD file1.txt /folder1/`

**Correct Answer:** AE

**Section:** (none)

**Explanation**

**Explanation/Reference:**

References:

<https://docs.microsoft.com/en-us/virtualization/windowscontainers/manage-docker/manage-windows-dockerfile>

**QUESTION 149**

**Note:** This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are a server administrator at a company named Contoso, Ltd.

Contoso has a Windows Server 2016 Hyper-V environment configured as shown in the following table.

Hyper-V host name	Configuration	Virtual switch name
Host1	<ul style="list-style-type: none"><li>- Uses an Intel processor</li><li>- Is a member of a SAN named SAN1</li></ul>	Switch1
Host2	<ul style="list-style-type: none"><li>- Uses an AMD processor</li><li>- Has local storage only</li></ul>	Switch2
Host3	<ul style="list-style-type: none"><li>- Uses an Intel processor</li><li>- Is a member of a SAN named SAN1</li></ul>	Switch1
Host4	<ul style="list-style-type: none"><li>- Uses an Intel processor</li><li>- Has local storage only</li></ul>	Switch2

All of the virtual switches are of the external type.

You need to ensure that you can move virtual machines between the hosts without causing the virtual machines to disconnect from the network.

Solution: You implement live migration by using Host1 and Host3.

Does this meet the goal?

- A. Yes
- B. No

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

**QUESTION 150**

You plan to deploy three servers that will run Windows Server 2016. The servers will be configured as shown in the following table.

Server name	Hard disk configuration
Server1	Disk1: 250-GB, NTFS-formatted Disk2: 4-TB, ReFS-formatted
Server2	Disk1: 1-TB, NTFS-formatted Disk2: 2-TB, NTFS-formatted Disk3: 500-GB, exFAT-formatted
Server3	Disk1: 8-TB, NTFS-formatted Disk2: 2-TB, ReFS-formatted Disk3: 1-TB, ReFS-formatted

You need to ensure that you can use all of the available space on each disk.

What is one of the disks that you must initialize as a GPT disk?

- A. Disk2 on Server1
- B. Disk1 on Server2
- C. Disk1 on Server1
- D. Disk3 on Server3
- E. Disk2 on Server2
- F. Disk2 on Server3

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

GPT is more robust and allows for volumes bigger than 2 TB. The two disks that are larger than 2 TB are Disk2 on Server1 and Disk1 on Server3.

References: <https://docs.microsoft.com/en-us/windows-server/storage/disk-management/initialize-new-disks#about-partition-styles-GPT-and-MBR>

#### QUESTION 151

You have a server named Server1 that runs Windows Server 2016.

You need to install the DNS Server role on Server1.

What should you run?

- A. the **dnscmd.exe** command
- B. the **Enable-WindowsOptionalFeature** cmdlet
- C. the **dns.exe** command
- D. the **setup.exe** command
- E. the **Install-Package** cmdlet
- F. the **optionalfeatures.exe** command

**Correct Answer:** B

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### QUESTION 152

Your network contains an Active Directory domain named adatum.com. The domain contains a Network Load Balancing (NLB) cluster as shown in the exhibit. (Click the Exhibit button.)

Which hosts will respond to requests sent to nlb.adatum.com?

- A. Server1 only
- B. Server2 only
- C. Server1 and Server2 only

**Network Load Balancing Manager**

File Cluster Host Options Help

Network Load Balancing Cluster

NLB.Adatum.com (192.168.10.50)

0042	7/8/2017	2:07:53 AM	192.168.10...	SERVER1	End configuration change

D. Server1, Server2, and Server3

**Correct Answer:** B

**Section:** (none)

**Explanation**

**Explanation/Reference:**

**QUESTION 153**

You have a server named Server1 that runs Windows Server 2016.

The server has an application named App1. App1 writes entries to the Application event log when errors are encountered. The events have IDs of either 111 or 112.

You need to restart the service whenever either of these events is logged.

What should you do?

- A. From Windows PowerShell, run the `Get-SMSEvent` cmdlet and pipe the output to the `Start-NetEventSession` cmdlet.
- B. From Event Viewer, create a subscription that has a filter for the event IDs.
- C. From Event Viewer, use the Create Basic Task Wizard for each event ID.
- D. From Windows PowerShell, run the `Get-Event` cmdlet and pipe the output to the `Start-NetEventSession` cmdlet.
- E. From Windows PowerShell, run the `Write-EventLog` cmdlet and specify the `-EventID` parameter and the `-Source` parameter.
- F. From Event Viewer, create a custom view that has a filter for the event IDs.
- G. From Performance Monitor, add an Event Trace Session data collector that uses the Microsoft-Windows-Eventlog provider.

**Correct Answer:** C

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### QUESTION 154

You have a Network Load Balancing (NLB) cluster that contains two nodes named Server1 and Server2. The nodes run Windows Server 2016.

The NLB cluster has the following configuration.

```
ClusterName      :  
IPAddress        : 172.16.4.1  
Name             :  
ClusterIPAddress : 172.16.4.1  
ClusterNetworkMask : 255.255.0.0  
ClusterMacAddress : 02-bf-ac-10-04-01  
OperationMode    : UNICAST  
BdaReverseHash   : False  
BdaTeamActive    : False  
BdaTeamId        :  
BdaTeamMaster    : False
```

IPAddress	State	Start	End	Protocol	Mode	Affinity	Timeout
All	Enabled	0	65535	Both	Multiple	Single	0

You deploy the Web Server (IIS) server role identically to both servers.

You need to configure NLB to load balance requests between the web servers. HTTP requests must be stateless. HTTPS requests must be stateful.

What should you do? Each correct answer presents part of the solution.

- A. Modify the Cluster operation mode.
- B. Suspend the cluster.
- C. Drainstop the cluster.
- D. Add a new port rule.
- E. Edit the existing port rule.

**Correct Answer:** CD

**Section:** (none)

#### QUESTION 155

You have a server named Server1 that runs Windows Server 2016. Windows Defender is enabled on Server1.

Server1 runs an application named App1 that stores various types of files in Microsoft OneDrive for Business, MicrosoftOneDrive, and Microsoft SharePoint Online. App1 also interacts with several local services.

You need to prevent Windows Defender from scanning any files opened by App1.

What should you do on Server1?

- A. Run the **Set-ExecutionPolicy** cmdlet.
- B. Run the **New-AppLockerPolicy** cmdlet.
- C. Modify the real-time protection settings in Windows Defender.
- D. Run the **Add-MpPreference** cmdlet.
- E. Modify the cloud-based protection settings in Windows Defender.
- F. Run the **New-CiPolicy** cmdlet.

**Correct Answer:** D

**Section:** (none)

**Explanation**

**Explanation/Reference:** References: <https://docs.microsoft.com/en-us/windows/security/threat-protection/windows-defender-antivirus/configure-process-opened-file-exclusions-windows-defenderantivirus> <https://docs.microsoft.com/en-us/windows/security/threat-protection/windows-defender-antivirus/configure-server-exclusions-windows-defender-antivirus>

#### QUESTION 156

You have a server named Server1. Server1 contains a drive named D that has Data Deduplication enabled.

You delete 1 TB of files from drive D.

You need to ensure that you can use all the disk space that was used by the deleted files as soon as possible.

What should you run?

<https://vceplus.com/>

- A. the `Update-DedupStatus` cmdlet
- B. the **ThroughputOptimization** task from the Task Scheduler
- C. the **WeeklyGarbageCollection** task from the Task Scheduler
- D. the `Set-DedupVolume` cmdlet

**Correct Answer:** C

**Section:** (none)

**Explanation**

**Explanation/Reference:**

References:

<https://social.technet.microsoft.com/wiki/contents/articles/13848.dedupe-ensure-deduplication-garbage-collection-jobs-are-enabled.aspx>

#### QUESTION 157

You have a server named Server1 that runs Windows Server 2016.

You need to install the DNS Server role on Server1.

What should you run?

- A. the **Add-WindowsPackage** cmdlet
- B. the **dnscmd.exe** command
- C. the **optionalfeatures.exe** command
- D. the **Add-WindowsFeature** cmdlet
- E. the **dnscmd.exe** command
- F. the **dns.exe** command

**Correct Answer:** D

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

The Add-WindowsFeature cmdlet installs one or more roles, role services, or features on either the local or a specified remote server that is running Windows Server 2008 R2. This cmdlet has been replaced by the Install-WindowsFeature cmdlet in Windows Server 2012 R2.

References: <https://docs.microsoft.com/en-us/powershell/module/servermanager/install-windowsfeature?view=winserver2012r2-ps>

#### QUESTION 158

You have a server named Server1. Server1 contains a drive named D that has Data Deduplication enabled.

You delete 1 TB of files from drive D.

You need to ensure that you can use all the disk space that was used by the deleted files as soon as possible.

What should you run?

- A. the **BackgroundOptimization** task from the Task Scheduler
- B. the **WeeklyScrubbing** task from the Task Scheduler
- C. the `Start-DedupJob` cmdlet and the `-Type GarbageCollection` parameter
- D. the `Set-DedupVolume` cmdlet
- E. the `Start-DedupJob` cmdlet and the `-Type Optimization` parameter

**Correct Answer: C**

**Section: (none)**

**Explanation**

**Explanation/Reference:**

References: <https://docs.microsoft.com/en-us/powershell/module/deduplication/start-dedupjob?view=win10-ps>

#### QUESTION 159

Your network contains an on-premises Active Directory domain. The domain contains 25 servers that run Windows Server 2016.

You have a hybrid deployment of Microsoft Azure Active Directory (Azure AD).

You plan to manage the servers by using Windows Admin Center.

You install Windows Admin Center on one of the servers.

You need to ensure that connections to Windows Admin Center are authenticated by using multi-factor authentication (MFA).

What should you do first?

- A. Install an extension to Windows Admin Center
- B. Configure Allowed groups
- C. Register the gateway to Azure AD
- D. Import a certificate by using Windows Admin Center

**Correct Answer:** C

**Section:** (none)

**Explanation**

**Explanation/Reference:**

References:

<https://docs.microsoft.com/en-us/windows-server/manage/windows-admin-center/configure/user-access-control>

#### QUESTION 160

You have a server named Server1 that runs Windows Server 2016. Server1 contains a volume named D. Volume D contains the folders shown in the following table.

Name	Size	Description
Folder1	200 GB	Contains Microsoft Word documents and PowerPoint presentations that are encrypted by using EFS
Folder2	200 GB	Contains several VHDX files that contain installations of Windows 10
Folder3	200 GB	Contains uncompressed BMP images
Folder4	200 GB	Application source files for different versions of Microsoft Office

You enable Data Deduplication.

Which folder will benefit the least from Data Deduplication?

- A. Folder2
- B. Folder3

- C. Folder1
- D. Folder4

**Correct Answer:** C

**Section:** (none)

**Explanation**

**Explanation/Reference:**

References:

<https://docs.microsoft.com/en-us/windows-server/storage/data-deduplication/overview>

#### QUESTION 161

You have a server named Server1. Server1 contains a volume that has Data Deduplication enabled.

You need to reduce the amount of memory allocated to the Data Deduplication process.

Which cmdlet should you run?

- A. **Enabled-DedupVolume**
- B. **Update-Dedupstatus**
- C. **Set-DedupVolume**
- D. **Set-DedupSchedule**

**Correct Answer:** D

**Section:** (none)

**Explanation**

**Explanation/Reference:**

References: <https://docs.microsoft.com/en-us/windows-server/storage/data-deduplication/advanced-settings> <https://docs.microsoft.com/en-us/powershell/module/deduplication/set-dedupschedule?view=win10-ps>

#### QUESTION 162

You have a Hyper-V cluster that uses Cluster Shared Volumes (CSV). The cluster contains 20 virtual machines. Each virtual machine has a single disk.

You create a storage QoS policy that sets the minimum IOPS to 100 and the maximum IOPS to 200.

You need to ensure that the storage traffic of each virtual machine complies with the storage QoS policy.

<https://vceplus.com/>

What should you run?

- A. **Set-VMHardDiskDrive**
- B. **Set-VM**
- C. **Set-VMHost**
- D. **Set-VHD**

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

References: <https://docs.microsoft.com/en-us/powershell/module/hyper-v/set-vmhardddiskdrive?view=win10-ps>

#### **QUESTION 163**

You need to capture a Windows Server 2016 Datacenter image to a WIM file. The solution must exclude the C:\Windows.old folder.

Which two actions should you perform? Each correct answer presents part of the solution.

**NOTE:** Each correct selection is worth one point.

- A. Run Windows Configuration Designer and select the **Advanced provisioning** option
- B. Create a text file that contains an [ExclusionException] section
- C. Create a text file that contains an [ExclusionList] section
- D. Run dism.exe and specify the /ConfigFile parameter
- E. Run dism.exe and specify the /Scratchdir parameter
- F. Create a text file that contains an [CompressionExclusionList] section

**Correct Answer:** CD

**Section:** (none)

**Explanation**

**Explanation/Reference:** References: <https://docs.microsoft.com/en-us/windows-hardware/manufacture/desktop/dism-image-management-command-line-options-s14> <https://docs.microsoft.com/en-us/windows-hardware/manufacture/desktop/dism-configuration-list-and-wimscriptini-files-winnext>

**QUESTION 164**

You have a five-node failover cluster named Cluster1. All the nodes run Windows Server 2012 R2. All the nodes run on physical hardware.

You need to upgrade Cluster1 to Windows Server 2016. The solution must minimize administrative effort and costs.

What should you do first?

- A. Add a Windows Server 2016 node to Cluster1
- B. Create a new Windows Server 2016 failover cluster
- C. Enable Cluster-Aware updating (CAU) on Cluster1
- D. Drain and evict a node from Cluster1

**Correct Answer:** D

**Section:** (none)

**Explanation**

**Explanation/Reference:**

<https://docs.microsoft.com/en-us/windows-server/failover-clustering/upgrade-option-same-hardware>

**QUESTION 165**

You have three servers named Server1, Server2, and Server3. The servers are members of a Network Load Balancing (NLB) cluster named Cluster1.

You need to configure the handling priority for the traffic on port 443.

What should you do in Network Load Balancing Manager?

- A. From the cluster properties, configure the host priority
- B. From the host properties, configure the Filtering mode of a port rule
- C. From the host properties, configure the host priority
- D. From the cluster properties, configure the Filtering mode of a port rule

**Correct Answer:** A

**Section:** (none)

**Explanation**

**Explanation/Reference:**

#### QUESTION 166

You have a Hyper-V host named HV1 that runs Windows Server 2016. HV1 is a guarded host that is part of a guarded fabric. HV1 receives updates through the Semi-Annual Channel.

HV1 hosts the virtual machines shown in the following table.

Name	Operating system	Configuration
VM1	Windows Server 2012 R2	Generation 1 BitLocker Drive Encryption (BitLocker)-protected
VM2	Windows Server 2012 R2	Generation 2 Shielded virtual machine
VM3	Windows Server 2016	Generation 1 BitLocker Drive Encryption (BitLocker)-protected
VM4	Windows 10	Generation 2

HV1 has the virtual switches shown in the following table.

Name	Connection type	Virtual machines attached to the switch
SW1	External	VM3
SW2	Internal	VM2, VM4
SW3	Private	VM1

All the virtual machines are running and are joined to the same domain.

To which virtual machine can you connect by using PowerShell Direct?

- A. only VM1 and VM3
- B. only VM2 and VM4

- C. only VM3 and VM4
- D. VM1, VM2, VM3, and VM4

**Correct Answer:** C

**Section:** (none)

**Explanation**

**Explanation/Reference:**

References: <https://docs.microsoft.com/en-us/virtualization/hyper-v-on-windows/user-guide/powershell-direct>

#### **QUESTION 167**

You have a server named Server1 that runs Windows Server 2016.

You install the Server for NFS server role on Server1.

You need to ensure that you can create NFS shares on Server1 by using the **NFS Share – Advanced** share profile.

Which additional server role should you install?

- A. File Server VSS Agent Service B. Work Folders
- C. File Server Resource Manager
- D. Print and Document Services

**Correct Answer:** C

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Explanation:

Enable the File Server Resource Manager role if you want use some advance features of NFS
