Microsoft 70-697

Configuring Windows Devices

Sections
1. Manage identity
2. Plan desktop and device deployment
3. Plan and implement a Microsoft Intune device management solution
4. Configure networking
5. Configure storage
6. Manage data access and protection
7. Manage remote access
8. Manage apps
9. Manage updates and recovery
10. Mixed Questions

Exam A

QUESTION 1
You plan to deploy a Microsoft Azure RemoteApp collection by using a custom template image. The image will contain Microsoft Office 365 ProPlus apps.

You need to ensure that multiple users can run Office 365 ProPlus from the custom template image simultaneously.

What should you include in the configuration file?

A. <Property Name = "FORCEAPPSHUTDOWN" Value = "FALSE" />

B. <Product ID = "0365ProPlusRetail" />

C. <Property Name = "SharedComputerLicensing" Value = "1" />

D. <Property Name = "AUTOACTIVATE" Value = "1" />

Correct Answer: C
Section: Manage apps
Explanation

Explanation/Reference:
Explanation:
To make Microsoft Office 365 ProPlus apps available as RemoteApps, you need to enable Shared computer activation. You do this by including the following text in the configuration file:
<Property Name = "SharedComputerLicensing" Value = "1" />

Shared computer activation lets you to deploy Office 365 ProPlus to a computer in your organization that is accessed by multiple users. For example, several nurses at a hospital connect to the same remote server to use their applications or a group of workers share a computer at a factory.
The most common shared computer activation scenario is to deploy Office 365 ProPlus to shared computers by using Remote Desktop Services (RDS). By using RDS, multiple users can connect to the same remote computer at the same time. The users can each run Office 365 ProPlus programs, such as Word or Excel, at the same time on the remote computer.

References: https://technet.microsoft.com/en-us/library/dn782858.aspx

QUESTION 2
HOTSPOT
You have a server that runs Windows Server 2012 R2 server named Server1. Server1 has Remote Desktop Services (RDS) installed. You create a session collection named Session1 and publish a RemoteApp in Session1.

Server1 has an application named App1. The executable for App1 is C:\Apps\App1.exe.

You need to ensure that App1 is available as a RemoteApp in Session1.

What command should you run? To answer, select the appropriate options in the answer area.

Hot Area:

Answer Area

| Get-RDRemoteApp |
| New-RDRemoteApp |
| Set-RDRemoteApp |
| Set-RDSessionCollectionConfiguration |

| -CollectionName |
| -InformationVariable |
| -UserGroup |

"Session1" –DisplayName "App1"

| -FilePath |
| -FileVirtualPath |
| -RequiredCommandLine |
| -ShowInWebAccess |

"C:\Apps\App1.exe"

Correct Answer:

Answer Area

| Get-RDRemoteApp |
| New-RDRemoteApp |
| Set-RDRemoteApp |
| Set-RDSessionCollectionConfiguration |

| -CollectionName |
| -InformationVariable |
| -UserGroup |

"Session1" –DisplayName "App1"

| -FilePath |
| -FileVirtualPath |
| -RequiredCommandLine |
| -ShowInWebAccess |

"C:\Apps\App1.exe"

Section: Manage apps
Explanation

Explanation/Reference:
Explanation:
We need to publish App1 as a RemoteApp. We do this with the New-RDRemoteApp cmdlet.
The –CollectionName parameter allows us to specify the session as "Session1". The display name for the App1 will be "App1".
The –FilePath parameter allows us to specify the path to the executable for App1.

References:
https://technet.microsoft.com/en-us/library/jj215450.aspx

QUESTION   3
DRAG DROP
You plan to deploy a Microsoft Azure RemoteApp collection by using a custom template image. The image will contain Microsoft Word and Excel Office 365 ProPlus programs.

You need to install the Word and Excel programs. The solution must minimize the amount of Internet traffic used during installation.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

Download the Office Deployment Tool.

Modify the Click-to-Run for Office 365 Configuration.xml file.

Run **setup.exe /configure**.

Download Office 365 Deployment Readiness Tool.

Run **setup.exe /packager**.

Run **setup.exe /download**.

Answer Area

Correct Answer:

Actions

Download Office 365 Deployment Readiness Tool.

Run **setup.exe /packager**.

Answer Area

Download the Office Deployment Tool.

Modify the Click-to-Run for Office 365 Configuration.xml file.

Run **setup.exe /download**.

Run **setup.exe /configure**.

Section: Manage apps
Explanation

Explanation/Reference:
Explanation:
The first step is to download the Office Deployment Tool.
You then need to modify the configuration file. This will be used to specify the installation options for Word and Excel.
You then run Setup.exe from the Office Deployment Tool with the /download option to download the required software based on the options in the configuration file. The final step is to install Word and Excel by running Setup.exe from the Office Deployment Tool with the /configure option to install the required software based on the options in the configuration file.

References:
http://blogs.technet.com/b/odsupport/archive/2014/07/11/using-the-office-deployment-tool.aspx
https://technet.microsoft.com/library/Dn782858.aspx

QUESTION 4
You are a system administrator for a department that has Windows 10 Enterprise computers in a domain configuration.

You deploy an application to all computers in the domain.

You need to use group policy to restrict certain groups from running the application.

What should you do?

A. Set up DirectAccess.
B. Configure AppLocker.
C. Disable BitLocker.
D. Run the User State Management Tool.

Correct Answer: B
Section: **Manage**   **apps**
Explanation

Explanation/Reference:
Explanation:
AppLocker is a feature in Windows Server 2012, Windows Server 2008 R2, Windows 8, and Windows 7 that advances the functionality of the Software Restriction Policies feature. AppLocker contains new capabilities and extensions that reduce administrative overhead and help administrators control how users can access and use files, such as executable files, scripts, Windows Installer files, and DLLs.
AppLocker rules can be applied to security groups. We can use a group policy to apply AppLocker rules to the security groups to prevent them from running the application.

References: https://technet.microsoft.com/en-
us/library/ee619725(v=ws.10).aspx#BKMK_WhatRruleConditions

QUESTION 5
You support desktop computers and tablets that run Windows 8 Enterprise. All of the computers are able to connect to your company network from the Internet by using DirectAccess.

Your company wants to deploy a new application to the tablets. The deployment solution must meet the following requirements:

▪ The application is able to access files stored on an internal solid-state drive (SSD) on the tablets.
▪ The application is isolated from other applications.
▪ The application uses the least amount of disk space on the tablet.

You need to deploy the new application to the tablets.

What should you do?

A. Deploy the application as an Application Virtualization (App-V) package. Install the App-V 4.6 client on the tablets.
B. Deploy the application as a published application on the Remote Desktop server. Create a Remote Desktop connection on the tablets.
C. Install the application on a local drive on the tablets.

D. Install the application in a Windows To Go workspace.
E. Install Hyper-V on tablets. Install the application on a virtual machine.
F. Publish the application to Windows Store.
G. Install the application within a separate Windows 8 installation in a virtual hard disk (VHD) file. Configure the tablets with dual boot.
H. Install the application within a separate Windows 8 installation in a VHDX file. Configure tablets with dual boot.

Correct Answer: B
Section: Manage   apps
Explanation

Explanation/Reference:
Explanation:
Deploying the application as a published application on the Remote Desktop server will use no disk space on the tablets. Users will be able to access the application by using Remote Desktop Connections. This will also ensure that the application is isolated from other applications on the tablets.
We can use Remote Desktop Connection 'redirection' to ensure that the application is able to access files stored on an internal solid-state drive (SSD) on the tablets. Redirection enables access to local resources such as drives, printers etc. in a Remote Desktop Connection.

References: https://azure.microsoft.com/en-gb/documentation/articles/remoteapp-
redirection/

QUESTION 6
You have a computer named Computer1 that runs Windows 10 Enterprise. Computer1 is a member of an Active Directory domain named contoso.com.

You have a line-of-business universal app named App1. App1 is developed internally.

You need to ensure that you can run App1 on Computer1. The solution must meet the following requirements:

▪ Minimize costs to deploy the app.
▪ Minimize the attack surface on Computer1.

What should you do?

A. Have App1 certified by the Windows Store.
B. Sign App1 with a certificate issued by a third-party certificate authority.
C. From the Update & Security setting on Computer1, enable the **Sideload apps** setting.
D. Run the **Add-AppxProvisionedPackage** cmdlet.

Correct Answer: C
Section: Manage apps
Explanation
Explanation/Reference:
Explanation:
To install the application, you need to 'Sideload' it. First you need to enable the **Sideload apps** setting.
LOB Windows Store apps that are not signed by the Windows Store can be sideloaded or added to a PC in the enterprise through scripts at runtime on a per-user basis. They can also be provisioned in an image by the enterprise so that the app is registered to each new user profile that's created on the PC. The requirements to sideload the app per-user or in the image are the same, but the Windows PowerShell cmdlets you use to add, get, and remove the apps are different.
Before you can sideload LOB Windows Store apps that are not signed by the Windows Store, you will need to configure the PC.

References: https://msdn.microsoft.com/en-
us/library/hh454036.aspx

QUESTION 7
You have a computer named Computer1 that runs Windows 10 Enterprise.

You plan to install the most recent updates to Computer1.

You need to ensure that you can revert to the current state of Computer1 in the event that the computer becomes unresponsive after the update.

What should you include in your solution?

A. The **Reset this PC** option from the Recovery section of the Settings app
B. The **Sync your settings** options from the Accounts section of the Settings app
C. The Backup and Restore (Windows 7) control panel item
D. The **Refresh your PC** option from the PC Settings

Correct Answer: C
Section: Manage updates and recovery Explanation

Explanation/Reference:
Explanation:

The question states that you need to ensure that you can revert to the current state of Computer1. The question does not specify what exactly the current state is in terms of software configuration but it would be safe to assume that Computer1 has Windows Store Apps installed, desktop applications installed and some previous Windows Updates installed.

The only way to recover the computer to its 'current' state is to perform a full backup of the computer before updating it. Then if the computer becomes unresponsive after the update, we can simply restore the backup to return the computer to its state at the time of the backup.

References:
http://www.howtogeek.com/220986/how-to-use-all-of-windows-10%E2%80%99s-backup-and-recovery-tools/

QUESTION 8
You administer a Windows 10 Enterprise computer. The computer has File History turned on, and system protection turned on for drive C.

You accidentally delete a folder named Libraries\Customers by using the Shift+Delete keyboard shortcut.

You need to restore the most recent version of the folder to its original location.

Which approach should you use to restore the folder?

A. Recycle Bin
B. the latest restore point
C. File History
D. a manually selected restore point

Correct Answer: C
Section: Manage updates and recovery Explanation

Explanation/Reference:
Explanation:
File History is similar to Previous Versions in previous versions of Windows. It takes regular backups of your data and saves them to a separate disk volume or external drive. When File History is enabled, it backs up all the system libraries and your custom libraries by default.
To restore a deleted folder, you can browse to the parent folder or library and select Restore Previous Versions. The Previous Versions tab will list the previous versions that can be restored to its original location or restored to an alternative location.

References: https://www.winhelp.us/file-history-in-windows-8.html
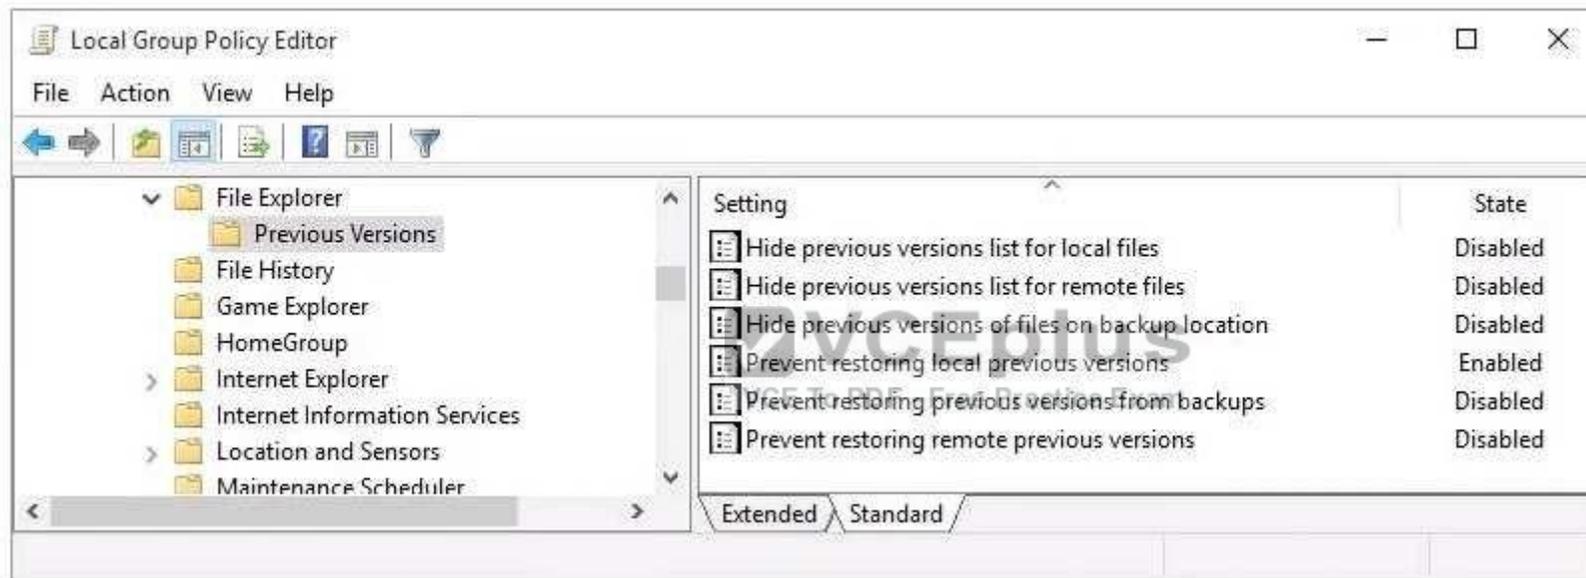

QUESTION 9
HOTSPOT
You have a standalone computer that runs Windows 10 Enterprise. The computer is configured to automatically back up files by using File History. The user of the computer uses the OneDrive desktop app to sync files.

The Previous Versions settings from the local group policy of the computer are shown in the following graphic.

Local Group Policy Editor

File   Action   View   Help

Setting	State
Hide previous versions list for local files	Disabled
Hide previous versions list for remote files	Disabled
Hide previous versions of files on backup location	Disabled
Prevent restoring local previous versions	Enabled
Prevent restoring previous versions from backups	Disabled
Prevent restoring remote previous versions	Disabled

File Explorer
  Previous Versions
  File History
  Game Explorer
  HomeGroup
  Internet Explorer
  Internet Information Services
  Location and Sensors
  Maintenance Scheduler

Extended \ Standard

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

If a user deletes a file from OneDrive by using File Explorer, the file **[answer choice]**.

cannot be restored	
can be restored from onedrive.com	
can be restored by using the Previous Versions tab	

If a user deletes a file from a local drive by using File Explorer, the file **[answer choice]**.

cannot be restored	
can be restored from onedrive.com	
can be restored by using Previous Versions tab	

Correct Answer:

Answer Area

If a user deletes a file from OneDrive by using File Explorer, the file **[answer choice]**.

cannot be restored	
can be restored from onedrive.com	
can be restored by using the Previous Versions tab	

If a user deletes a file from a local drive by using File Explorer, the file **[answer choice]**.

cannot be restored	
can be restored from onedrive.com	
can be restored by using Previous Versions tab	

Section: Manage updates and recovery Explanation

Explanation/Reference:
Explanation:
When a file is deleted from the local OneDrive folder with File Explorer, the deletion is replicated to Onedrive.com and the file is moved to the OneDrive recycle bin.
The deleted file can therefore be recovered from the Recycle Bin on Onedrive.com.

If a user deletes a file from a local drive by using File Explorer, the file cannot be restored. If the file is not in the OneDrive folder, it will not be a file that is synced to onedrive.com. We could use Previous Versions to restore the file but this is prevented by the Group Policy settings. The "Prevent restoring local previous versions" – Enabled group policy setting would prevent the previous version from being restored.

References: http://www.groovypost.com/howto/restore-deleted-files-local-onedrive-folder/

QUESTION 10
You have a Windows 10 Enterprise computer named Computer1. Computer1 has File History enabled.

You create a folder named Folder1 in the root of the C: drive.

You need to ensure that Folder1 is protected by File History.

What are two possible ways to achieve the goal? Each correct answer presents a complete solution.

A. From File Explorer, include Folder1 in an existing library.
B. Modify the Advanced settings from the File History Control Panel item.
C. From the Settings app, modify the Backup options.
D. From File Explorer, modify the system attribute of Folder1.

Correct Answer: AC
Section: Manage updates and recovery Explanation

Explanation/Reference:
Explanation:
By default, File History backs up all libraries. We can therefore ensure that Folder1 is protected by File History by adding the folder to a library.
The second method of ensuring that Folder1 is protected by File History is to add the folder location to File History. You do this by modifying the Backup options, not the File History Control Panel item as you might expect. In the Settings app, select Update & Security then Backup. Under the Back up using File History heading, select the Add a drive option.

References: https://www.winhelp.us/file-history-in-windows-8.html

QUESTION 11
You have a computer named Computer1 that runs Windows 10 Enterprise. Computer1 is configured to receive Windows updates from the Internet.

If a user is logged on to Computer1, you need to prevent Computer1 from automatically restarting without the logged on user's consent after the installation of the Windows updates.

What should you do?

A. Enable the **Defer upgrades** setting.
B. Edit the Automatic App Update scheduled task.

C. Configure the **Choose how updates are delivered** setting.

D. Configure the **Choose how updates are installed** setting.

Correct Answer: D
Section: Manage updates and recovery Explanation

Explanation/Reference:
Explanation:
In the **Choose how updates are installed** setting, you can use the drop-down menu to choose an option:
▪ Schedule a restart
▪ Automatically restart
The Schedule a restart option will allow the user to choose when the computer is restarted. Of the answers given, this is the only way to prevent Computer1 from automatically restarting without the logged on user's consent after the installation of the Windows updates.

References: http://windows.microsoft.com/en-gb/windows-10/getstarted-choose-how-updates-are-installed

QUESTION   12
HOTSPOT
You have a computer that runs Windows 10 Enterprise that has a local group policy as shown in the following graphic.

Local Group Policy Editor

File   Action   View   Help

Setting	State
Allow Automatic Updates immediate installation	Not configured
Allow non-administrators to receive update notifications	Not configured
Allow signed updates from an intranet Microsoft update service location	Not configured
Always automatically restart at the scheduled time	Enabled
Automatic Updates detection frequency	Enabled
Configure Automatic Updates	Enabled
Defer Upgrade	Not configured
Delay Restart for scheduled installations	Not configured
Do not adjust default option to 'Install Updates and Shut Down' in Shut Down Windows dialog box	Not configured
Do not connect to any Windows Update Internet locations	Enabled
Do not display 'Install Updates and Shut Down' option in Shut Down Windows dialog box	Not configured
Enable client-side targeting	Enabled
Enabling Windows Update Power Management to automatically wake up the system to install scheduled updates	Not configured
No auto-restart with logged on users for scheduled automatic updates installations	Enabled
Re-prompt for restart with scheduled installations	Not configured
Reschedule Automatic Updates scheduled installations	Not configured
Specify intranet Microsoft update service location	Enabled
Turn on recommended updates via Automatic Updates	Not configured
Turn on Software Notifications	Enabled

Extended   Standard

19 setting(s)

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Windows updates will be downloaded from [answer choice].

	▼
Windows Server Update Services only	
Microsoft Windows Update servers only	
Windows Server Updates Services and Microsoft Windows Update servers	

If a user is logged into the computer and an update requires a restart, the computer will [answer choice].

	▼
restart when the user signs out	
restart within a maximum delay of 3 hours	
restart within a maximum delay of 3 days	

Correct Answer:

Answer Area

Windows updates will be downloaded from [answer choice].

	▼
Windows Server Update Services only	
Microsoft Windows Update servers only	
Windows Server Updates Services and Microsoft Windows Update servers	

If a user is logged into the computer and an update requires a restart, the computer will [answer choice].

	▼
restart when the user signs out	
restart within a maximum delay of 3 hours	
restart within a maximum delay of 3 days	

Section: Manage updates and recovery Explanation

Explanation/Reference:
Explanation:

Windows Updates will be downloaded from Windows Server Update Services only. This is determined by the "Specify Intranet Microsoft Update Service Location" setting and the "Do not connect to any Windows Update Internet locations" setting both being 'Enabled'.
In the "Specify Intranet Microsoft Update Service Location" setting, you can specify the name of the Windows Server Updates Services server.

If a user is logged into the computer and an update requires a restart, the computer will restart when the user signs out. This is determined by the "No auto-restart with logged on users for schedule automatic updates" setting being enabled. This group policy setting creates a registry key named NoAutoRebootWithLoggedOnUsers and sets the value of the key to 1 (enabled).

With this setting enabled, you should be aware that the computer should be restarted at the earliest opportunity in order to complete the installation of the Windows Updates.

QUESTION 13
You use a Windows 8.1 tablet. The tablet receives Windows Update updates automatically from the Internet.

The tablet has Wi-Fi and is connected to a 3G mobile broadband Wi-Fi hot spot.

You need to minimize data usage while connected to this hot spot.

What should you do?

A. Turn on Airplane Mode.
B. Disable **File and Print Sharing** for mobile broadband connections.
C. Configure the interface metric of IP settings for Wi-Fi connection as **1**.
D. Edit the **Inbound Rule of Windows Firewall**, and then disable Internet Control Message Protocol (ICMP) traffic.
E. Configure the broadband connection as a metered network.

Correct Answer: E
Section: Manage updates and recovery
Explanation

Explanation/Reference:
Explanation:
You can limit the bandwidth used by the broadband connection by configuring it as a metered network. A metered network is a network where data downloaded is 'metered' (measured) and you are charged for the amount of data downloaded.
Setting a connection as metered prevents Windows from automatically using bandwidth in a number of ways including the following:
▪ **Disables automatic downloading of Windows updates:** Windows won't automatically download updates from Windows Update on metered Internet connections. You'll get a "Download" button you can click whenever you want to install updates.
▪ **Disables automatic downloading of app updates:** The Windows Store won't automatically download updates for your installed "Store apps" on metered connections, either. Desktop apps like Chrome, Firefox, and others will continue updating themselves normally.
▪ **Tiles may not update:** Microsoft says that the live tiles on your Start menu or Start screen "may" stop updating on a metered connection:

References:

http://www.howtogeek.com/226722/how-when-and-why-to-set-a-connection-as-metered-on-windows-10/

QUESTION 14
A company has client computers that run Windows 10.

The client computer systems frequently use IPSec tunnels to securely transmit data.

You need to configure the IPSec tunnels to use 256-bit encryption keys.

Which encryption type should you use?

A. 3DES
B. DES
C. RSA
D. AES

Correct Answer: D
Section: Mixed Questions
Explanation

Explanation/Reference:
Explanation:
IPSec tunnels can be encrypted by 256-bit AES.

L2TP/IPsec allows multiprotocol trafficto be encrypted and then sent over any medium that supports point-to-point datagram delivery, such as IP or Asynchronous
Transfer Mode (ATM).
The L2TP message is encrypted with one of the following protocols by using encryption keys generated from the IKEnegotiation process: Advanced Encryption
Standard (AES) 256, AES 192, AES 128, and 3DES encryption algorithms.

QUESTION 15
You administer a group of 10 client computers that run Windows 10. The client computers are members of a local workgroup. Employees log on to the client
computers by using their Microsoft accounts.
The company plans to use Windows BitLocker Drive Encryption. You need to back up the BitLocker recovery key.

Which two options can you use? (Each correct answer presents a complete solution. Choose two.)

A. Save the recovery key to a file on the BitLocker-encrypted drive.
B. Save the recovery key in the Credential Store.
C. Save the recovery key to OneDrive.
D. Printthe recovery key.

Correct Answer: CD
Section: Mixed   Questions
Explanation

Explanation/Reference:
Explanation:

C: The Bitlocker recovery key is saved in your OneDrive account in the cloud.
D: The recovery key can be printed.

References:https://support.microsoft.com/en-us/help/17133/windows-8-bitlocker-recovery-keys-frequently-asked-questions

QUESTION 16
You are using sysprep to prepare a system for imaging.

You want to reset the security ID (SID) and clear the event logs.

Which option should you use?

A. /generalize
B. /oobe
C. /audit
D. /unattend

Correct Answer: A
Section: Mixed Questions
Explanation

Explanation/Reference:
Explanation:

Generalize prepares the Windows installation to be imaged.
If this option is specified, all unique system information is removed from the Windows installation. The security ID (SID) resets, any system restore points are cleared, and event logs are deleted.
The next time the computer starts, the specialize configuration pass runs. A new security ID (SID) is created, and the clock for Windows activation resets, if the clock has not already been reset three times.

QUESTION 17
Group Policy is a set of rules which control the working environment of user accounts and computer accounts. Group Policy provides the centralized management and configuration of operating systems, applications and users' settings in an Active Directory environment.

In other words, Group Policy in part controls what users can and can't do on a computer system.

Which one of these policies requires a reboot?

A. Turn off Windows Defender
B. Turn off Autoplay for non-volume devices
C. Disable Active Desktop
D. Turn off Data Execution Prevention for Explorer

Correct Answer: D
Section: **Mixed** **Questions**
Explanation

Explanation/Reference:
Explanation:

A reboot is REQUIRED when turning off Data Execution Prevention (DEP) for Explorer.

QUESTION 18
Which term is used to refer to installing apps directly to a device without going through the Windows Store?

A. SQL Injection
B. BranchCache
C. DLL Hijack
D. Sideloading

Correct Answer: D
Section: **Mixed** **Questions**
Explanation

Explanation/Reference:
Explanation:
When you sideload an app, you deploy a signed app package to a device. You maintain the signing, hosting, and deployment of these apps, instead of installing the apps from Windows Store.

QUESTION 19
DRAG DROP
A company has a main office located in Miami, and brach offices in Boston, Los Angeles and Portland. The Office Networks are configured as described in the following table.

City	Network
Boston	10.30.0.0/24
Los Angeles	10.40.0.0/24
Miami	10.10.0.0/16
Portland	10.20.0.0/16

A management computer in the main office, named COMPUTER1, runs windows 8 and several third-party management applications.
– Ensure that only users in the Boston office can connect to COMPUTER1 by using http. –
Ensure that only users in the Los Angeles office can connect COMPUTER1 by using https
– Ensure that only users in th Portland office can connect to COMPUTER1 by using FTP.

You are configuring access to COMPUTER1. How should you configure windows firewall?

Select and Place:

| Source network | Answer Area | | | |

Protocol	Source Network	Port Number	IP Type
FTP			
HTTP			
HTTPS			

Source network:
- 10.10.0.0/16
- 10.20.0.0/16
- 10.30.0.0/24
- 10.40.0.0/24

Port number:
- 21
- 22
- 80
- 443

IP type:
- TCP
- UDP

Correct Answer:

	Source network
	10.10.0.0/16
	10.20.0.0/16
	10.30.0.0/24
	10.40.0.0/24

Answer Area

Protocol	Source Network	Port Number	IP Type
FTP	10.20.0.0/16	21	TCP
HTTP	10.30.0.0/24	80	TCP
HTTPS	10.40.0.0/24	443	TCP

Port number

21

22

80

443

IP type

TCP

UDP

Section: Mixed Questions
Explanation Explanation/Reference:
Explanation:

* First Row: 10.20.0.0/16, 21, TCP
The Portland users, on network 10.20.0.0/16, need FTP, which uses TCP port 21.

* Second Row: 10.30.0.0/16, 80, TCP
The Boston users, on network 10.30.0.0/16, need HTTP, which uses TCP port 80.

* Third row:10.40.0.0/16, 443, TCP
The Los Angles users, on network 10.40.0.0/16, need HTTPS, which uses TCP port 443.

References:https://en.wikipedia.org/wiki/List_of_TCP_and_UDP_port_numbers

QUESTION 20
DRAG DROP
You administer Windows 10 Enterprise computers. Your company has a team of technical writers that is preparing technical manuals and help files. The team manager wants to ensure that the technical writers are able to restore any documents that been modified within the last year.

You need to ensure that the technical writers can restore Microsoft Word files to any previous versions for up to one year.

Which three actions should you perform in sequence?

Select and Place:

Actions	Answers
Create a network share, configure NTFS, and then share permissions.	
Turn on System Protection and create a restore point.	
Turn on File History.	
Configure the Keep Saved Versions setting	

Correct Answer:

Actions	Answers
	Create a network share, configure NTFS, and then share permissions.
Turn on System Protection and create a restore point.	Configure the Keep Saved Versions setting
	Turn on File History.

Section: Mixed Questions
Explanation

Explanation/Reference:
Explanation:

We need a NTFS folder.
In the Advanced settings we can configure the Keep Saved Versions settings.
Finally we turn on File History.

QUESTION 21
DRAG DROP
You manage update compliance for Windows 10 desktop computers that are part of a domain. You need to configure new desktops to automatically receive updates from an intranet resource that you manage.

Which three actions should you perform in sequence?

Select and Place:

Actions	Answers
Configure a computer group and put all Windows 8.1 desktops into the OU. Enable client-side targeting in the GPO	
On the desktop computer, run the command gpupdate /force.	
Create a GPO that enables automatic updates. Configure the GPO to use an internal server as the update repository.	
On the desktop, under Update and Recovery, select Install updates automatically (recommeded)	

Correct Answer:

Actions	Answers
Configure a computer group and put all Windows 8.1 desktops into the OU. Enable client-side targeting in the GPO	Create a GPO that enables automatic updates. Configure the GPO to use an internal server as the update repository.
	On the desktop computer, run the command gpupdate /force.
	On the desktop, under Update and Recovery, select Install updates automatically (recommeded)

Section: Mixed   Questions
Explanation

Explanation/Reference:
Explanation:

Box 1: Create a GPO that enables automatic updates through the intranet source.
Box 2: gpupdate /force

The Gpupdate command refreshes local and Active Directory-based Group Policy settings, including security settings. The /force Ignores all processing optimizations and reapplies all settings.
Box 3: Configure the clients to install updates automatically.

QUESTION   22
DRAG DROP
You work for a small company that uses Windows 10 computers. The computers are joined to a homegroup. You want to share an existing folder named Research. It is located in the Documents folder.

You need to give users the ability to change the files in this folder. Which three actions should you perform in sequence?

Select and Place:

Actions		Answers
Under Permission level, choose Read / Write.		
Under Choose People to Share With, add the home group.		
Right-click the Research folder.		
Enable sharing of the Documents folder in the homegroup settings.		
Under Share With, choose HomeGroup (view and edit).		

Correct Answer:

Section: Mixed Questions
Explanation

Explanation/Reference:
Explanation:

Box 1: Righ-click on the Research folder.
Select the folder.
Box 2: Share it with the home group.
Finally we need to change the level of access, which by default is view.
Box 3: Under Share With, choe HomeGroup (View and edit).

QUESTION 23
DRAG DROP
You have a Windows 8 computer. You need to migrate from Windows 8 to Windows 10 while retaining as much data as possible. You load the Windows 10 media into the DVD drive.

Which three actions should you perform next in sequence?

Select and Place:

Actions	Answers
Under installation options, choose Keep personal files.	
Run the Setup.exe file from the DVD.	
Enter the license key.	
Under installation options, choose Windows settings.	

Correct Answer:

Actions	Answers
	Run the Setup.exe file from the DVD.
	Enter the license key.
	Under installation options, choose Keep personal files.
Under installation options, choose Windows settings.	

Section: Mixed Questions
Explanation

Explanation/Reference:
Explanation:

Box 1: Run the Setup.exe file from the DVD.
Launch setup.exe on the DVD drive to start the upgrade process.

Box 2: Enter the license key.
You will be prompted for the licence key.

Box 3: Under the installation, choose Keep personal files.

QUESTION 24
DRAG DROP
You administer Windows 8 Pro computers in your company network. You discover that Sleep, Shut down and Restart are the only options available when you select the Power button as shown in the following exhibit (Click the Exhibit button.)

You need to enable hibernation on the computer.

Which three steps should you perform in sequence?

Select and Place:

Actions	Answers
Change the **When I press the power button** menu settings.	
From the Charm Bar, open **Change PC settings**.	
Select Don't require a password	
Select **What the power button does.**	

Correct Answer:

Actions	Answers
	From the Charm Bar, open **Change PC settings**.
	Select **What the power button does.**
Select Don't require a password	Change the **When I press the power button** menu settings.

Section: Mixed   Questions
**Explanation**

Explanation/Reference:
Explanation:

Box 1: From the Charm Bar, open Change PC settings.
The Settings options of the Charm bar let you quickly tweak your computer's six major settings: WiFi/Network, Volume, Screen, Notifications, Power, and Keyboard/ Language.
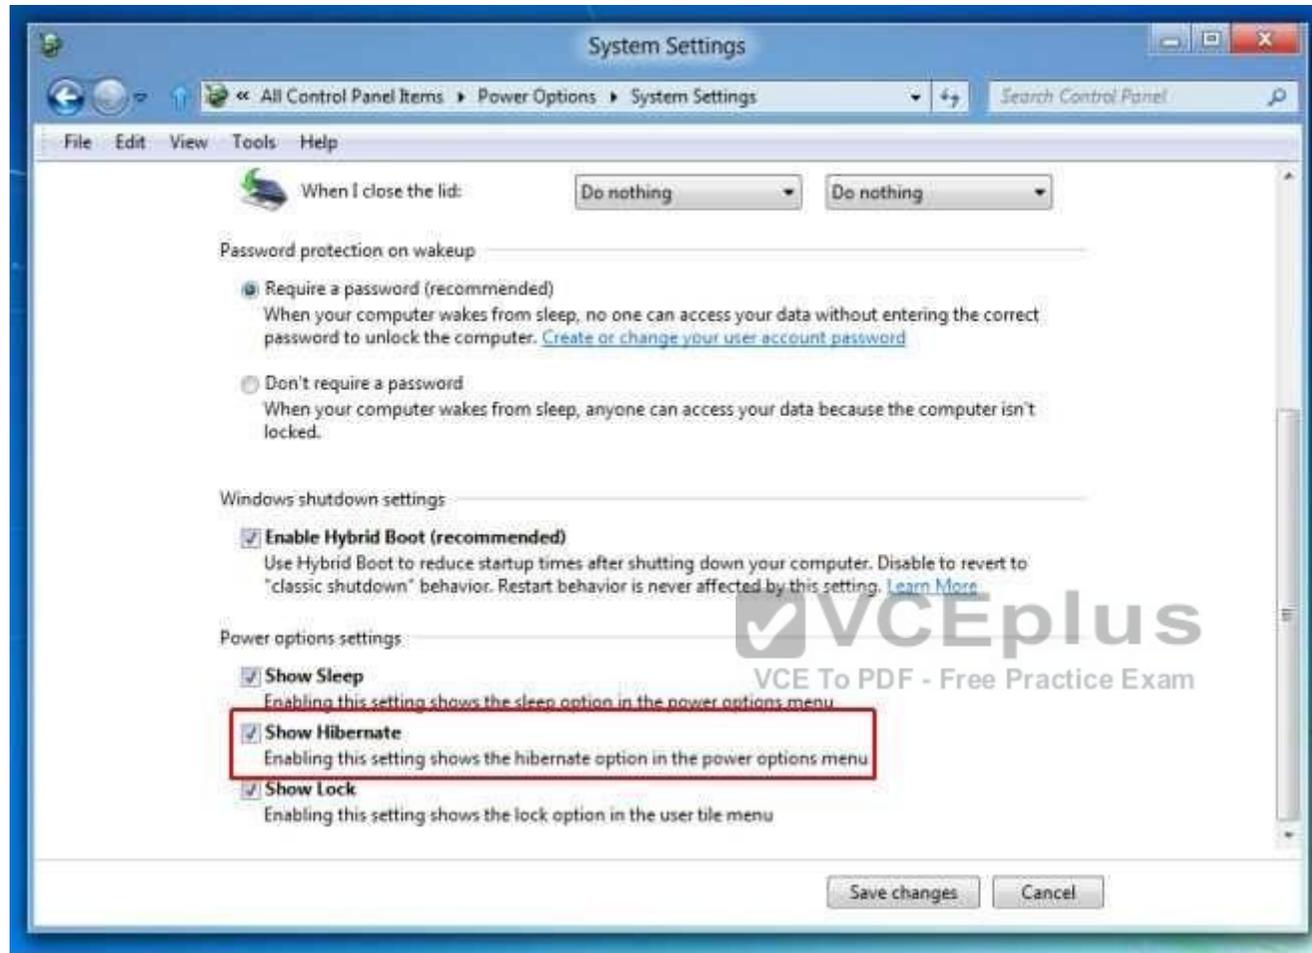

Box 2: Select What the power button does.
In Power options, select Choose what the power button does.

Box 3: Change the When I press the power button menu settings.
Now select the option that says "Change settings that are currently unavailable".
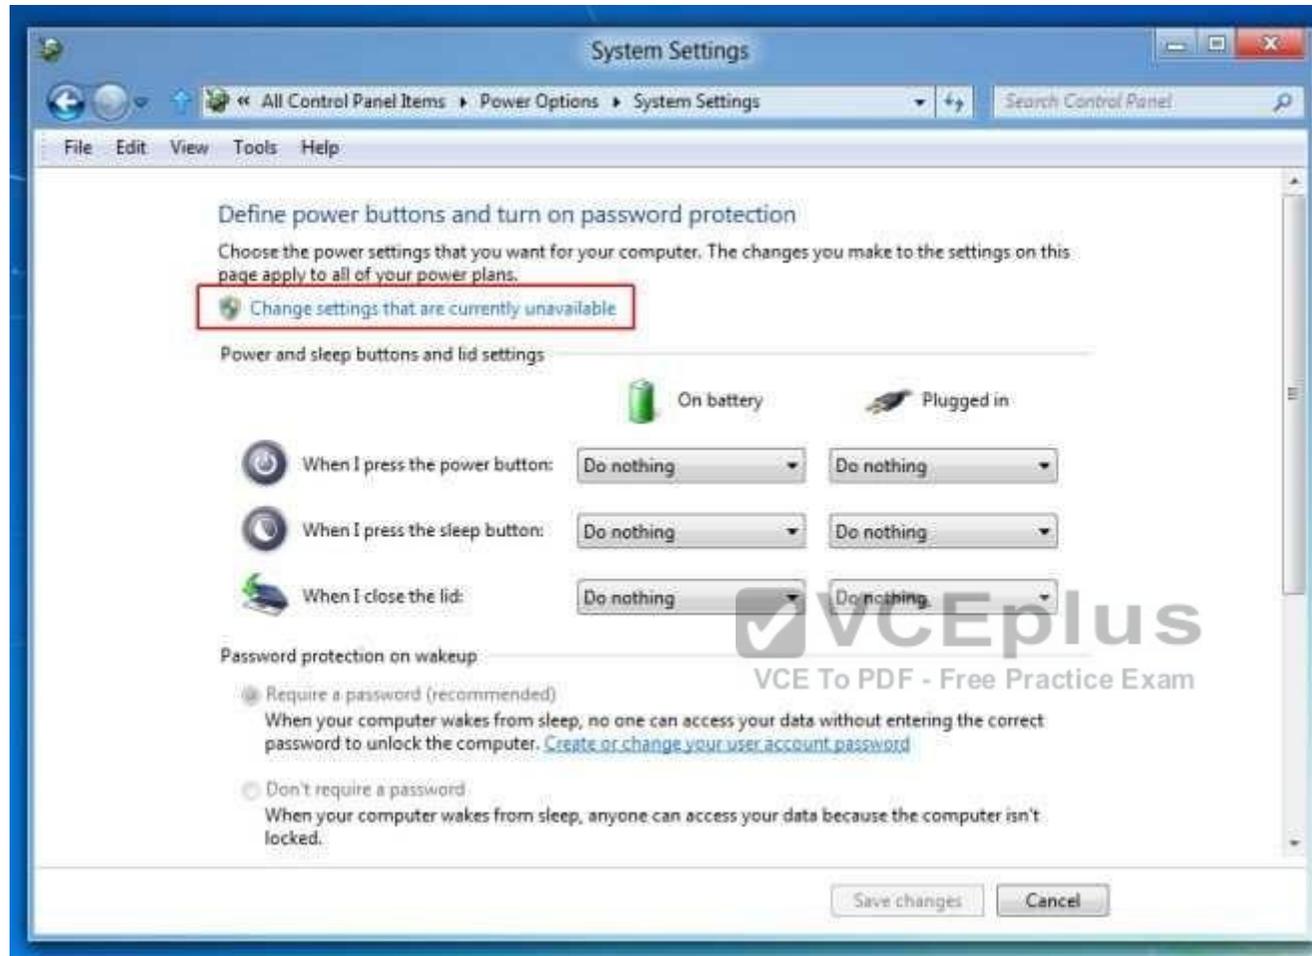

This will provide you with the option to enable Hibernation. Check Show Hibernate option to enable and click Save Changes.

References:http://www.addictivetips.com/windows-tips/how-to-enable-windows-8-hibernate-option/

QUESTION 25
DRAG DROP
You administer 50 laptops that run Windows 7 Professional 32-bit. You want to install Windows 10 Enterprise 64-bit on every laptop. Users will keep their own laptops.

You need to ensure that user application settings, Windows settings, and user files are maintained after Windows 8 Pro is installed.

Which four actions should you perform in sequence?

Select and Place:

	Answer Area

Run the **Scanstate.exe c:\store / i:migdocs.xml /i:migapp.xml /v:13 /c / hardlink /nocompress** command.

Copy the User State Migration Tool (USMT) files and tools to the source computer.

Run the **Scanstate.exe c:\store / i:migdocs.xml /i:migapp.xml /v:13 / c** command.

Install Windows 8 Pro on the existing Windows partition with no formatting or repartitioning. Install standard operating environment applications.

Run the **Loadstate.exe c:\store / i:migdocs.xml /i:migapp.xml /v:13 /c / hardlink /nocompress** command.

Install Windows 8 Pro by deleting all existing partitions and creating a new one. Install standard operating environment applications.

Correct Answer:

	Answer Area
	Copy the User State Migration Tool (USMT) files and tools to the source computer.
	Run the **Scanstate.exe c:\store / i:migdocs.xml /i:migapp.xml /v:13 /c / hardlink /nocompress** command.
Run the **Scanstate.exe c:\store / i:migdocs.xml /i:migapp.xml /v:13 / c** command.	Install Windows 8 Pro by deleting all existing partitions and creating a new one. Install standard operating environment applications.
Install Windows 8 Pro on the existing Windows partition with no formatting or repartitioning. Install standard operating environment applications.	Run the **Loadstate.exe c:\store / i:migdocs.xml /i:migapp.xml /v:13 /c / hardlink /nocompress** command.

Section: Mixed   Questions
Explanation

Explanation/Reference:
Explanation:

Box 1: First we copy the User State Migration Tool to the source computer.

Box 2: Scanstate with /nocompress
The ScanState command is used with the User State Migration Tool (USMT) 5.0 to scan the source computer, collect the files and settings, and create a store.
We use the /nocompress option as the only available loadstate option, in step 4, uses /nocompress.

Box 3: Delete old partitions, and install windows 8 on a new partition.
After you create a migration store on a server, you will install Windows 8 and load the files and settings from that migration store onto the destination computer.
You can reformat the source computer (PC refresh) and use it as your destination computer, or you can use an additional computer (PC replacement).

Box 4: Loadstate
To apply migrated data to your hard drives, you connect the computer to your network, install USMT (this step is missing in this question), and then run LoadState.

References: https://technet.microsoft.com/en-
us/library/hh824873.aspx

QUESTION   26
DRAG DROP
You administer desktop computers that run Windows 8 Enterprise and are members of an Active Directory domain.

A new security policy states that all traffic between computers in the research department must be encrypted and authenticated by using Kerberos V5. You need to configure the requested traffic authentication settings by using Windows Firewall with Advanced Settings.
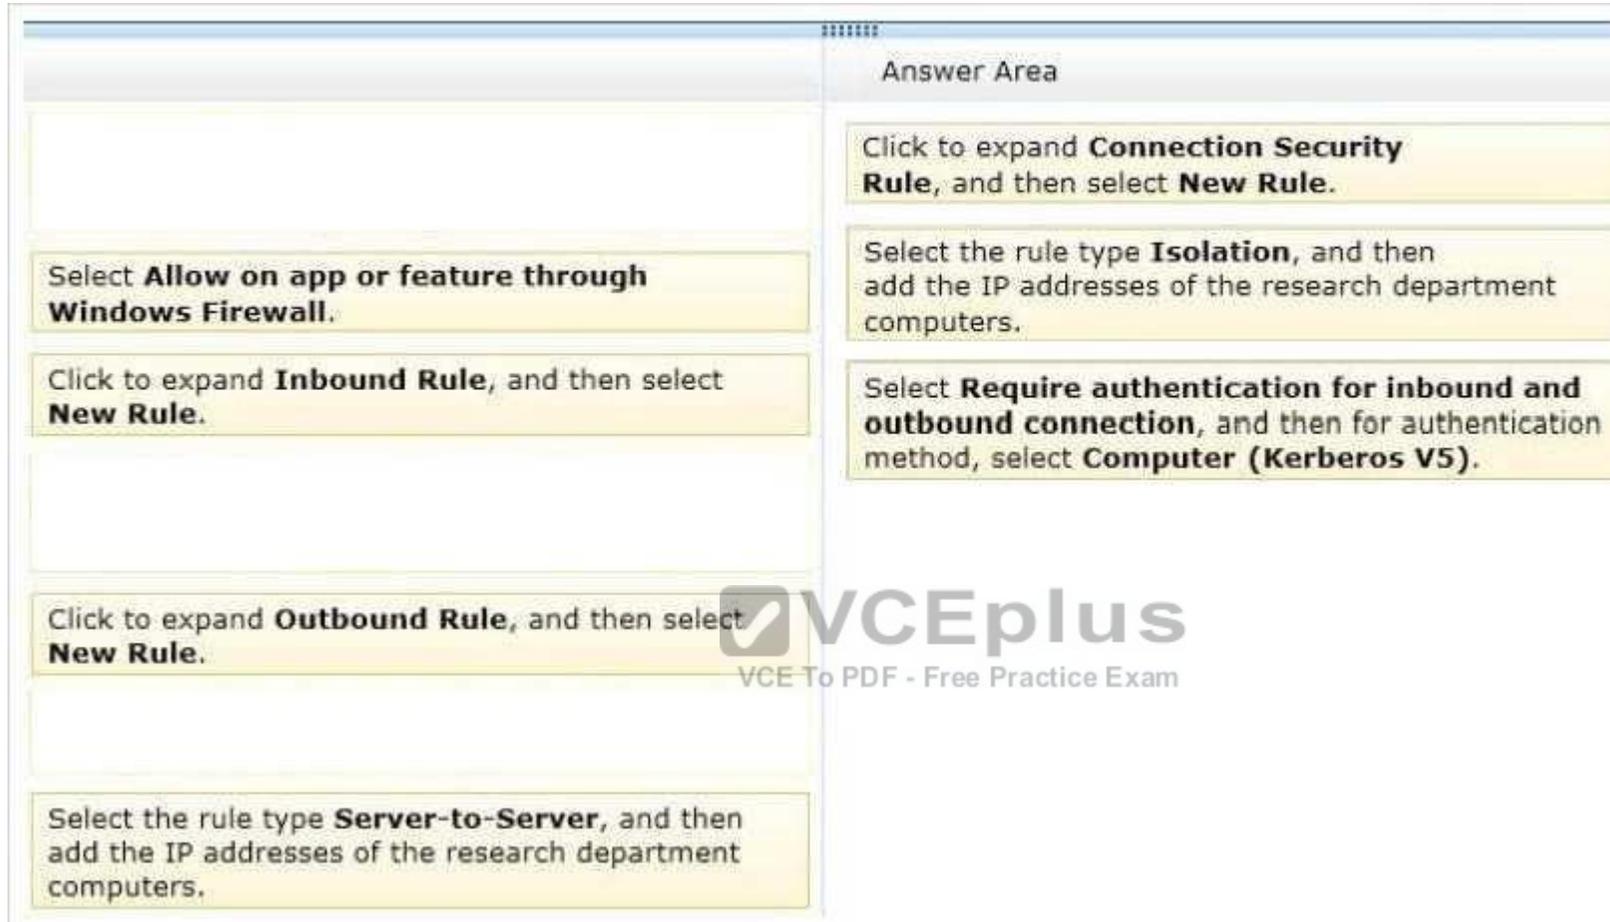

Which three actions should you perform in sequence?

Select and Place:

	Answer Area

Select **Require authentication for inbound and outbound connection**, and then for authentication method, select **Computer (Kerberos V5)**.

Select **Allow on app or feature through Windows Firewall**.

Click to expand **Inbound Rule**, and then select **New Rule**.

Select the rule type **Isolation**, and then add the IP addresses of the research department computers.

Click to expand **Outbound Rule**, and then select **New Rule**.

Click to expand **Connection Security Rule**, and then select **New Rule**.

Select the rule type **Server-to-Server**, and then add the IP addresses of the research department computers.

Correct Answer:

	Answer Area
	Click to expand **Connection Security Rule**, and then select **New Rule**.
Select **Allow on app or feature through Windows Firewall**.	Select the rule type **Isolation**, and then add the IP addresses of the research department computers.
Click to expand **Inbound Rule**, and then select **New Rule**.	Select **Require authentication for inbound and outbound connection**, and then for authentication method, select **Computer (Kerberos V5)**.
Click to expand **Outbound Rule**, and then select **New Rule**.	
Select the rule type **Server-to-Server**, and then add the IP addresses of the research department computers.	

Section: Mixed Questions
Explanation

Explanation/Reference:
Explanation:

- (Step 1) In the Windows Firewall with Advanced Security MMC snap-in, right-click Connection Security Rules, and then click New Rule.
- (Step 2) On the Rule Type page, click Isolation, and then click Next.(The Kerberos option in step 4 below is available only when you specify an Isolation or Custom rule type.)
- On the Requirements page, confirm that Request authentication for inbound and outbound connections selected, and then click Next.

- (Step 3)On the Authentication Method page, click Computer and user (Kerberos V5), and then click Next.
- On the Profile page, clear the Private and Public check boxes, and then click Next.

▪ On the Name page, type Request Inbound Request Outbound, and then click Finish.

QUESTION 27
DRAG DROP
Your network contains an Active Directory domain and 100 Windows 10 Enterprise client computers. All software is deployed by using Microsoft Application Virtualization (App-V) 5.0.
Users are NOT configured as local administrators. Your company purchases a subscription to Microsoft Office 365 that includes Office 365 ProPlus.

You need to create an App-V package for Office 365 ProPlus.

Which three actions should you perform in sequence?

Select and Place:

Actions	Answer Area
Run the App-V Sequencer.	
Download the Office Deployment Tool for Click-to-Run.	
Run **Setup /Download**.	
Run the Office Customization Tool (OCT).	
Run **Setup /Packager**.	
Run **Setup /Admin**.	

Correct Answer:

Actions	Answer Area
Run the App-V Sequencer.	Download the Office Deployment Tool for Click-to-Run.
	Run **Setup /Download.**
Run the Office Customization Tool (OCT).	Run **Setup /Packager.**
Run **Setup /Admin.**	

Section: Mixed Questions
Explanation

Explanation/Reference:
Explanation:

Step 1: First we download the Office Deployment Tool for Click-to Run.
Step 2: We use the tool to download files to create an Office 15 installation with the Run Setup/Download command.
Step 3: Finally we produce the App-V package with by running the Setup /Packager.

The Office Deployment Tool allows the administrator to customize and manage Office 2013 Volume License or Office 365 Click-to-Run deployments.

The Office Deployment Tool Setup runs the following tasks:
Setup /Download – Downloads files to create an Office 15 installation
Setup /Configure – Adds, removes, or configures an Office 15 installation
Setup /Packager – Produces an Office 15 App-V package

QUESTION 28
DRAG DROP
You administer computers that run Windows 8. The computers on your network are produced by various manufacturers and often require custom drivers.

You need to design a recovery solution that allows the repair of any of the computers by using a Windows Recovery Environment (WinRE).
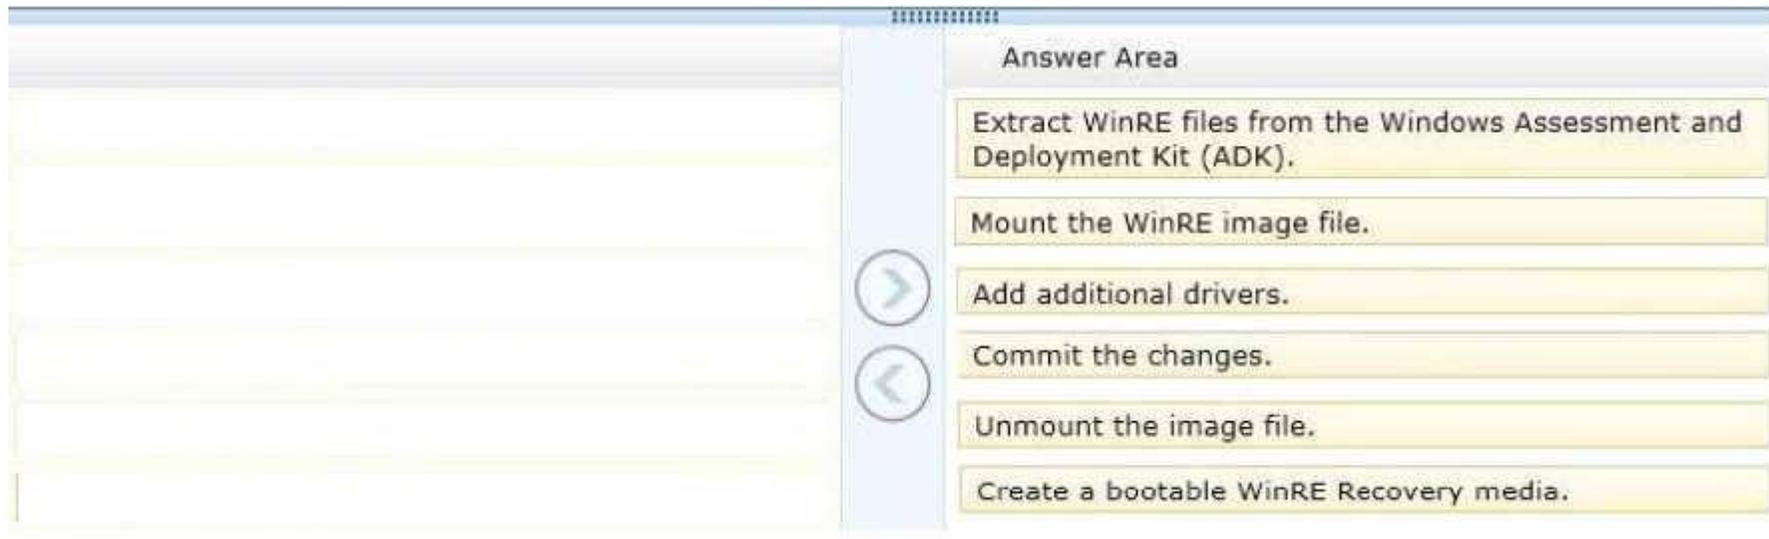

In which order should you perform the actions?

Select and Place:
	Answer Area
Create a bootable WinRE Recovery media.	
Extract WinRE files from the Windows Assessment and Deployment Kit (ADK).	
Unmount the image file.	
Add additional drivers.	
Mount the WinRE image file.	
Commit the changes.	

Correct Answer:

	Answer Area
	Extract WinRE files from the Windows Assessment and Deployment Kit (ADK).
	Mount the WinRE image file.
	Add additional drivers.
	Commit the changes.
	Unmount the image file.
	Create a bootable WinRE Recovery media.

Section: Mixed Questions
Explanation

Explanation/Reference:
Explanation:

- The Windows Assessment and Deployment Kit (Windows ADK) is a collection of tools and documentation that you can use to customize, assess, and deploy Windows operating systems to new computers.

- Walkthrough: Create a Custom Windows PE Image

▪ Step 1: Set Up a Windows PE Build Environment On your technician computer, click Start, point to All Programs, point to Windows OPK or Windows AIK, and then click Windows PE Tools Command Prompt. The menu shortcut opens a Command Prompt window and automatically sets environment variables to point to all the necessary tools. By default, all tools are installed at C:\Program Files\version\Tools, where version can be Windows OPK or Windows AIK. Etc. ▪ Step 2: Mount the Base Windows PE Image

▪ Step 3: Add Boot-Critical Drivers
    - Add Optional Components
    - Add Language Support (Optional)
    - Add More Customization (Optional)

▪ Step 4-5: Commit Changes and unmount the image file. In this step, you commit the changes to the original image file (Winpe.wim) by using the ImageX / unmount option with the /commit option. For example: imagex /unmount c:\winpe_x86\mount /commit

▪ Step 6: You now have a customized Windows PE RAM disk image that you can place on bootable media, like a CD-ROM or a UFD.

QUESTION 29
DRAG DROP
A local printer named PRINTER1 is shared from a client computer named COMPUTER1 that run a 32-bit version of Windows 10. A workgroup contains client computers that run a 64-bit version of Windows 10.

Computers in the workgroup can't currently print to PRINTER1.

You need to ensure that the workgroup computers can print to PRINTER1.

Which three actions should you perform in sequence? To answer, move the appropriate actions to the answer area and arrange them in the correct order.

Select and Place:

Connect the workgroup computers to PRINTER1.

Add the driver on COMPUTER1.

Obtain the 32-bit driver for PRINTER1.

Obtain the 64-bit driver for PRINTER1.

Install the driver on one computer in the workgroup.

Correct Answer:

Obtain the 32-bit driver for PRINTER1.

Install the driver on one computer in the workgroup.

Obtain the 64-bit driver for PRINTER1.

Add the driver on COMPUTER1.

Connect the workgroup computers to PRINTER1.

Section: Mixed Questions
Explanation

Explanation/Reference:
Explanation:

You can very well add a 64-bit printer driver to a local printer on a 32-bit Windows operating system.
After the 64-bit driver has been added connect the 64-bit Windows 10 computers to the printer.

References:https://support.microsoft.com/en-us/kb/3041911

QUESTION 30
Your network contains an Active Directory domain. The domain contains 100 computers that run Windows 10.

You plan to develop a line-of-business application and to deploy the application by using Windows Store for Business.

You need to ensure that users can see the private store of your company when they sign in to the Windows Store for Business.

What should you do first?

A. Provision a Windows Dev Center dev account for each user.
B. Assign the Windows Store Purchaser role to each user.

C. Assign the Windows Store Admin role to each user.
D. Provision a Microsoft Azure Active Directory (Azure AD) account for each user.
E. Provision a Microsoft account for each user.

Correct Answer: D
Section: Mixed   Questions
Explanation

Explanation/Reference:
Explanation:

QUESTION   31
DRAG DROP

You have a line-of-business universal app named App1. You have an image of Windows 10 Enterprise named Image1.

Image1 is mounted to the C:\Folder1 folder on a Windows 10 Enterprise computer named Computer1. The source for App1 is in the C:\Folder2 folder.

You need to ensure that App1 is included in Image1.

What command should you run on Computer1? To answer, drag the appropriate values to the correct locations. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Select and Place:

Values

Add-AppxPackage

Add-AppxProvisionedPackage

-Online

-PackagePath

-Path

-SkipLicense

Answer Area

Value	Value	C:\Folder1

Value	C:\Folder2\App1.appx	Value

Correct Answer:

Values

Add-AppxPackage

-Online

Answer Area

| Add-AppxProvisionedPackage | -Path | | C:\Folder1 |

| -PackagePath | | C:\Folder2\App1.appx | -SkipLicense |

QUESTION   32
DRAG DROP

You have a computer that runs Windows 10.

You need to meet the following requirements:

- Users must use complex passwords.
- Users must change their password every 180 days.
- Users must be prompted to change their password seven days before the password expires.

Which policy setting should you configure for each requirement? To answer, drag the appropriate policy settings to the correct requirements. Each policy setting may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Select and Place:

Answer Area

Account Lockout Policy

Audit Policy

Password Policy

Security Options

User Rights Assignment

Users must change their password every 180 days: **Policy Setting**

Users must use complex passwords: **Policy Setting**

Users must be prompted to change their password seven days before the password expires: **Policy Setting**

Correct Answer:

Answer Area

Account Lockout Policy		Users must change their password every 180 days:	Password Policy
Audit Policy			
Password Policy		Users must use complex passwords:	Password Policy
Security Options		Users must be prompted to change their password seven days before the password expires:	Security Options
User Rights Assignment

QUESTION 44
You support Windows 10 Enterprise laptops. Microsoft BitLocker Administration and Monitoring (MBAM) is deployed on your network on a server named SERVER1.

Company policy requires that laptops with MBAM client installed prompt users to enable BitLocker within 2 hours of being started.

You need to make changes to the Configure MBAM Services Group Policy settings.

Which two actions should you perform? Each correct answer presents part of the solution.

A. Set Select BitLocker Recovery Information to store to Recovery password only.
B. Set Select BitLocker Recovery Information to store to Recovery password and key package.
C. Set Enter status reporting frequency (in minutes) to 120.
D. Set MBAM Status reporting endpoint to SERVER1.
E. Set MBAM Recovery and Hardware service endpoint to SERVER1.

F. Set Enter client checking status frequency (in minutes) to 120.

QUESTION 45
You purchase a new Windows 10 Enterprise desktop computer. You have six external USB hard drives.

You want to create a single volume by using the six USB drives. You want the volume to be expandable, portable, and resilient in the event of simultaneous failure of two USB hard drives.

You need to create the required volume.

What should you do?

A. From Control Panel, create a new Storage Space across 6 USB hard drives.Set resiliency type to Parity.
B. From Disk Management, create a new striped volume.
C. From Disk Management, create a new spanned volume.
D. From Control Panel, create a new Storage Space across 6 USB hard drives. Set resiliency type to Three-way mirror.

QUESTION 50
All client computers in a company's network environment run Windows 10 Enterprise. A client computer has drives that are configured as shown in the following table.

Drive	Location	Type
C:	Internal	Dynamic
D:	Internal	Dynamic
E:	Internal	Optical
F:	External	Basic
Z:	Network	Mapped

You are choosing a backup destination for drive C. You have the following requirements:

▪ Ensure that the backup file is available if drive C: fails.
▪ Ensure that the backup file can be accessed by other computers on the network. ▪
Support the storage of multiple versions of system image backups.

You need to select a backup destination that meets the requirements.

Which destination should you select?

A.   drive D:
B.   drive F:C. drive E: D. drive Z:

QUESTION 57
Your company has a standard power scheme for the sales team. You are replacing a laptop for a sales associate.

You import the power scheme onto the new laptop.

You need to apply the power scheme.

What should you do?

A. Modify the power scheme under Power and Sleep settings.
B. Run the gpupdate /F command.
C. Run the powercfg /S command.
D. Modify the advanced power settings.

Correct Answer: C
Section: Mixed   Questions
Explanation

Explanation/Reference:
Explanation:

To Import a Power Plan
1. Open an elevated command prompt.2. Type the command below into the command prompt,
and press Enter to export the power plan. (see screenshot below)

http://www.tenforums.com/images/smilies/arrow.pngpowercfg -import "Full path of .pow file"

Note:
Substitute Full path of .pow file in the command above with the actual full path of the .pow file of the power plan you exported in Option One. For example:
powercfg -import

"%UserProfile%\Desktop\PowerPlanBackup.pow"

Click image for larger version.
Name: Import_Power_Plan.png
Views: 43
Size: 17.9 KB
ID: 68738
4. When finished, you can close the command prompt if you like.5. Users on the PC will now be able to select the imported power plan as their active power p

QUESTION 58
You manage a client Windows 10 Enterprise computer named Computer1.

You have a OneDrive synchronized folder that contains .pdf files.

You need to ensure that you can restore previous versions of the .pdf files.

What should you do?

A. Enable File History.
B. Configure System Restore.
C. Configure Computer1 as a trusted PC.
D. Enable Sync your settings on Computer1.

Correct Answer: A
Section: Mixed   Questions
Explanation

Explanation/Reference:
Explanation:
File History regularly backs up versions of your files in the Documents, Music, Pictures, Videos,

and Desktop folders and the OneDrive files available offline on your PC. Over time, you'll have a complete history of your files. If the originals are lost, damaged, or deleted, you can restore them.
You can also browse and restore different versions of your files. For example, if you want to restore an older version of a file (even if it wasn't deleted or lost), you can browse through a timeline, select the version you want, and restore it.

QUESTION 59
A company has an Active Directory Domain Services (AD DS) domain with one physical domain controller. All client computers run Windows 10 Enterprise.

A client computer hosts a Windows 10 Enterprise virtual machine (VM) test environment. The VMs are connected to a private virtual switch that is configured as shown in the Virtual Switch Manager exhibit.

Virtual Switch Manager for COMPUTER1

Virtual Switches
- New virtual network switch
- ⊞ New Virtual Switch
  - Private virtual switch

Global Network Settings
- MAC Address Range
  - 00-15-5D-E5-CC-00 to 00-15-5D-E...

Virtual Switch Properties

Name:

New Virtual Switch

Notes:

Connection type

What do you want to connect this virtual switch to?

- ○ External network:

  Atheros AR9285 Wireless Network Adapter

  ☑ Allow management operating system to share this network adapter

  ☐ Enable single-root I/O virtualization (SR-IOV)

- ○ Internal network
- ● Private network

VLAN ID

☐ Enable virtual LAN identification for management operating system

The VLAN identifier specifies the virtual LAN that the management operating system will use for all network communications through this network adapter. This setting does not affect virtual machine networking.

2

Remove

ⓘ SR-IOV can only be configured when the virtual switch is created. An external virtual switch with SR-IOV enabled cannot be converted to an internal or private switch.

OK   Cancel   Apply

The VMs are unable to connect to the domain controller. You have the following requirements:

▪ Configure the test environment to allow VMs to communicate with the domain controller.
▪ Ensure that theVMs can communicate with other VMs in the test environment when the domain controller is unavailable.

You need to meet the requirements.

What should you do first?

A. Create a new virtual switch with an Internal Network connection type.
B. Change the connection type of the private virtual switch to Internal only.
C. Create a new virtual switch with a Private Network connection type.
D. Create a new virtual switch with an External Network connection type.

Correct Answer: D

QUESTION   60
DRAG DROP

You administer Windows 10 Enterprise tablets and virtual desktop computers that are joined to an Active Directory domain.

Your company provides virtual desktop computers to all users. Employees in the sales department also use tablets, sometimes connected to the company network and sometimes disconnected from the company network.

You want sales department employees to have the same personal data, whether they are using their virtual desktop or their tablets.

You need to configure the network environment to meet the requirements.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the lust of actions to the answer area and arrange them in the correct order. More than one order to answer choices may be correct. You will receive credit for any of the correct orders you select.

Select and Place:

Actions

Actions
Enable slow-link mode for the tablets.
Create a network share.
Configure offline files for the tablets.
Disable offline files on the network share.
Configure folder redirection for the employees' domain accounts to the network share.
Specify the file share for which you want to enable Always Offline mode and set the value to 1.
Set the primary computer for all employees from the sales department.

Answer Area

(<) (>)

Correct Answer:

Actions

Enable slow-link mode for the tablets.
Disable offline files on the network share.
Specify the file share for which you want to enable Always Offline mode and set the value to 1.
Set the primary computer for all employees from the sales department.

Answer Area

Create a network share.
Configure offline files for the tablets.
Configure folder redirection for the employees' domain accounts to the network share.

QUESTION 72
You have a Windows 10 Enterprise computer that has File History enabled.

You create a folder named Data in the root of the C: drive.

You need to ensure that Data is protected by File History.

What are two possible ways to achieve the goal? Each correct answer presents a complete solution.

A. From File Explorer, include Data in an existing library.
B. Modify the Advanced settings from the File History Control Panel item. C. From File Explorer, create a new library that contains Data
D. From File Explorer, modify the system attribute of Data.

Correct Answer: AC

QUESTION   87
DRAG DROP
As part of its upgrade to Windows 10 Enterprise, your company is implementing additional security controls relating to data access.
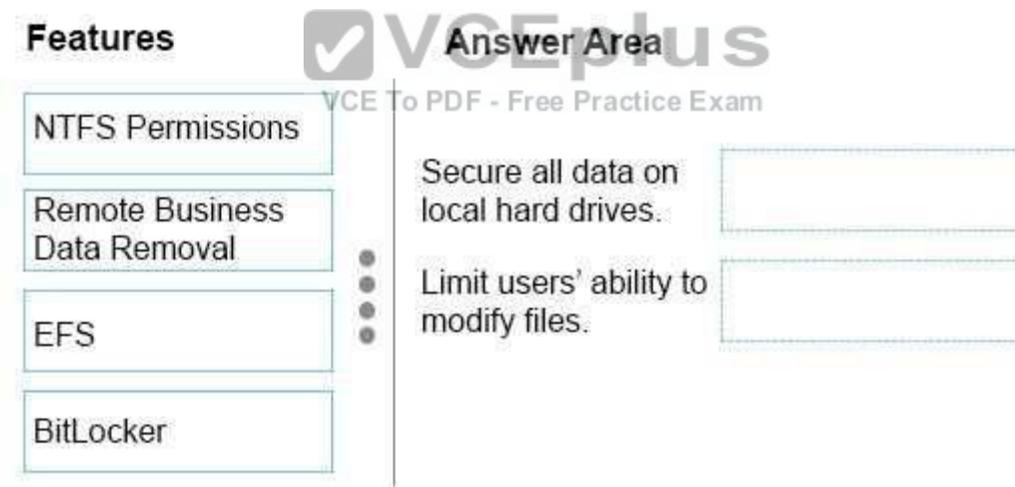

You need to implement a solution that meets the following requirements:
▪ Secure all data on local hard drives.

▪ Limit users' ability to modify files.

Which feature should you use to meet each requirement? To answer, drag the appropriate feature or features to the correct requirement or requirements. Each feature may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Features	Answer Area
NTFS Permissions	Secure all data on local hard drives.
Remote Business Data Removal	Limit users' ability to modify files.
EFS	
BitLocker	

Correct Answer:

Features

Features
Remote Business Data Removal
EFS

Answer Area

Secure all data on local hard drives.	BitLocker
Limit users' ability to modify files.	NTFS Permissions

QUESTION 92
You are the desktop administrator for a small company.

The company modifies its policy for retaining company financial documents from six months to three years. You currently use File History, retaining files for six months and saving copies of files every 20 minutes.

You need to adjust your current backup solution to accommodate the policy change.

What should you do?

A. Set the Keep Saved Versions option in File History to Forever.
B. Set the backup solution to Recovery model.
C. Set the Save Copies of Files frequency to Daily.
D. Set the File History log file setting to Archive the log when full, do not overwrite events.

Correct Answer: A
Section: Mixed   Questions
Explanation

Explanation/Reference:
Explanation:

You can select one, two years or forever; there is no option for three years. Therefore, the only option is to keep the files forever.

QUESTION   93
DRAG DROP
Ten client computers run Windows 7 and a custom application. The custom application is compatible with Windows 10 Enterprise.

You purchase 10 new computers that have Windows 10 Enterprise pre-installed. You plan to migrate user settings and data from the Windows 7 computers to the Windows 10 Enterprise computers. You add the User State Migration Toolkit (USMT) on a USB flash drive.

You need to ensure that the custom application settings are applied to the Windows 10 Enterprise computers after the migration is complete.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

Run the **scanstate** command on the Windows 7 computers.

Run the **loadstate** command on the Windows 10 Enterprise computers.

Uninstall the custom application from the Windows 7 computers.

Run the **loadstate** command on the Windows 7 computers.

Install the custom application on the WIndows 10 Enterprise computers.

Run the **scanstate** command on the Windows 10 Enterprise computers.

Answer Area

Correct Answer:

Actions

Uninstall the custom application from the Windows 7 computers.

Run the **loadstate** command on the Windows 7 computers.

Run the **scanstate** command on the Windows 10 Enterprise computers.

Answer Area

Run the **scanstate** command on the Windows 7 computers.

Install the custom application on the WIndows 10 Enterprise computers.

Run the **loadstate** command on the Windows 10 Enterprise computers.

QUESTION 102
You support Windows 10 Enterprise computers. Your company protects all laptops by using the BitLocker Network Unlock feature.

Some employees work from home.

You need to ensure that employees can log on to their laptops when they work from home.

What should you do?

A. Have users run the Manage-bde.exe –unlock command before they disconnect from the company network.
B. Ensure that the Trusted Platform Module (TPM) chips in the laptops are version 1.2 or greater.
C. Enable BitLocker To Go.
D. Provide employees with their BitLocker PINs.

QUESTION 103
You administer Windows 10 Enterprise tablets that are members of an Active Directory domain.

You want to create an archived copy of My Documents folders that are stored on the tablets. You create a standard domain user account to run a backup task.

You need to grant the backup task user account access to the folders.

What should you do?

A. Add the backup task account to the Remote Management Users group on a domain controller

B. Add the backup task account to the Backup Operators group on every tablet.
C. Add the backup task account to the Backup Operators group on a domain controller.
D. Set the backup task account as NTFS owner on all the folders.

QUESTION 105
You manage Windows 10 Enterprise desktop and laptop computers for your company. They are part of a Windows Server 2012 R2 Active Directory Domain Services (AD DS) environment. The system administrators implement DFS for flexibility and availability. Laptops are able to connect to the company's private network by using local Ethernet or secure wireless.

Three users report that their files on the server are missing, and they no longer have drive G.

You need to ensure that the three users' computers can access the DFS namespace so that you can troubleshoot by using the DFS client.

What should you do?

A. Ascertain whether the three users are connected through a wireless or wired connection.
B. Ensure that the three users have access to the domain NETLOGON share.
C. Ensure that the Net Logon service is running on all servers that are hosting the DFS namespace.
D. Verify that a share is defined on the folder to which drive G is being mapped.

QUESTION 113
You manage desktop computers on your company network. The finance department uses computers that rub Widows 7 Enterprise and a 32-bit legacy application.
The application has some compatibility issues with Widows 10 Enterprise. The application uses domain single sign-on for authentication.

The vendor releases a new version of the application that is fully compatible with Windows 10 Enterprise These versions cannot be installed on the same computer due to HKEY_CURRENT_USER registry setting conflicts.

You need to migrate the finance department computers Widows 10 Enterprise while meeting the following requirements:
▪ Users are able to use the original version of the application while validating the new version.
▪ Once the new version is validated, the old version is removed with minimal effort. ▪
Users authenticate only once to use the application.

Which technology should you choose?

A. Microsoft Application Compatibility Toolkit (ACT)
B. Hyper-V
C. Microsoft Application Virtualization (App-V)
D. User Experience Virtualization (UE-V)

QUESTION 126
You administer Windows 10 Enterprise computers.

Users are able to download applications from the Internet and install them on their computers.

You need to ensure that users can install only digitally signed applications from approved publishers.

What should you do?

A. Create AppLocker Publisher rules.
B. Turn on Windows SmartScreen.
C. Enable the Check for signatures on downloaded programs option.
D. Add publishers' websites to the Trusted Sites zone.

Correct Answer: A

QUESTION 127
You are a desktop support technician for your company.

You deliver new Windows 10 Enterprise laptops to the software developers. The software developers frequently use laptops to work remotely and are often disconnected from the corporate network. One of the software developers works on an application that must run on Windows XP, Windows Vista, Windows 7, and Windows 10 Enterprise. The software developer needs the ability to test the application natively on each of these operating systems.

You need to provide the software developer with a way to test the application on all operating system versions on the new laptop. The software developer must be able to perform the testing while working remotely without access to corporate resources.

What should you do?

A. Use Hyper-V to create three virtual machines that provide Windows XP, Windows Vista, and Windows 7 environments.
B. Install the Windows PE version of Windows XP, Windows Vista, and Windows 7 on three USB drives and boot from each drive to test each operating system version.
C. Change the compatibility mode settings of the application to Windows XP, Windows Vista, and Windows 7 before testing each operating system version.
D. Create three virtual machines for Windows XP, Windows Vista, and Windows 7 on a company Windows Server 2012 that is running Hyper-V.

QUESTION 137
You have 100 Windows computers that are managed by using Microsoft Intune.

You need to ensure that when a new critical update is released, the update is approved automatically and deployed to the computers within 24 hours of approval.

What should you do from the Microsoft Intune administration portal?

A. From the Updates node, select Critical Updates, and then modify the Approval settings.
B. From the Admin node, click Enrollment Rules, and then modify the device enrollment rules.
C. From the Admin node, click Updates, and then create a new automatic approval rule.
D. From the Policy node, click Compliance Policies, and then create a new compliance policy.
E. From the Policy node, click Configuration Policies, and then create a new Windows policy.

Correct Answer: C
Section: **Mixed** **Questions**
Explanation

Explanation/Reference:
Explanation:
Automatic approval rules – These rules automatically approve specified types of update and reduce your administrative overhead. For example, you might want to automatically approve all critical software updates.

QUESTION 138
Your company has a main office and a branch office. Each office contains several servers that run Windows Server 2012.

You need to configure BranchCache for the client computers in the branch office. The solution must ensure that all of the cached content is in a central location.

What should you run on each client computer?

A. the **Enable-BCDistributed** cmdlet
B. the **Enable-BCHostedClient** cmdlet
C. the **Enable-BCLocal** cmdlet
D. the **Enable-BCHostedServer** cmdlet

Correct Answer: D
Section: Mixed Questions

QUESTION 139
You administer a Windows 10 Enterprise computer.

The computer is configured to encrypt several folders by using a self-signed Encrypted File System (EFS) certificate.

You need to make a backup copy of the encryption keys.

What should you do?

A. Open the Certificates console and connect to the user account certificates. Export the self-signed EFS certificate from the Trusted People folder to a Canonical Encoding Rules (CER) file.
B. Open the Certificates console and connect to the user account certificates. Find the personal self-signed EFS certificate and export it to a Personal Information Exchange (PFX) file.
C. Open the Certificates console and connect to the user account certificates. Export the personal self-signed EFS certificate from the Trusted Root Certification Authority folder to a Personal Information Exchange (PFX) file.
D. Open the Certificates console and connect to the computer account certificates. Export the self-signed EFS certificate from the Trusted People folder to a Canonical Encoding Rules(CER) file.

Correct Answer: B

QUESTION 140
You administer Windows 10 Enterprise computers that are members of an Active Directory domain.

Some volumes on the computers are encrypted with BitLocker. The BitLocker recovery passwords are stored in Active Directory. A user forgets the BitLocker password to local drive E: and is unable to access the protected volume.

You need to provide a BitLocker recovery key to unlock the protected volume.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. Ask the user for his or her logon name.
B. Ask the user for a recovery key ID for the protected drive.
C. Ask the user for his or her computer name.
D. Ask the user to run the **manage-bde –protectors –disable e:** command.

Correct Answer: CD

QUESTION   141
DRAG DROP
You are a desktop administrator for a small company and have just upgraded two laptops from Windows 8 to Windows 10 Enterprise.

When the computers were running Windows 8, Backup and Restore was active and was scheduled to back up data files two times a day to an external hard disk.

You need to enable File History so that copies of files are saved to a network drive.

Which three actions should you perform in sequence? To answer, move the appropriate three actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

Select Network Drive.

Make Changes to Advanced Settings.

Turn on File History.

Disable the Windows 8 Backup schedule.

Answer Area

Correct Answer:

Actions	Answer Area
	Make Changes to Advanced Settings.
	Select Network Drive.
	Turn on File History.
Disable the Windows 8 Backup schedule.	

Section: Mixed Questions
Explanation

QUESTION 142
You have a portable Windows 10 Enterprise computer.

You are creating a backup plan. You have the following requirements:
▪ Automatically back up the files in your Documents folder every hour.
▪ Ensure that you can recover different versions of the backed-up files. ▪
Do not back up the Windows operating system files.

You need to configure the computer to meet the requirements.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. Connect an external hard drive to the computer.
B. Turn on File History.
C. Create a volume mount point in your Documents folder.
D. Schedule a task to create a restore point every hour.
E. Create a recovery drive on drive C.

Correct Answer: AB
Section: Mixed Questions
Explanation

**Explanation/Reference:**

QUESTION 143
A company has an Active Directory Domain Services (AD DS) domain with one physical domain controller. All client computers run Windows 10 Enterprise.

A client computer hosts a Windows 10 Enterprise virtual machine (VM) test environment. The VMs are connected to a private virtual switch that is configured as shown in the Virtual Switch Manager exhibit.
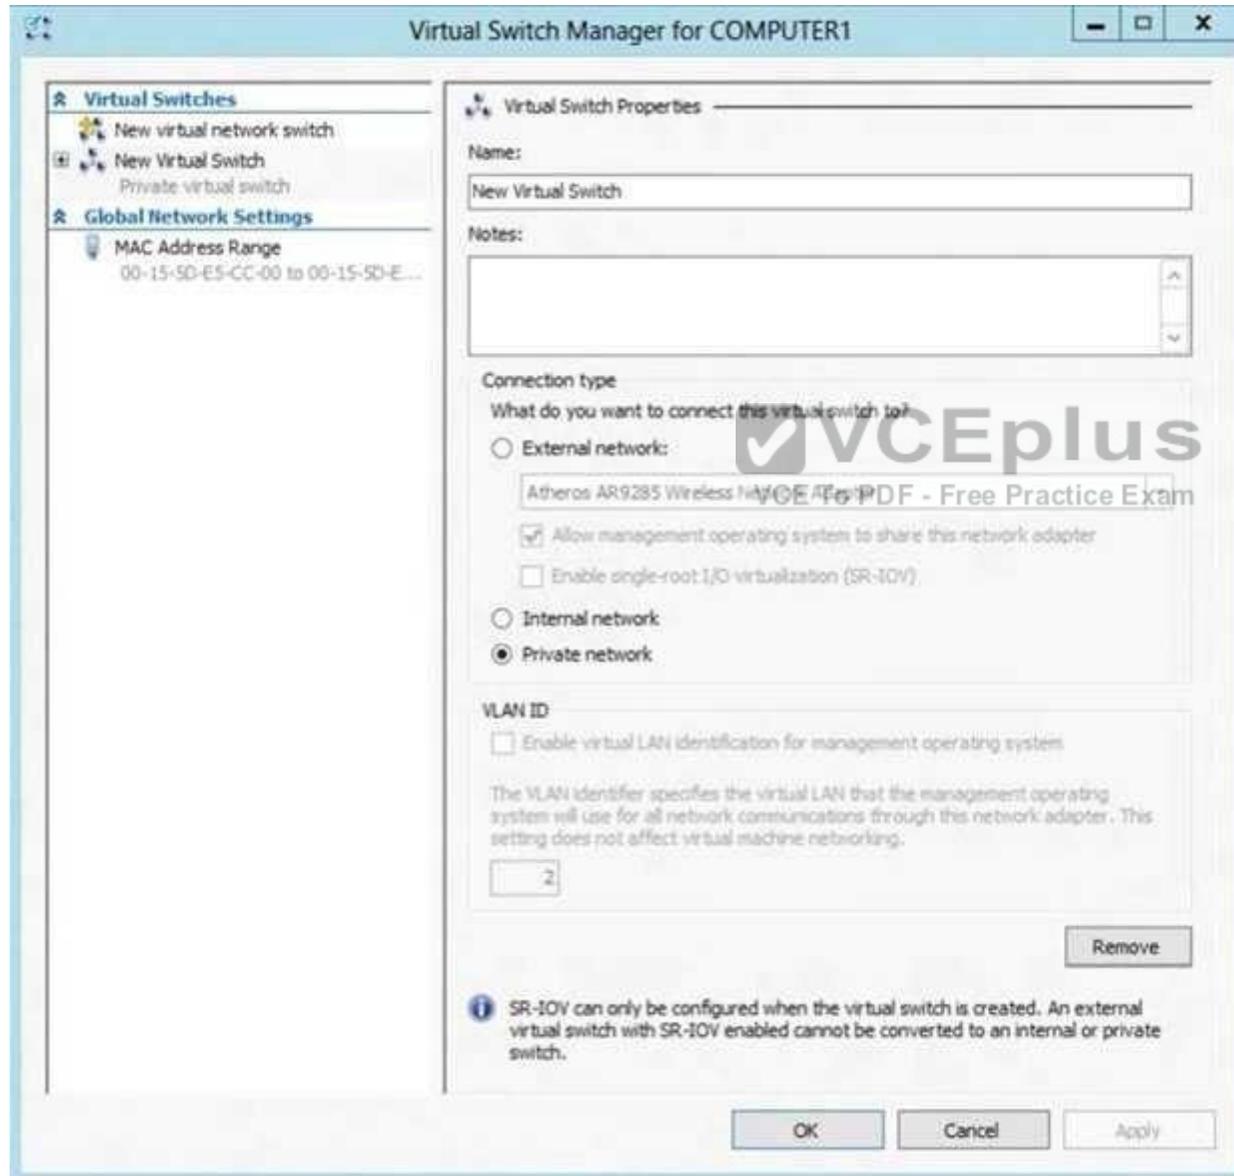

You have the following requirements:

▪ Configure the test environment to allow VMs to communicate with the host machine. ▪
Minimize impact on the host machine.

You need to meet the requirements.

What should you do first?

A. Change the VLAN ID of the private virtual switch to Enable Virtual LAN identification.
B. Create a new virtual switch with a Private Network connection type.
C. Create a new virtual switch with an External Network connection type.
D. Create a new virtual switch with an Internal Network connection type.

Correct Answer: D
Section: Mixed   Questions
Explanation

Explanation/Reference:
Explanation: http://john.bryntze.net/jbkb-v2/certification-exam-70-687-configuring-windows-8-part-2- configure-hardware-and-
applications-16/
Virtual switches/ Hyper-V VLAN - you can create 3 different types of virtual switches depending the needs of your virtual machines and one single machine can
use multiple virtual NICs that is member of different Virtual Switches.
External - This virtual switch binds to the physical network adapter and create a new adapter you can see in Control Panel\Network and Internet\Network
Connections so if a virtual machine needs contact outside the host machine this one is a must.
Internal - This virtual switch can be used to connect all virtual machines and the host machine but cannot go outside
that. Private - This virtual switch can only be used by the virtual host Further information:
http://technet.microsoft.com/en-us/library/cc816585%28v=ws.10%29.aspx

Hyper-V Networking: Three types of Virtual Networks:

Type	Parent OS	VMs on Same HV	VMs on Remote HV	LAN	Remark
External	x	x	x	x	Conn. Lost Temporarily
Internal	x	x			
Private		x			
Dedicated		x		x	

Configuring Virtual Networks Private will not allow communication with the host machine. External will allow communication with the host machine but also allow
access to other machines on the host machine's network which is not a requirement.

QUESTION 144
You administer Windows 10 Enterprise computers. You have secured the computers by using BitLocker.

You have distributed a new application to the computers. Users report that file associations for ZIP archives is broken and users are unable to open ZIP files.

You need to design a solution that recovers file association. You also need to ensure that BitLocker encryption settings are maintained.

What should you do?

A. Restore computer from the latest restore point.
B. Modify setting in Change default settings for media or devices.
C. Delete the HKEY CLASSES_ROOT\exefile\shell\open\command registry key.
D. Select Reset your PC.

Correct Answer: A

Explanation

Explanation/Reference:

QUESTION 148
You are a systems administrator for your company. The company has employees who work remotely by using a virtual private network (VPN) connection from their computers, which run Windows 10 Enterprise.

These employees use an application to access the company intranet database servers. The company recently decided to distribute the latest version of the application through using a public cloud.

Some users report that every time they try to download the application by using Internet Explorer, they receive a warning message that indicates the application could harm their computer.

You need to recommend a solution that prevents this warning message from appearing, without compromising the security protection of the computers.

What should you do?

A. Publish the application through a public file transfer protocol (FTP) site.
B. Publish the application through an intranet web site.
C. Instruct employees to disable the SmartScreen Filter from within the Internet Explorer settings.
D. Digitally sign the application by using a trusted certificate, and then update the default App Package Deployment policy on all computers.

Correct Answer: D
Section: Mixed Questions

QUESTION 151
A company installs a line-of-business (LOB) app on a server that runs Remote Desktop Services.

You need to ensure that you can publish the application by using RemoteApp.

What should you do first?

A. Create a personal desktop session collection.
B. Manually assign users to a session host.
C. Create a pooled desktop collection.
D. Automatically assign users to a session host.

Correct Answer: C

Explanation/Reference:
References: https://docs.microsoft.com/en-us/windows-server/remote/remote-desktop-services/rds-create-collection#create-a-pooled-desktop-session-collection

QUESTION 152
You have a Windows Server 2012 R2 server that runs Remote Desktop services.

Users report that they cannot connect to RemoteApp programs. You observe that users do not know the proper connection details to access the Remote Desktop Web Access server.

You need to simplify the process for connecting from Windows 10 devices to the Remote Desktop Web Access server.

What should you create?

A. Connection Manager Administration Kit connection profile
B. Remote Desktop Connection configuration file
C. Windows Remote Management script
D. client configuration file

Correct Answer: A

QUESTION 153
HOTSPOT
You administer Windows 10 Enterprise computers in your company network, including a computer named Client1.

On Client1, you create a new folder named C:\Folder1 and configure its NTFS permissions.

You need to ensure that only members of a group named Managers can access the folder content.

In the Advanced Security Settings for Folder1 pane, which security setting should you configure first? To answer, select the appropriate setting in the answer area.

Hot Area:

Advanced Security Settings for Folder1

Name: C:\Folder1

Owner: Administrators (CLIENT1\Administrators) 🛡 Change

Permissions | Auditing | Effective Access

For additional information, double-click a permission entry. To modify a permission entry, select the entry and click Edit (if available).

Permission entries:

|	Type	Principal	Access	Inherited from	Applies to
👥	Allow	Managers (CLIENT1\Managers)	Modify	None	This folder, subfolders and files
👥	Allow	Administrators (CLIENT1\Ad...	Full control	C:\	This folder, subfolders and files
👥	Allow	SYSTEM	Full control	C:\	This folder, subfolders and files
👥	Allow	Users (CLIENT1\Users)	Read & execute	C:\	This folder, subfolders and files
👥	Allow	Authenticated Users	Modify	C:\	

Add | Remove | View

Disable inheritance

☐ Replace all child object permission entries with inheritable permission entries from this object

OK | Cancel | Apply

Correct Answer:

Advanced Security Settings for Folder1

Name: C:\Folder1

Owner: Administrators (CLIENT1\Administrators) [Change]

Permissions | Auditing | Effective Access

For additional information, double-click a permission entry. To modify a permission entry, select the entry and click Edit (if available).

Permission entries:

QUESTION   154
DRAG DROP
A company has a branch office with Windows 10 Enterprise client computers. Files are saved locally on the client computers and are not backed up regularly.

You need to ensure that you can retrieve previous versions of locally saved files in the event of a system failure.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

Configure a shared folder named SharedArchive on the network.

Create a folder named LocalArchive on the system drive.

Turn on File History and copy the data to the Documents library.

Turn on File History and copy the data to the system drive.

Configure File History to use the LocalArchive folder.

Configure File History to use the SharedArchive folder.

Answer Area

Correct Answer:
Section: Mixed Questions
Explanation

Explanation/Reference:
References: https://support.microsoft.com/en-za/help/17128/windows-8-file-history

Actions

Create a folder named LocalArchive on the system drive.
Turn on File History and copy the data to the system drive.
Configure File History to use the LocalArchive folder.

Answer Area

Configure a shared folder named SharedArchive on the network.
Turn on File History and copy the data to the Documents library.
Configure File History to use the SharedArchive folder.

QUESTION 155
A company has Windows 10 Enterprise client computers. File History is on.

An employee downloads data to a folder on drive D named Archives.

You need to ensure that the user can restore files from the Archives folder by using File History.

What should you do?

A. Configure the File History advanced settings to include the Archives folder.
B. Create a library named History and add the Archives folder to the library.
C. From the File History configuration options, change the drive and select the Archives folder.
D. Move the Archives folder into the Windows system folder.

QUESTION 164
DRAG DROP
You are a desktop administrator for an organization.

Developers must be able to develop applications and process on their own machines without affecting a corporate desktop, and without needing virtual machines (VMs) created on server-based virtualization platforms. The developers need three different VMs configured for the development environment.

The requirements are as follows:
▪ Dev1 VM must support a virtual floppy disk.
▪ Dev2 VM must boot from a virtual SCSI disk. ▪
Dev3 VM must boot from a virtual IDE disk.

You need to create the appropriate generation 1 or generation 2 VMs to support the requirements.

How should you configure the VMs? To answer, drag the appropriate VM generations to the correct VMs. Each VM generation may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

QUESTION 167
DRAG DROP
You plan to deploy Microsoft Office 365 for all users in an organization. You have the following requirements:

Users need to utilize Microsoft SharePoint Online.
Use Office 365 Advanced Security Management.

You need to deploy Office 365 to meet the requirements.

Which three actions should you perform in sequence. To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Correct Answer:

Actions

Launch the Microsoft Azure portal and turn on Advance Security Management.
Purchase and assign Office 365 Enterprise E5 licenses for all users.

Answer Area

Purchase and assign Office 365 Enterprise E3 licenses for all users.
Launch the Security and Compliance Center portal and turn on Advanced Security Management.
Go to the Advance Security Management portal and create a new policy and alert.

QUESTION 168
A company implements Microsoft Office 365.

You must prevent credit card numbers and other sensitive information in documents from being sent externally.

You need to ensure that the data is protected on all devices.

What are two possible ways to achieve the goal? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

A. Configure a data loss prevention (DLP) policy.
B. Configure a Microsoft Intune mobile device management (MDM) policy.
C. Implement Microsoft Azure Rights Management.
D. Configure a threat management policy.

Correct Answer: AC

QUESTION 169
You administer Windows 10 Enterprise desktops.

You discover that a company employee enabled file encryption on several folders by using a self-signed Encrypted File System (EFS) certificate.

You need to ensure that you are able to decrypt the encrypted files if the user profile is deleted.

What should you do?

A. Open the Certificates console and connect to the user account certificates. Export the personal self-signed EFS certificate from the Trusted Root Certification Authority folder to a Personal Information Exchange (PFX) file.
B. Open the Certificates console and connect to the user account certificates. Find the personal self-signed EFS certificate and export it to a Personal Information Exchange (PFX) file.
C. Open the Certificates console and connect to the computer account certificates. Export the self-signed EFS certificate from the Trusted People folder to a Canonical Encoding Rules (CER) file.
D. Open the Certificates console and connect to the user account certificates. Export the self-signed EFS certificate from the Trusted People folder to a Canonical Encoding Rules (CER) file.

Correct Answer: B
