Huawei H13-629

HCIE-storage

Exam A

QUESTION 1
A hospital bought a Huawei OceanStor 9000V100R001C30 storage device for storing business data. According to the relevant laws and regulations, which of the following example descriptions of disease preservation of system data using InforLocker function is wrong:

A. The engineer has set the WORM root directory according to the hospital's requirements, and all the subdirectories under this directory have the WORM attribute.
B. During the file protection period, no one can delete the protected file.
C. Protected Documents are Protected for a Period of 70 Years on Huawei OceanStor 9000 Storage Device.
D. WORM log save root, quota and WORM protection period cannot be set.

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:

QUESTION 2
N8000 clustered NAS system to provide file system sharing services, surface VxFS file system and roll features the correct statement:

A. VxFS is a non-log file system that can support more than 2T files.
B. File system snapshot using copy-on-write (copy-on-write technology) and other files together, share partition or volume storage space.
C. Provide file system-level snapshots, copy.
D. File System Snapshots, Scenarios, Replication, etc. Features are based on Storage Checkpoint.

Correct Answer: BC

Section: (none)
Explanation

Explanation/Reference:
QUESTION 3
In an OceanStor V3 system storage array, all the snapshots of a LUN occupy no more space than the LUN.

A. True
B. False

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:

QUESTION 4
When the client adopts the SMB 1.0 / 2.0 / 2.1 / 3.0 protocol, while performing file replication inside Huawei OceanStor 9000, it does not need to pass through the client, but directly in the system to tell the completion.

A. True
B. False

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:

QUESTION 5
Client1 needs to read file X from Huawei OceanStor 900 and the node that responds to the read request is node A.

Choose the process, which of the analysis is correct:

A. If the system has monitored the file X has been cached on Node B, the client client1 can read the file directly from Node B.
B. If the system monitors that node B has cached file X, then node A can read the file from node B.

C. After HUAWEI OceanStor 9000 processes the request for reading the file X from client1, the system reserves the message on both node A and node B.

D. If the system monitors that node A has cached file X, then node A only caches the data of file X and does not cache its verification data **Correct Answer:** BD

QUESTION 6

For commonly used SQL Server 2005 and 2008, users can connect to the specified server through the SQL Server Management Studio tool Database Engine. There are two connections in the connection group authentication method. Which method client application connection to provide the required landing User ID and password?

A. SQL Server Authentication

B. Windows authentication

C. Log in as superuser

D. Other ways when landing

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:

QUESTION 7

Engineer installed a customer unit for OceanStor 9000 equipment installation (a total of 5 OceanStor 9000 C Node, front and rear ends are 10GE TOE networking, on-site installation TOE network card). Then connected the signal lines, power lines, and debugged the software. In the period of project tension, the hardware installation process has some of the following phenomena. Which of the following description of these phenomena is correct? (Multiple choice.)

A. 5 devices TOE NIC A0, B1, and A0, B3 have these two ways, as are inserted in the PCIe slot, will not affect the system. Deployment will not affect the network bandwidth, so it cannot be adjusted.

B. The signal cables are long and need to be strapped to the cabinet or placed on the bottom tray.

C. Label NODE 01 A0-0 The signal cable is inserted in the network port A0-1. The signal cable labeled NODE01 B3-1 is inserted in the network position B3-0, due to the same network card two network port peer, you can place the wrong line, you cannot adjust.

D. CE6850 switch connected to two stacked copper cables, one of which is needed to post-cold more cold, because it does not affect the network interoperability. You can base this software debugging.

Correct Answer: BD
Section: (none)
Explanation
Explanation/Reference:

QUESTION 8
A customer deploys a set of OceanStor V3 storage in two cities and adopts asynchronous remote replication networking between the two storage arrays. Which of the following statement is correct? (Multiple choice.)

A. The automatically created Asynchronous Remote Copy snapshot can either be a private quick pick or a public one.
B. In a DR scenario, it is recommended to create a virtual snapshot of the secondary LUN and map it to the host for access.
C. In remote replication link networking, parallel networking is better than crossover networking.
D. The number of LUNs in the consistency group should be as small as possible, and only the LUNs that have write dependencies on the same application are placed in a consistency group.

Correct Answer: CD
Section: (none)
Explanation

Explanation/Reference:

QUESTION 9
Huawei Standard Edition N8500 has two nodes the business mount Pubeth1 and Pubeth4. It opened the NFS service. NFS server except recovery after NFS guest. Client mount point can not be accessed into the directory for a long time without echo. What do you need to do to fix it?

A. Restart the NFS server of the N8500
B. Restart the client's NFS service
C. Reseat the NFS client network cable
D. Forcibly unmount the NFS client mount point and mount it again

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:

QUESTION 10

Huawei OceanStor 9000 external shared mainly NFS and CIFS at the moment.

Set some parameters to improve performance of NFS mounted under the Linux operating system. Which of the following description is correct?

A. Rsize / wsize, read and write the maximum size of each block, it is recommended to adjust to the maximum. General Linux operating system environment, the maximum value of 1M.
B. Async, allowing asynchronous data write, synchronous write requirements. NFS server must brush each data into the hard disk before it can return success delay higher.
C. Noatime, if you do not need to record the file access time, you can increase this parameter to avoid frequent access, modify the access time to open pin.
D. Nolock, if there is a shared file between NFS clients, you can use this parameter. Reduce service-side file lock overhead.

Correct Answer: ABC
Section: (none)
Explanation

Explanation/Reference:

QUESTION 11

In Simpana software, incremental backup means:

A. The data that has changed since the last backup.
B. The data that has been changed since the last full backup.
C. The completion of all data backup.
D. After the initial backup, all data has back up.

Correct Answer: B
Section: (none)
Explanation

QUESTION 12
HUAWEI OceanStor 18000 Engine, SVP, Disk Enclosure, and PCI-e Switch Interconnection are applicable to certain rules and orders. Which of the following statement?

A. SVP needs to be connected multiple engines through two PCIe switches, and each engine controller needs to be connected to a PCIe switch to ensure that link redundancy and to improve reliability.
B. When the control plane is connected to a network, when the engine and the PCI-e switch are interconnected, the port 0, port A3 and PCIe port can be interconnected.
C. Huawei slot 0 and slot 5 of the OceanStor 18000 engine enclosure can be used to install SAS interface modules and interconnect disk enclosures.

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:

QUESTION 13
There are multiple types of disks in a hard disk domain in the OceanStor V3 storage system. If you add one SAS disk to the hard disk domain, diagram will be balanced as follows:

A. Tier 0 disks perform data equalization.
B. All disks in the entire hard disk domain will participate in data equalization.
C. The CK of the target CKG will be released after data equalization is completed.
D. OCeanstor V3 enables cross-engine data equalization.

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:

QUESTION 14
Info Replicator supports copying the data at the same time, the basic attributes of the home directory, extended attributes, ACL (access control list).

WORM (write-once-read-many) and CIFS / NFS share configuration information is also a **wealth island from the end.** When a disaster occurs, master and slave sites can quickly take over the business after the switch.

A. True
B. False

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:

QUESTION 15
When planning OceanStore Unified Storage Array synchronization remote replication, the following description is correct. (Multiple choice.)

A. In the scenario where the actual RPO indicator requires zero, you can choose to synchronize remote replication.
B. Synchronous remote replication can be used to map the main and secondary storage of the two sets of LUN mapping to the host to create a scenario volume instead of….
C. Synchronous remote replication on the remote disaster recovery can be well done.
D. Because synchronous remote replication does not use snapshots, after synchronous remote replication is interrupted abnormally, the data on the primary LUN needs to be resumed in reply. Start synchronization to the slave site.

Correct Answer: AB
Section: (none)
Explanation

Explanation/Reference:

QUESTION 16
Which of the following VMWARE virtual machine scenarios can use VADP backup?

A. The storage is connected directly to the virtual machine, including RDMs, directly to iSCSI or NFS.
B. Virtual machines contain large databases.
C. The virtual machine is deployed in the AIX operating system.
D. Virtual machines contain non-Microsoft family applications.

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:
QUESTION 17
Database applications are one of the important applications supporting storage arrays. Storage arrays, operating systems, file systems, and database application systems, etc.
Different application configurations and parameter settings may affect the service performance. In order to store arrays (such as OceanStor V3 series storage) with SQL server application with the best performance, which of the following statement is wrong:

A. OLTP database generally have a large number of random write, it is recommended to choose RAID 10 to store data.
B. In order to improve write performance, all SQL server database data stored in the LUN write strategy is configured to "write back the image".
C. Because the size of the SQL server page is 8K, in order to ensure the best performance of the database, NTFS allocated block size should not be less than 8KB.
D. SQL Server database instance memory size and recovery mode of choice has no effect on the performance of the database.

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:

QUESTION 18
In the OceanStor VIS6600T dual-redundant switch network environment, using OceanStor Toolkit inspection found that "multi-path state detection "does not pass the inspection report, it is found that there are two routes in the 4 paths of the VIS6600T device's 0 node to each LUN of the array. The path status is disabled. According to the analysis, the switch port connected to port 0 of port A0 of node 0 on node 0 of the VIS6600T is visible on the optical switch. The received optical power is much lower than the rated power of the optical module. What repair strategy of the fault contains the error?

A. Replacing the optical module of port 0 in slot A0 of node 0.
B. Replacing the light of the P0 port in the A0 slot of 0 node.
C. Replacing the optical module of the port connected to port 0 of the corresponding 0-node A0 slot on the switch.
D. Reseat the FC interface card corresponding to slot 0 of node A0.

Correct Answer: D

QUESTION 19

What commands are installed there for viewing SCSI controller information on Linux systems with Qlogic HBAs?

A. lspci | grep SCSI

B. cat / proc / scsi / scsi

C. cat / proc / scsi / qla2300 / 1 | grep port

D. lspci | grep Ethernet

Correct Answer: ABC
Section: (none)
Explanation

Explanation/Reference:

QUESTION 20

Maintaining a persistent connection between host and storage, ESXi must support multipathing. Please check out Incorrect description multipathing for VMware vSphere 5.5

A. In addition to path failover, multipathing also provides load balancing. Load balancing is the process of distributing I / O load across multiple physical paths.

B. In the event of a path failover, the virtual machine I / O delays Nintendo pump by 60s.

C. If the failover takes a long time to complete, the windows virtual machine may interrupt the I / O and eventually fail. To avoid this problem barrier, please set windows virtual machine according to the timeout to at least 30 seconds.

D. When coordinating vmware NMP and any third-party MPP installed, the PSA (Pluggable Storage Architecture) performs load and unload multipathing plug-ins; handle physical path discovery and removal.

Section: (none)
Explanation

Explanation/Reference:

QUESTION 21

Which of the following copy is supported by OceanStor V3 remote file system?

A. Synchronous and asynchronous replication
B. Simultaneous replication
C. Asynchronous replication
D. support multiple file system consistency replication

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:

QUESTION 22
On the Windows Server 2008 R2 system hard disk partition to set a reasonable sector (cluster) size is correct:

A. Create a 2TB NTFS volume, the default sector (cluster) size is 8KB.
B. Create a 30GB FAT32 volume, the default sector (cluster) size is 8KB.
C. NTFS volumes can be set to the largest sector (cluster) to 512KB.
D. The smallest sector (cluster) that an NTFS volume can set is 4KB.

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:

QUESTION 23
A VTL6900-I system, the backup server connected to it is the Linux operating system. The backup server and the VTL6900-I system are directly connected through the FC.
The server identifies the device information as shown below. After the backup server is configured as a backup client for the VTL6900-I system and the backup VTL system on the server virtual library process, which the following operation and description is correct: (Multiple choice.)

A. When configuring the backup client on the VTL side, you need to know that the WWPN of the FC port that connects the VTL to the VTL is available on the server in the sys /class / fc_host directory and subdirectory to the corresponding WWPN port.
B. Server-side identification has been detected with the library device command is cat / proc / scsi / scsi.
C. As shown in the figure, among the devices identified on the server side, the device labeled 1 is the scanned library.
D. As shown in the figure, of the devices identified on the server side, the device labeled 2 is the information for the scanned tape.

Correct Answer: ABC

QUESTION 29
Huawei disaster preparedness plan, production site deployment oracle RAC cluster, in order to ensure the production side failure, disaster recovery database to provide normal service Services.
Which of the following statement is correct?

A. Disaster recovery end must be deployed, oracle rac cluster can not deploy oracle single node.
B. Oracle RAC grid production side of the file must be copied to the disaster recovery side.
C. Unable to copy the production side of the FRA file will be able to guarantee the normal provision of services at the northern end.
D. Production end of the oracle data files and log files can not be placed in the same consistency group.

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:

QUESTION 30
Which of the following information about the InfoEqualizer function of Huawei OceanStor 9000 is correct? (Multiple choice)

A. When using the InfoEqualizer function, you need to configure DNS. If you use an external DNS server, when configuring the DNS server, there is a setting of "reverse lookup zone name", network ID setting in this tab, you need to input network ID in reverse order.
B. When there is a DNS server in the user network, the DNS server in the user network does not need to configure the forwarding record. When the user network without DNS service server, configure the InfoEqualizer DNS IP address as the DNS server's address on the client.
C. The root domain name is the domain name InfoEqualizer configured for the cluster. This domain name must be configured as the fully qualified domain name, that is, the domain name that includes the root node.
D. The domain name of the partition is configured as the relative domain name, and the root domain name of the InfoEqualizer is automatically taken as the suffix of the domain name, and the full name of the domain name is formed with maximum support of 32 partitions.

Correct Answer: BCD

QUESTION 37
A banking business running background storage system requirements are as follows:

(1) Business Impact. The business impact generated by the operating system is about 100KB.
(2) The service operation system is the whole GE network. The server and operating system are GE network. Follow-up to consider the business needs to upgrade to 10GE.
(3) Only requires 72TB of total space, the latter expansion priority to expand the disk
(4) Only 20U of rack space is reserved for the current storage devices. The configuration of three nodes and switches is prioritized to meet the requirements of the machine room. Cabinet planning based on the above requirements. What are the more appropriate networking solutions?

A. Program One:
   1 * OceanStor 9000 C Node
   36 * 2TB SATA configuration
   2 * Front-end GE + 2 * Rear-end 10GE
B. Scenario 2: 3 * Oceanstor 9000 C Node
   36 * 2TB SATA hard drive;

2 * Front-end GE + back-end 2 * 10GE

C. program three:
   3 * OceanStor 9000 P Node
   36 * 2TB SAS configuration
   2 * Front-end GE + 2 * Rear-end 10GE
D. Program Four:
   3 * OceanStor 9000 M Node
   36 * 2TB SAS configuration
   2 * Front-end GE + 2 * Rear-end 10GE

QUESTION 49
Which of the following scenario IO model characteristics belong to random small IO? (Multiple choice.)

A. OLTP
B. OLAP
C. VDI
D. SPC-1

Correct Answer: ACD
Section: (none)
Explanation

Explanation/Reference:

QUESTION 50
Which of the following is not part of the storage troubleshooting process?

A. Manually clear the NMS alarm and turn off the alarm light.
B. Observe the symptom and collect the fault information.
C. Troubleshoot according to the "Event Reference" or "Troubleshooting" manual.
D. Maintain faulty environment and contact technical engineer for support.

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
QUESTION 51
Which technology enhances performance of Huawei OceanStor 9000 application? (Multiple choice.)

A. Support for SMB3 multichannel features that take full advantage of client-side multi-core CPUs and bandwidth resources to dramatically improve performance.

B. When a hard drive has multiple objects at the same time to write requests, support merged into a large continuous IO, significantly improve system performance.

C. **Internal file system replication, without having to go through the client directly in the system to complete high-speed**

D. Supports 10GE and PCIE networking, providing high performance through high-speed inter-node interconnection and reducing system internal delay.

Correct Answer: ABC
Section: (none)
Explanation

Explanation/Reference:

QUESTION 52
A customer's initial backup capacity of 1TB, the average daily data increment of 10G, backup strategy is once a week, all the equipment once a day from Tuesday to Sunday.
Difference in reserve, all reserve and additional backup data are stored for 4 weeks, regardless of deduplication / redundancy ratio / replication, etc. Please calculate the required back-end.
The capacity should not be less than _____. This 1TB is calculated according to 1000G

A. 4940G

B. 4280G

C. 5940G

D. 5280G

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:

QUESTION 53
away from Which of the following description is correct about simpana backup software snapshot? (Multiple choice.)

A. Pause the app before the snapshot, go to the hardware storage snapshot to trigger a common snapshot with application consistency.

B. Backup software snapshot function can automatically find the storage volume of the file system, database, mail system.

C. Background snapshots can be indexed to ensure application recovery and small particle recovery.

D. Snapshots backup can be offline, the backup server almost has no impact.

Correct Answer: ABCD
Section: (none)
Explanation

Explanation/Reference:

QUESTION 54
When planning dual-active disaster recovery solution, the business end adopts the cluster application. Which of the following clusters is the application cluster?

A. mSCS
B. Oracle RAC
C. HACMP
D. SQL server

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:

QUESTION 55
Which of the following is correct about Huawei OceanStor v3 unified storage system? (Multiple choice.)

A. Standalone SAN engine and stand-alone file engine
B. Parallel dual-stack by way of parallel support (SAN) and file system (NAS)
C. Use unified storage pool technology
D. file system can achieve deduplication data compression function

Correct Answer: BCD
Section: (none)
Explanation
Explanation/Reference:

QUESTION 56

Disaster recovery project information research mainly includes information about who what why three. What is the following information background? (multiple choice)

A. A bank has more than XX customers and XX corporate customers.
B. Data loss will be huge and business disruption may result in significant financial loss.
C. Business interruption has a huge impact, and the interruption time in business deployment is less than 2 hours.
D. Clients want to build two live-action data centers in the same city to realize the key business activities such as RTO 2.

Correct Answer: CD
Section: (none)
Explanation

Explanation/Reference:

QUESTION 57
An enterprise buys a set of Huawei OceanStor 9000 storage. Some of the enterprise's basic software is stored in a directory, and users can access this **enjoy/it**. In order to facilitate the operation, when asked to access do not enter the account password, as when engineers do this operation, the basic software directory is set to a total of NFS **enjoy,** and check the share of the "guest enabled" option.

A. True
B. False

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:
NFS does not have guest users this option.

QUESTION 58
In preparation for disaster recovery design, what is the description of the right side.

A. Use the same type of disk as the master
B. Raid set the same as the master
C. The capacity of Lun and primary LUN is the same
D. Use the same amount of disks as the master

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:

QUESTION 59
Which statement about the RMAN restore and restore is wrong?

A. Restore (restore) refers to the previously generated backup set, get one or more objects, and then set to restore these objects.
B. Recovery (recovery) is a database that is consistent with the given point in time to ensure that this database can be opened.
C. Usually restored content lags behind the latest database SCN, so you need to ensure consistency through the restoration of the database.
D. For the restored data files can be archived logs and online logs to complete the recovery.

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:

QUESTION 60
Huawei Oceanstor 9000 provides a single file system to the outside through the unified file system namespace management. Which of the following description is correct? (Multiple choice.)

A. The namespace is automatically created when HUAWEI OceanStor 9000 is started with the same name as the system namespace.
B. Namespaces as the root directory of the entire system can not be shared and visited, only if ask the subdirectories below it can be shared and visited.

C. A unified namespace provide users with a unified storage resource pool to achieve the centralized management of storage space and distribution.

D. Each file share directory is a subdirectory of the namespace.

Correct Answer: ACD
Section: (none)
Explanation

Explanation/Reference:

QUESTION 61

What are the several recovery mode drills of Huawei Replication Director disaster recovery?
(Multiple choice.)

A. Planned Migration

B. Failover

C. Business Recovery

D. fault recovery

Correct Answer: AD
Section: (none)
Explanation

Explanation/Reference:

QUESTION 62

Which of the following feature is correct about the OceanStor V3 volume mirroring? (Multiple choice.)

A. After creating a mirrored volume for a normal LUN, the server read-write IO results in a change as a result of internal information exchange.

B. The amount of data actually stored on a LUN is 2G, the total copy of the data is 4G. A volume image is created for the LUN, the LUN is mirrored when the copy is generated during system creation.

C. You can configure a volume mirror for external LUNs or configure external LUNs as mirror copies.

D. When configuring volume mirroring, mirror copies are required from different disk domains.

Correct Answer: CD
Section: (none)
Explanation

Explanation/Reference:
QUESTION 63
Using non-deduplication storage based on the disk library strategy, data recovery fails after the data life of the backup has expired:

A. Client corresponding partition insufficient space
B. Client One or more simpana services are not started
C. The storage policy checked enable managed disk space for disk library option, leading to the disk's thresholds from the effectively managed disk space.
D. The client is abnormal with cs or MA communication.

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:

QUESTION 64
What are the design information research activities in the backup solution? (Multiple choice.)

A. Customer needs collection and refining
B. Backup capacity calculation
C. Project background research
D. Network environment is collected

Correct Answer: ACD
Section: (none)
Explanation

Explanation/Reference:

QUESTION 65
What are the ways of load balance cluster software in the most basic functions, the load balancing on Oracle rac? (Multiple choice.)

A. Client Balance
B. Cluster nodes balanced
C. Service layer balance

D. Instance load
Correct Answer: AC
Section: (none)
Explanation

Explanation/Reference:

QUESTION 66
In the scenario of protecting the database, the slave uses the virtual snapshot method to verify the services of the production end and the DR-side and discover the data of the DR on the disaster recovery end. What are the possible reasons that the library can not start normally? (Multiple choice.)

A. After a snapshot of the LUN of the redundancy site is created, the snapshot is not activated at the same time.
B. Disaster recovery side of the data stored in the cache, not yet written to the hard disk.
C. When creating a snapshot on the disaster recovery end LUN, the production end is copying data to the disaster recovery end.
D. The production end and disaster recovery end adopt the disaster recovery solution of incremental LUN copy, and the incremental data link is abnormal during the synchronization.

Correct Answer: ACD
Section: (none)
Explanation

Explanation/Reference:

QUESTION 67
The OceanStor V3 storage system has 96 hard disks in one hard disk domain. To maximize the performance of the hard disk, it is recommended to use the LUNs in the hard disk domain.
The total number of **hard disks** is not less than:

A. 96 B.
4
C. 32
D. 12

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:

QUESTION 68
Which of the following statements about multi-planar system design of Huawei Oceanstor unified storage system is correct?

A. The service plane uses GE channels for data transmission.
B. The service plane connects the host IO channel, disk IO channel and GE switching channel.
C. Plane redundancy between each other, when the business plane fails, allowing the use of control plane transmission services.
D. When the GE switch channel fails, you can use the PCIe switch channel as a backup data transmission channel.

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:

QUESTION 69
If the main service is normal in the simpana-based backup solution, view the following log:

A. CVMA. log
B. CVNetcheck. log
C. CVService. log
D. CVD. Log

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:

QUESTION 70
Which of the following statement about RAID 2.0 is correct? (Multiple choice.)

A. The hard disk is divided into chunk.
B. Lun consists of extend or grain

C. A CKG chunk may come from the same hard disk.

D. Chunk in a CKG may come from a different storage pool.

Correct Answer: AB
Section: (none)
Explanation

Explanation/Reference:

QUESTION 71
Huawei Oceanstor backup solution integration program is one machine.

A. True

B. False

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:

QUESTION 72
Huawei OceanStor 18000 engine, SVP, disk enclosure, and PCIe switch interconnection must be in accordance with certain rules and order. Which of the following statement is incorrect?

A. The SVP needs to connect multiple engines through two PCI-e switches, and each engine's controller needs to be connected to a PCIe switch to ensure that the link redundancy provides reliability.

B. When the control plane is connected to the network, when the engine and the PCIe switch are interconnected, the port P0 of the A3 slot and the PCI switch PCI port can be used pick up.

C. Huawei OceanStor 18000 can be used to install SAS interface modules and interconnect disk enclosures in slot 0 and slot 5 of the Huawei OceanStor 18000.

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:

QUESTION 73
A site data volume of 600GB, **A, B** site replication bandwidth between 40% of GE network resources, asynchronous remote replication synchronization type settings. Timing for the beginning of synchronization is 180 minutes, 9:00 AM initial synchronization of data. When will the next time synchronization start?

A. 10:25
B. 12:00
C. 15:00
D. 15:20

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:

QUESTION 74
In an OceanStor V3 series storage array, all the snapshots of a LUN occupy not more space than that of the LUN.

A. True
B. False

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:

QUESTION 75
In order to verify the consistency of the slave LUN data with the source data and to protect slave LUN data, which of the following description is incorrect:

A. Create a virtual snapshot of the slave LUN and activate it, then map the snapshot LUN to the host for authentication.
B. After the snapshot LUN is mapped to the host, the host can read and write the snapshot LUN.
C. After the verification is completed, stop the upper-layer service application, release the LUN mapping, and finally delete the snapshot.
D. Stop the snapshot before the host can write snapshot LUN.

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:

QUESTION 76
During the migration of SAN storage by LVM from AIX, the data migration designer is in a very important stage. Prior to accessing new devices, there are a number of issues that needs to be considered to help with data migration design, including: (Multiple choice.)

A. This device can not / should not be connected to an existing SAN.
B. AIX system how to connect to the new storage device.
C. How AIX systems and data can be migrated from the old disk to the new disk.
D. The format of the file system, whether the file group is compatible with the new device volume.

Correct Answer: ABC
Section: (none)
Explanation

Explanation/Reference:

QUESTION 77
Which of the following describes the correct process of disaster recovery and Huawei disaster recovery solution?

A. The disaster recovery side to create a snapshot
   Map the snapshot to the disaster recovery host
   Disaster Recovery Host scans the disk
   Start disaster recovery application

Test disaster recovery applications

B. Forcibly switch the replication relationship
    Map lun
    Start disaster recovery application
    Test application started successfully
    Resume production business

C. Stop production application and dismiss the host mapping Switch the replication relationship
    Map lun
    Start disaster recovery application
    Test application started successfully

D. Release the host mappingSwitch the replication relationship
    Map lun
    Start disaster recovery application
    Test application started successfully

Correct Answer: B
Section: (none)

QUESTION 78
Simpana client failed to perform backup task, view the task status, reported the following error: libary mediaagent drive pool
media []: Mount path is offlline advice: please check if the mount path is online and accessible " What can cause this?

A. Client offline
B. Media Server Offline
C. The client can not resolve the media server host name
D. backup media failure

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:

QUESTION 79
In simpana backup software, incremental backup means _____.

A. The data that has changed since the last backup is backed up.
B. Changed data backup since last full backup.
C. Full backup of all data.
D. After the initial backup data backup of all data.

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:

QUESTION 80
Simpana remote deduplication, when the data from the source to the target end of the process, the source of the data block is transmitted with first hash ratio. There is no need to transfer any data if the block was previously transmitted.

A. True
B. False

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:

QUESTION 81
By which of the following technologies can vmware VDI reduce the storage space used by the virtual desktop system?

A. View storage accelerator (VSA)
B. Persona management
C. Link cloning
D. SE sparse virtual disk

Correct Answer: CD

Section: (none)
Explanation

Explanation/Reference:
QUESTION 82
If a customer needs to install the simpana file system, backup client on the production system server and proceeds the following Backup and recovery operations, which of the following configuration is essential? (Multiple choice.)

A. In the backup client **Tianjin ah master** server resolution.
B. Add a resolution of the media server on the backup client.
C. When the master server adds the resolution of the backup client.
D. Add a resolution of the storage media to the media server.

Correct Answer: ABC
Section: (none)
Explanation

Explanation/Reference:

QUESTION 83
Users use vsphere 5.5 build business virtualization, in the course of the operation found that a host using too many SCSI reservations lead to other server access the same user leading to vmfs performance degradation. What method can be used to eliminate the root cause of SCSI reservation conflicts? (Multiple choice.)

A. Reduce the number of snapshots.
B. Reduce the number of virtual machines per LUN.
C. Increase the number of LUNs and limit the number of hosts accessing the same LUN.
D. Change the type of virtual disk created.

Correct Answer: ABC

QUESTION 92
RAID2.0 has the natural advantage of supporting the smart tier, to accelerate the performance of hot data. Which of the following surface description about the smart tier performance is correct?

A. When smart LUNs act as backup media, smart tier's performance improvement on this LUN is not obvious.

B. During the running of the business, the extent size can be adjusted by the size of the hotspot area to obtain better performance.

C. Literacy ratio in the 1:9 scenario, enabling the smart tier has greatly improved the performance of the business.

D. Smart tier has no effect on host performance during hot data migration.

Correct Answer: A

QUESTION 93
In the OceanStor 18000 storage system, a 15K RPM SAS disk is used. Assuming that the average seek latency of this type of disk is 6 ms. This type of disk can provide a single disk IOPS.

A. 100
B. 150
C. 125
D. 167

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:

QUESTION 98
A user configures Huawei OceanStor 9000 as follows:
1. Create a user group group01, group01 in the directory / home / group01 configuration like:
Recommended threshold: 10GB, software threshold: 15GB, grace period 10 days hard threshold 20GB
2. Create user user01 in the user group group01. The configuration of the user user01 in the directory / home / group01 is as follows: The recommended threshold is 8GB
Software threshold 18GB
Grace period of 15 days
Hard threshold 25GB
The quota that user01 is in the directory / home / group01 is:

A. Recommended threshold 10GB
    Software threshold 15GB
    Grace time 10 days
    Hard threshold 20GB

B. Recommended threshold 10GB
    Software threshold 18GB
    Grace time 10 days
    Hard threshold 20GB

C. Recommended threshold 10GB
    Software threshold 15GB
    Grace time 15 days
    Hard threshold 20GB

D. Recommended threshold 8GB
    Software threshold 15GB
    Grace time 10 days
    Hard threshold 20GB

QUESTION 109
A research unit purchased a Huawei Oceanstor 9000 storage products, the main configuration products: 8 * Oceanstor 9000 C node, the front end 10GE * 2, CE6850 switch * 2, S5700 switch * 1, cables, lighting and other accessories are fully furnished, households communication deployment program, prepared in advance a list of IP planning programs and IP requirements. Which of the following IP address is needed? (Multiple choice.)

A. The customer needs to provide 16 IP addresses for Oceanstor 9000 system back-end IP and need to provide a gateway.
B. Customers need to provide nine management network IP addresses, of which eight for IPMI management, one for OM management.

C. The customer management network must be interoperable with the OceanStor 9000 InfoEqualize DNS IP to access the OceanStor 9000 storage.
D. The client needs to provide 49 IP addresses that can interoperate with client applications, 16 for the static front end, 32 for the dynamic front end, 1 for InfoWqualizer DNS IP.

QUESTION 111
In a media application scenario, large files is an important application feature. Huawei OceanStor 9000 can allocate different configurations according to different users. This avoids some of the unimportant data transition overhead, which of the following description of the quota is correct?

A. The types of quotas include capacity quota and file quota.
B. Quota methods include calculating quotas, soft quotas and mandatory quotas.
C. The system pre-allocates quotas for files before writing the file. When the user cancels the writing of the file being written, the system does not release a preallocated quota.
D. When the user continues to write data, the quota information has been used in the InfoAllocator interface real-time updates.
Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:

QUESTION 112
Set the soft quota and hard quota using the OceanStor V3 file system quota feature. During each IO writing operation, consumption of space capacity, if the number of files exceeds the soft quota is the first to be checked.

A. True
B. False

QUESTION 114
Which of the following description of the infoLocker feature of Huawei's Ocenastor 9000 is incorrect?
A. To prevent changes in the directory or file protection time because of the changes in cluster time, a directory or file is configured with WORM attributes. After the directory or file will use the WORM clock to time, set the WORM clock. When the system will be based on the clock, user's file will not be modified over the protection period.

B. If the cluster time is earlier than the WORM clock, the WORM clock will be chased every hour for up to 138 seconds to adjust. If the cluster is after the WORM clock, the WORM clock adjusts to the cluster time.

C. When a directory is configured as a WORM root directory, all subdirectories, new directories and new files in the directory automatically get the parent directory of WORM attributes. These attribute parameters can only be configured when the WORM root directory is set. Only then the user's view can not be modified.

D. WORM logs are used to record the logs related to WORM operations and record them according to the time. The monthly log is a file that can be modified and can delete the file.

Explanation/Reference:

QUESTION 119
The OceanStor 18000 system used by a client business application has a total of three pools, each of which is a 9-disk RAID5. Someday analyzing the log of business interruption, we found that there are some scenarios in the system that caused the failure. What will cause the host access to the stored business in the following scenario? (Multiple choice.)

A. In the fully redundant group environment, occurred the master reset.
B. With the BST (bad track) feature turned off, a BST bad track appears on the LUN.
C. The POOL where the business is located is all thin LUN and not a snapshot. LUN copy, clone and copy services are configured in the log POOL, which is a space full of print information.
D. Log in the following print:
   2014-01-19 08:04:40} {Receive a disk-fault event of the disk (328) of pool (2) from ctrl.}
   2014-01-19 08:40:35} {Receive a disk-fault event of the disk (613) of pool (3) from ctrl.}

QUESTION 128

Existing set customer of database uses a raw device, due to the large amount of data in the database. The customer plans to replace the old storage with new storage devices.

In the process of environmental inspection lvcb engineers found the following:

#getlvcb -TA sjklv

Intrapolicy =

copies = 0
interpolicy =
lvid =
lvname = label = machine
id = number lps = 0
relocatable = strict =
stripe width = 0 stripe size
in exponent = 0 type =
upperbound = 0 fs = time
created = time modified =

As the vg is too large, the expansion of vg is impossible. As the service window is very short, and customers do not want to avoid the risk of large adjustments of the whole original environment, what is the recommended approach?

A. Based on lvcb offset reconstruction nude equipment, and the database level 0 backup import
B. Use the dd command for data migration
C. Use the cplv command for data migration
D. Use migratepv for data migration

QUESTION 139
Which description of the the OceanStor V3 file system snapshot feature is wrong?

A. In File System Snapshot when you create a snapshot, you simply copy the root of the file system and save it to form a snapshot of the file system.
B. Deletion Snapshots use a mechanism for reclaiming space, so snapshot data space is immediately freed after snapshots have been deleted.
C. After creating a snapshot in the File System, as the main file system is continuously updated, the original data block will gradually become the space occupied by this quick debt. However, a newly written data will not be included in the snapshot space.
D. File system snapshot data can not be deleted directly, and only after the snapshot has been deleted, this part of the space can be released.

Correct Answer: B

QUESTION 140
Which of the following description for Thin LUNs and Thick LUNs for OceaStor V3 storage is true?

A. Thin LUN and thick LUN can be configured with the same capacity.
B. Both thin LUN and thick LUN can make initial capacity allocations.
C. The maximum capacity of thin LUNs and thick LUNs can be greater than or equal to the available capacity of the storage pool where they reside.
D. Both thin LUNs and thick LUNs can be created in bulk.
