Which User-ID method maps IP addresses to usernames for users connecting through an 802.1x-enabled wireless network device that has no native integration with PAN-OS® software?

<https://vceplus.com/>

- A. XML API
- B. Port Mapping
- C. Client Probing
- D. Server Monitoring

Correct Answer: A

Section: (none)

Explanation

Explanation:

Captive Portal and the other standard user mapping methods might not work for certain types of user access. For example, the standard methods cannot add mappings of users connecting from a third-party VPN solution or users connecting to a 802.1x-enabled wireless network. For such cases, you can use the PAN-OS XML API to capture login events and send them to the PAN-OS integrated User-ID agent

A Security policy rule is configured with a Vulnerability Protection Profile and an action of 'Deny'.

Which action will this cause configuration on the matched traffic?

- A. The configuration is invalid. The Profile Settings section will be grayed out when the Action is set to "Deny".
- B. The configuration will allow the matched session unless a vulnerability signature is detected. The "Deny" action will supersede the per-severity defined actions defined in the associated Vulnerability Protection Profile.
- C. The configuration is invalid. It will cause the firewall to skip this Security policy rule. A warning will be displayed during a commit.
